Here is a link to [the audio narration of this mind bending work.](#) (4 Hrs 44 min)

A note from the author:

This article is written in **solidarity** and for the sake of those who have experienced a situation where hopelessness is a step up. In such a situation you may happen to contemplate that, "committing one final act of violence against self will end all others' acts of violence upon self." But let me tell you, this is simply not feasible. Such an act of suicide borne from [haplessness,] self-loathing, rage or complete breakdown will only render you marooned in this cruel and wretched realm, for eternity.

When you find yourself or your life shattered into bits and pieces, go ahead and pick up any such piece that feels light enough, to carry forward without a sense of burden, and let it grow. Let it grow and take flight, so that you may deservedly retire to a sublime abode, in peace, dignity and honor.

When we empathize with someone
and take a responsibility on their behalf
we gain **solidarity** with them.

Legend for Links

Cream highlight - Yet another document or a meme with original or remixed content.

Yellow highlight - The main themes of the article, containing the link, better explained by someone else.

Green highlight with white text - An opportunity to take a small step or a giant leap into the deep end.

One might observe that this overall artwork aims for quantity instead of quality but terrific quantity has a certain *qualia* to, as well as, in and of itself.

Following a link can lead into an undersea cave network of mixed-media-art full of discord and chagrin for supporters of colonialism, but also a few key treasures for supporters of ecological wellness.

DO PANIC!

Wars

During the summer of 2003, a fleet admiral had asked me, "why do wars happen?"

My first impulse was the thought that wars happen for any reason including no reason. But I didn't say that out loud. I kept silent because just as I was about to say something, a feeling of humility and a mental block came over me. The question was sincere and very profound. Even before I could utter a word I recognized that my life experience and studies were insufficient to even begin to answer such a question.

That question still nags at me every now and then. It even prompted me to put aside a commissioned military career and take up industrial engineering with a focus on cognitive science. I wanted to figure out what makes human beings tick and why would we even bother to wage wars. What makes innocuous things balloon to commercial, industrial or military scale? All wars seem tedious and futile. So why is most of human history only about [wars](#)? I have spent all of my adult life and close to 20 years trying to answer such basic questions.

At present day, finally, from my more arduous and meticulous explorations into anthropic affairs, I can testify that as human beings we are adept at:

1. Fucking eachother,
2. Fucking with eachother and,
3. Fucking eachother over! [Or fucking up, eachother.]

The only ones who reject all these basic human behaviours are zeroth order fools and village idiots, who habitually choose none of the given options. But why are almost all of us so adept at such fuckery?

I believe that saying, "waging wars is a natural and intrinsic human tendency, or an inherent part of our earthly tenancy" is just a copout. Only uneducated cretins say things like, "survival of the fittest is a natural law." The fittest in this world, regardless of physical form, don't need to kill or be killed as they become appropriately self-confident, mature, brave and strong enough to stop lying to themselves. The fittest and most intellectually superior beings also become the most nurturing of all species and genuses, like fruit bearing trees. And, the fittest entities in nature are a force of nature, that cultivate a conscience to avert wars and pollution on Earth!

Battling and warring is definitely for the uncivilized. But, supposedly, civilizations cannot come into existence nor evolve towards "the greater good" without genocidal activities.

So for starters let's consider a few generic reasons for a more localized case of conflicts that aren't at the scale and magnitude of a war. Something much smaller than a battle, like a neighbourhood quarrel or even smaller - a household quibble. After finding some basic reasons for conflicts that result in bloodshed, we can explore if those reasons can be scaled up using marketing (propaganda) and sustained business

financing (racketeering) to constitute a war. In doing so we can explore how easy or difficult it is to lean into a war to propagate it or possibly avert one through simple abstinence and non-violence.

Spoiler alert - not even celeb monks can abstain from fucking each other over, using covert tricks and mystery hacks.

DIY and Homebrewed

An adage or an old saying in India, among Hindi speaking people, is that, "women, jewelry and inheritance are the likely sources of a bloody conflict." In a more subtle sense, it seems to indicate that only men bother to kill during a fight, whatever may have been the reason for its eruption. But, I think women and nonbinary gendered individuals could also be killers, given that the proverb alludes to lust, greed and covetousness as the basic motives and essential reasons for bloodshed.

So logically any person would merely need to get rid of feelings driven by lust, greed and covetousness to avoid gruesome fights. Any society or household only needs to do so little as promote a culture of avoiding such feelings. We have of course come to discover that doing this is practically impossible. But why?

Asking why a few consecutive times lends to root cause analysis. However, asking why more than a few times leads to derangement with answers like, "I am the originator and annihilator of a deterministic universe", or "Aham Brahma asmi", or "An'Al-Haq."

So, only ask why four or five consecutive times and avoid devolving into some tragic version of self-deceit, and self-centered conceit.

Now let us come back to the topic of greed and its indelible contribution to human evolution. I do believe that greed is not a bad thing as long as a person can figure out what is worth being greedy for. Preserving basic human dignity without prejudice against others seems like a thing worth being greedy for. A pollution free ecology with clean air, water and soil is totally worth being greedy for! And yet most people throughout the world managed to stray away from such worthwhile things. We instead became greedy for soot, asphalt, concrete and plastics. It appears that misguiding all of humanity away from clean energy, biodegradable materials, and recyclable alloys and glass was a little too easy for any so-called leader or lazy bureaucrat. Misleading people away from worthy options was done right away without a second thought to the future of humanity by "the individuals in charge" of civil and military affairs, in almost every country of the world by the 1900s.

Global citizens lacking basic healthcare and education, trapped in polluting jobs that further damage their neuroendocrine systems, allow for such people to become docile, castrated mules or mutts, who do not revolt against their treacherous and treasonous leaders. A population of placated and pacified dullards is certainly an easy way to avoid mutiny and civil wars.

Are pacifists genuinely nonviolent? In a home, school or office like setting, placid "pacifists" simply use passive aggressive tactics to hurt people as a hobby. Such pacifists aren't against the concept of antagonization, fighting, villainy or wars. They merely prefer more sly and crooked styles of attacks in gaining wealth. They may go around saying that they do not care for amassing political power, cult followers, fame and fortune. They may claim that their humble way of life forbids all boisterous forms of expression, especially arguing and fighting. They may even exclaim that being a vegetarian precludes them from killing beings that can feel pain. They are of course lying. Some of these people however do believe in such mottoes wholeheartedly. Those ones unfortunately get used, misused and abused by "pacifists" and non-pacifists alike.

By the way, [plants do feel pain](#) and they are not masochists.

Within any household or neighborhood a typical persona of a sadistic bully arises spontaneously. A bully is a person who happily exerts brute force to have their way with things. More often than not, such bullies are smooth talking pacifists who use the brute force technique of gossiping, not cooperating during critical moments of need by renegeing promises and in general, manipulating information flows. A violent and openly abusive bully is typically less of a hypocrite, more honest and more uniform in bullying people across the board than a passive aggressive one.

Whatever type of bully one may encounter, they all want the same thing, to have things done by other people for their exclusive profit, and in a style that glorifies their brand and personal ego. The bully gets to be the boss who decides what is afforded to whom, in terms of a role or station in life, and at [the predetermined] cost. Every facetious justification for why the bully gets to be a predatory and vampirical boss, is repeatedly drilled into the sheepish victims, until those justifications become the official, publicly accepted facts, norms, laws, rules, standards, procedures and basic truth.

Have you come across some of these justifications before? For instance, "the scarcity of resources necessitates that the fittest person [must] rule with an iron fist, to preserve what's morally good and [must] keep out depraved invaders from stealing those precious resources." Or something like, "tough love builds character!"

If any of those kinds of justifications were ever true, we couldn't have had a growing world population of such gargantuan proportions, still living off of those "scarce" resources that were supposed to have run out by the 1960s. There are [still so many reserves of fossil fuels available](#) that by the time we burn through all of them, we will end up covering the entire earth's surface with a meter of soot and asphalt. And, in that blighted world, will remain tar golems in the shape of humans, with "toughened characters of gold!"

The quantity of essential resources for sustaining life has never been scarce, only their distribution and access has been curtailed systematically to assert dominance over poor people.

Every bully's job is to prey on people's fear[s] and on their physical or emotional insecurities. Why are the rest of us with fewer insecurities then not able to stand up to a bully and gain freedom from tyranny? Genuine lack of strength is the simple answer. Whether it be a lack of physical strength from being [emaciated](#), or lack of emotional strength from constant barrage of insults that have degraded self-esteem, [the predator](#) gets away with atrocities like rape, murder, pogroms and other forms of exploitation by preventing the accumulation of strength among the poor.

So each person eventually settles on a role or station in life, where we willfully accept a level of sustained abuse from a local predator, while convincing ourselves that, "things could have been worse, we better be grateful for what we have."

Have you noticed that people who wouldn't ever be accommodated in hell, happen to be accommodated here on earth? We are at the bottom of hell's garbage chute and sewage tunnel! Things are already the worst case scenario for most people in the world. The most pressing issue among prevalent worse case scenarios is that [billions of people in the world will not get a vaccine for nCoV anytime within the next five years!](#) [This perspective was from April 2021, and is still valid in April 2022]

Economically poor teens and young adults are likely to be the majority of those billions of people, who will be asked to, "present sacrifice for the sake of the greater good!" What is the greater good over here? Is it keeping terminally ill elderly people alive, who are currently begging for assisted death, so that insurance companies and for-profit hospitals or nursing homes can continue to scam them?

You see, a fight at home and in our neighbourhoods is fought by wage earners, against profiteering corporations, stringently, everyday, and lost, pathetically, everyday.

This type of a fight never escalates to a war. There are sufficiently many buffers and information silos that prevent accumulation of strength among wage earners, who are busy begging for a mere \$0.75 increase in minimum wage. Beggars can't be choosers, and absolutely cannot become strong enough soldiers, warriors or champions. Not even in their fantasy or imagination!

However sometimes, just sometimes, a person sitting around at home makes an ordinary, do-it-yourself, improvised device called a molotov cocktail, to start a tiny little riot.

Imported and Exported

Welcome! Welcome to a revolting world, with its rites of passage, for acquiring a right, to rebel and riot.

When you see a [million residents, fighting tooth and nail](#), with improvised weapons against heavily armed and well trained military goons, the situation is not supposed to be underestimated or downplayed, by calling it "a protest." The situation is called a civil war battle, when the remaining one million local residents are elderly, children and infants, who couldn't come out onto the streets to fight, but had to witness **all** of their able bodied family members, go out and fight to death against riflemen, with bare fists.

Occupy Central protester

Occupy Central protesters have drawn attention worldwide for their non-violent behaviour and civility

Plastic goggles

To protect against tear gas

Surgical mask

Walkie-talkie

Protesters are very well organised and many of them use this way of communication

Adhesive tape

Widely used to hang posters with slogans

Yellow ribbon

Umbrella

The symbol of the Occupy Central protests protects against sun and rain as well as projectiles fired by police

Bridles

Widely used by protesters to bind and strengthen the stalls, awnings, banners, etc.

Holster Without pistol

Helmet

Usually bicycle or skateboard helmet to shield the head. Not all protesters carry them

Helmet

With visor and nape protection pad

S10 NBC respirator

Gas mask contains a canister filter and inner mask to reduce fogging of lenses

Federal M201-Z riot gun

Can fire a 38mm tear gas cartridge up to 300 metres

Ammunition bag

The situation in Hong Kong was full fledged civil war, by mid-2018. To understand this we must look at a more holistic view of Hong Kong. The issue of Hong Kong is steeped in [historical events](#) and is fairly complex, similar to any other region of the world that got screwed up by the British East India Company.

The British Empire modeled Hong Kong and Macau as a grey area market, where everything was up for grabs. When the British returned Hong Kong to China in 1997, its cultural and political make had become drastically different from that of mainland China. Moreover, Hong Kong remained a portal for British and American corporations to "interface" with the seemingly hard headed, unyielding and alien Chinese governments located in Shanghai and Taipei. The drastic difference in the sense of autonomy and fealty

that Hong Kongers have for themselves, compared to the motivations and outlook of Chinese central government loyalists, is the main source of friction between these state sized entities.

Understanding the dynamics between Hong Kong and China, as well as Hong Kong and the rest of the world, is worthwhile in recognizing similar issues across the world in [Southeast Asia, Central Asia, India, Middle East, Europe](#), various [African nations](#) and in the Americas.

The pogrom conducted in [Hong Kong between 2014 and 2018](#) by mainland Chinese forces is an issue of enormous size and scale. This issue has been downplayed by every news outlet around the world as a neighbourhood level riot, to rob credence and attention away from the legitimate concerns of Hong Kong's local ethnicities facing forced assimilation, into People's Republic of China's conception of "One Nation."

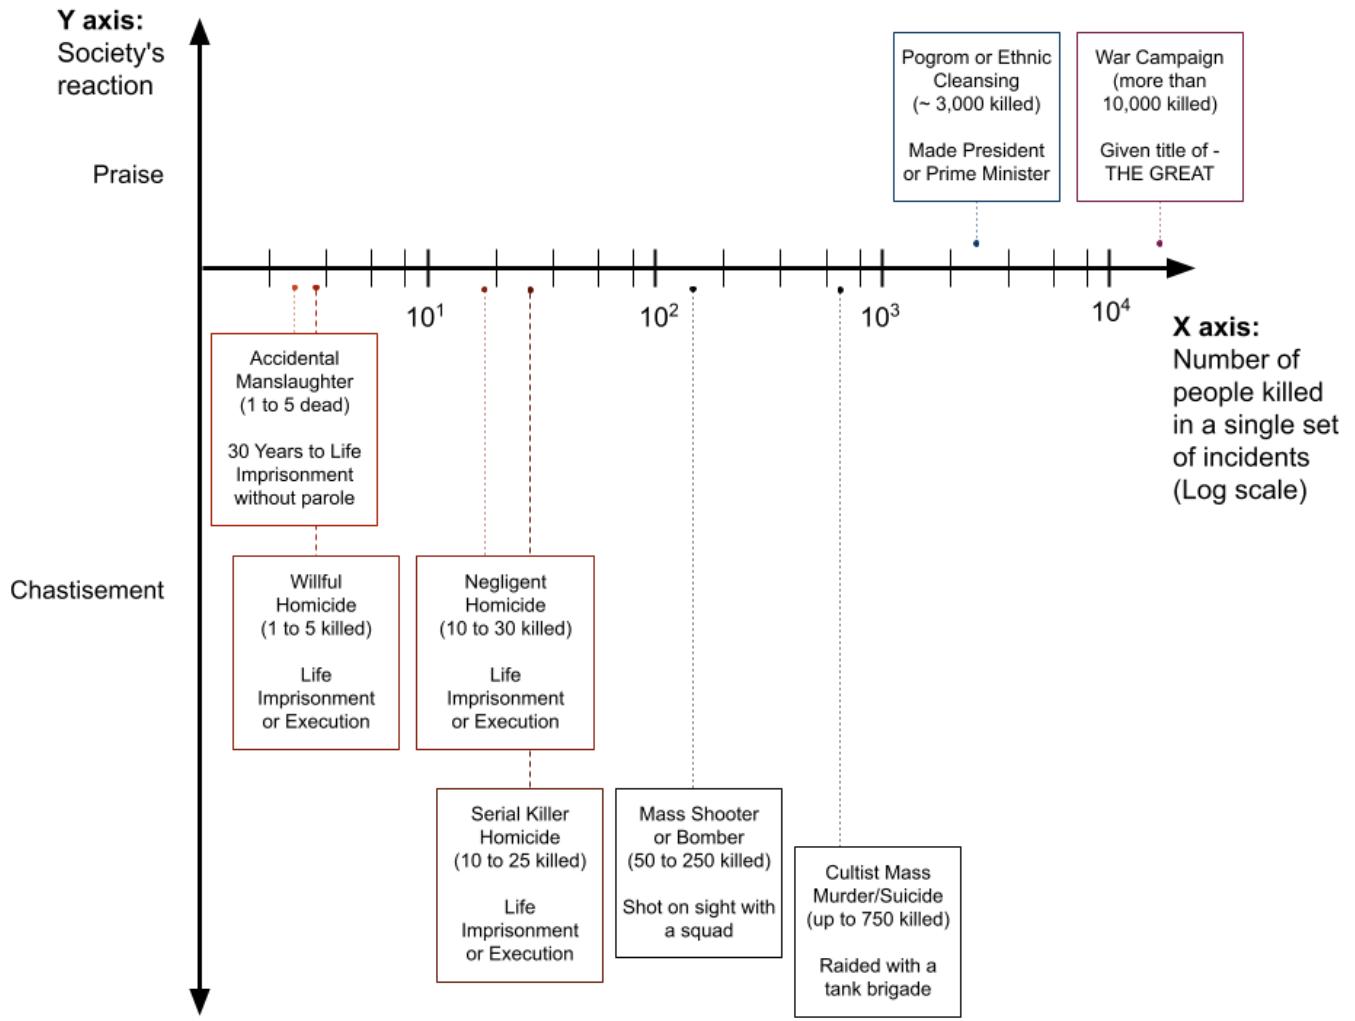

Is forced assimilation and destruction of everything you hold true, sacred, and beloved a sufficient reason to go to war? This should at least be a reason to put up a fight against hardline oppressors, shouldn't it? [Very true and relevant to the ongoing situation in the Russia-Ukraine war and crises.]

It is important to look at the events of the past decade surrounding Hong Kong, that include the emergence of Covid-19 pandemic, within the overall context of human evolution in this geographic region. The various periods of wars among kingdoms, fiefdoms and martial states in Eastern Asia [during the past 2000 years](#) have been demarcated by geological, linguistic, religious and philosophical differences among [various ethnicities, of the region](#) that is now called China.

Imagine a person you have never heard of, suddenly shows up with an army at your doorsteps, and declares themselves the new sovereign of the region you live in. This sovereign comes to dictate a new religion, linguistic script, dialect, cuisine, clothing, calendar, currency, laws, and [even a new hairstyle](#), for everyone to follow under the pains of death. If such a thing were to keep happening every decade or so, do you suppose that ordinary people would take up martial arts, from getting fed up of being raped, pillaged and plundered, over and over again?

Would the next community leader then, interested in propagating fiefdom, take such a self-motivated population, already enthusiastic about fighting and adopting a martial lifestyle, to the [next set of wars](#), only to restart the cycle of pain, horror, and hatred?

Somehow such a cycle seems to be the main thesis of every community, throughout the ages, in every part of this [forsaken world](#).

Crime and Punishment

The lesson here is to not bother killing less than a thousand people when you start to feel murderous.

How does someone even become such a martial leader in the first place, who can motivate conquest of various lands, through [pogroms](#) and [genocides](#)? More than weapons, supply lines and soldiers, a person needs the willingness to commit mass murder, in order to become such a "nationalistic and patriotic leader."

Mass murder can be committed in the name of god, political ideology, economic upliftment, or just basic "survival instinct." Whatever may be the reason, the first personal task, is to get rid of any moral, and ethical ambiguity, in killing large swaths of people. Simply get comfortable in being surrounded by death, and in orchestrating murder, by handing your weapon to your police, militia, or military. And, by handing your purse to your broker, insurance agency, or bank. You can then give these "companies" standing instructions and permission, to go ahead and systematically exterminate all "inferior, bizarre, uncivilized and unworthy people." Note that the use of words like [barbarians](#) or terrorists, is a standard way to dehumanise such people who are to be *killed*, so that their lands, women and resources can be pillaged and plundered.

So what do you do if you are on the receiving end of heinous brutality and mass extermination? How do you protect yourself and "your people?" Do you come up with mythologies, songs, and stories to educate your people on how to stay united against an oppressive force? Do you create a system of symbols,

allegories and analogies couched in everyday exchanges or activities, to reinforce such teachings, especially to children? But then, do all such things only create a deeply entrenched sense of "us versus them," loaded with vilification, xenophobia and hatred of anyone who is "different?" To overcome this issue, do you then try to homogenise the population through syncretism, in the name of creating unity and harmony, by erasing cultural differences, only to recreate the problems of forced assimilation, hazardous abrogation and cultural misappropriation?

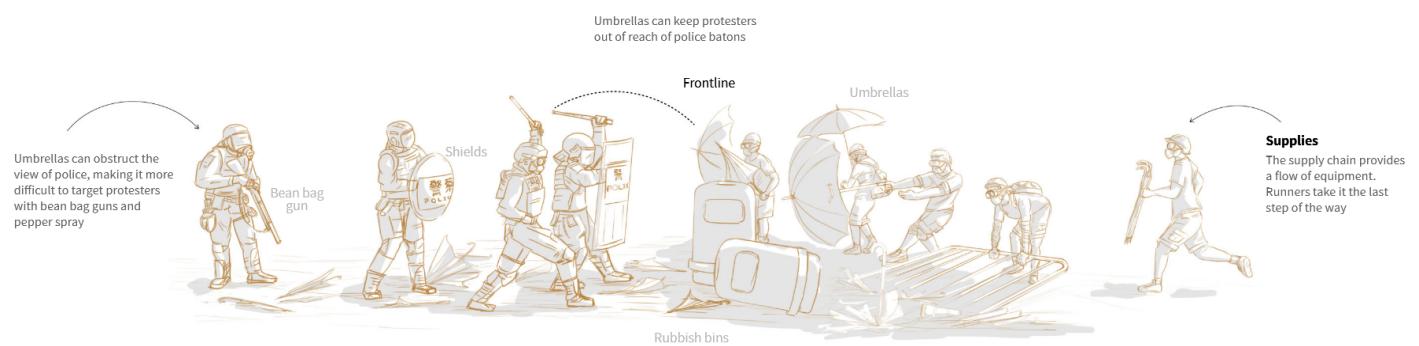

Ah yes! Such is the ping-pong of cultural dominance marred with religiosity in the name of transcendence, stuck in an infinite loop.

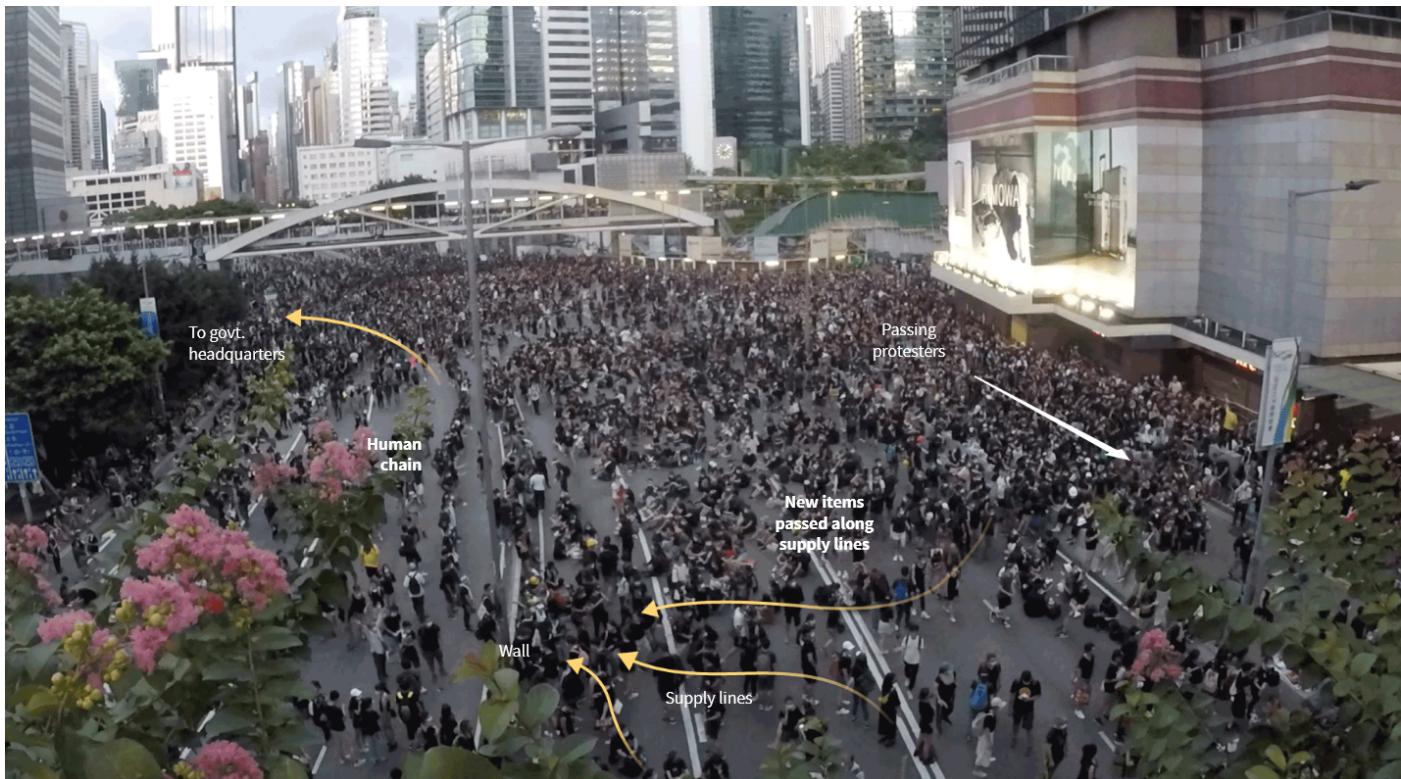

It is only natural that every cultural hero of one community was, or is, a cultural villain for another community. And such a hero (villain) is only used as a token or emblem, to promote the deep seated desires of each communal person, to become the dominant one, who can destroy others, *"at a time and place of their choosing."* This view of being able to harm, kill, or completely obliterate those that stand opposed to self, in any sense of the word opposed, seems to be the main psychological kernel to a sense of control and power, among the impoverished and poverty stricken souls of this world.

Indeed, for every petty quarrel or epic battle among any persons, the chosen time is always "now!" And the chosen place is always, "here!"

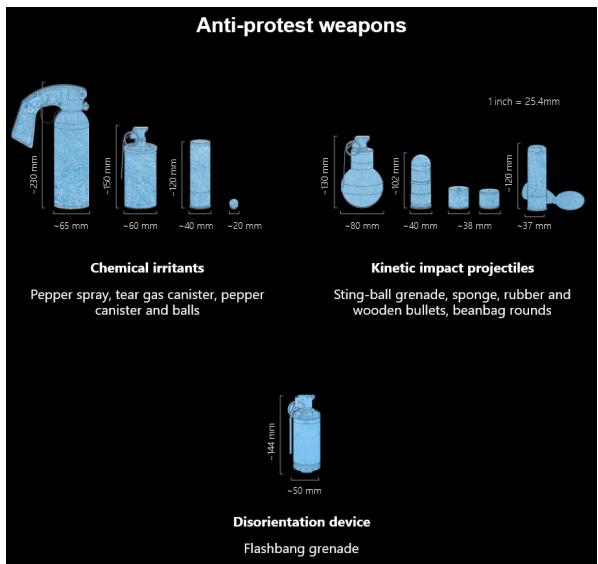

So it shouldn't come as a surprise that in 2019, people of Hong Kong, who were brought up watching Bruce Lee movies telling them to be like water, or Jackie Chan movies telling them to take something expected and do something unexpected with it, went ahead and used "*all options available at their disposal*" when fighting against the Chinese military. [Also true about Ukrainians right now, fighting against Russians.]

Mainland China had steadily exported their military personnel via Hunan to Guangzhou for replacing the Hong Kong Port Authority and Police. This hostile takeover of Hong Kong's core institutions was completed by mid-2019. The original Hong Kong Police were sidelined, and the Chinese military dressed up as regular police as well as riot police, started to make university students and activists in Hong Kong disappear.

July 1st, 2019, Hong Kong - [Coordinating chaos](#)

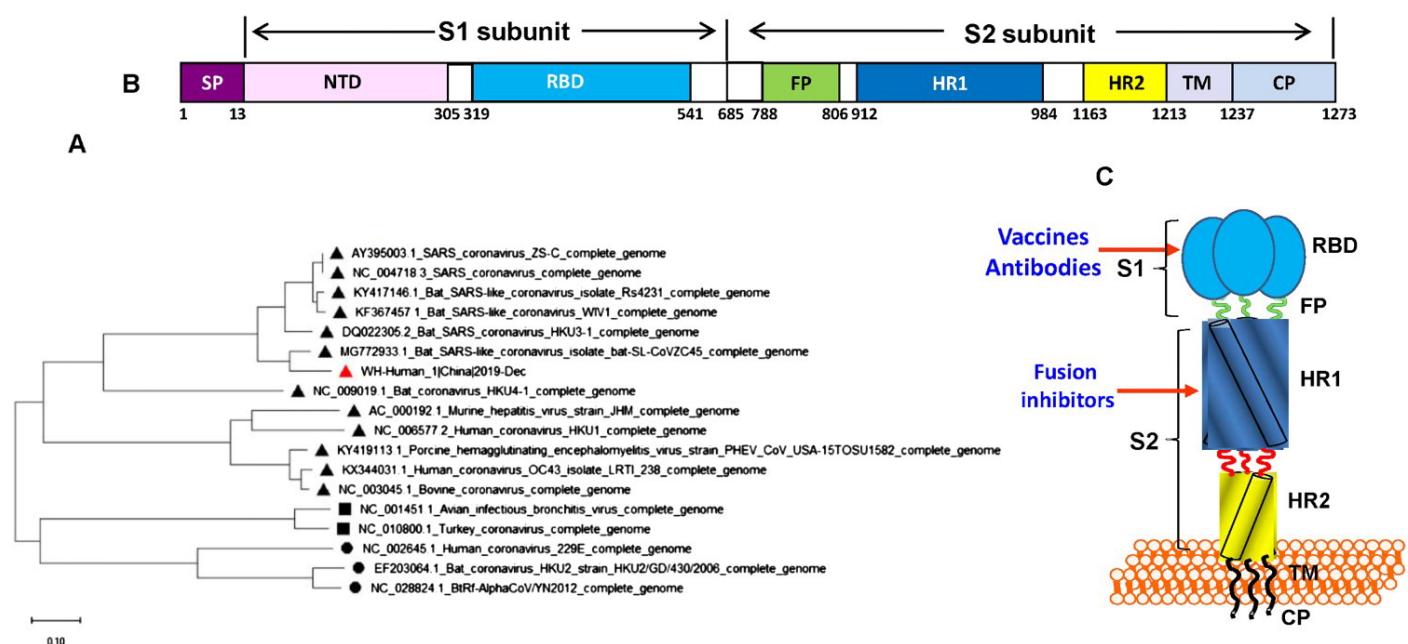

src: [reuters](#)

During August 2019, I had come across some "online chatter," about the Chinese government conducting sustained biochemical attacks against protestors starting in late-2018. The online forums and chat rooms discussing these incidents have now been completely wiped out. The content of those discussions were interesting, though hard to believe at the time. It was rumored that plain clothed Chinese government agents and paramilitary troops were spraying Hong Kong protesters with influenza and influenza like viruses, as a "non-lethal" intervention to stop the rioters. Pepper spray, tear gas shells, water cannons, sponge grenades, rubber bullets, bean bag bullets and directional acoustic waves were insufficient, in

quelling hundreds of thousands of protesters, the Chinese military had decided to take things to the next level using hazardous biochemicals, without otherwise appearing to generate an urban bloodbath, from live ammunition rounds.

Researchers from the [Hong Kong Polytechnic University](#) had started to collect sputum samples as early as February 2019. Particularly from October 2019 onwards, researchers from "State Key laboratories" of both mainland China and Hong Kong, were able to categorise strains of new corona viruses collected from protesters, who were suddenly falling ill with pneumonia. It was speculated that tear gas and other harmful forms of gaseous non-lethal weapons had caused scar tissue formation in the lungs of rioters, making them prone to pneumonia causing pathogens.

An extensive drive to collect samples throughout mainland China and Hong Kong supported the gene sequencing of Wuhan-Wu-1 virus ([locus MN908947, version 1](#)). This strain of the virus was so well understood by researchers in December 2019, with a prediction about its highly communicable nature among humans, that by 20th January 2020, a valid proposal for its vaccine was already published.

src: <https://doi.org/10.1080/22221751.2020.1723441>, full size image [here](#).

src: <https://ncbiinsights.ncbi.nlm.nih.gov/2020/01/13/novel-coronavirus/>

Newer versions of Wuhan-Wu-1, such as [locus MN908947, version 3](#), were also identified in January 2020, and published for the global scientific community. However, by this time, the flurry of research papers on the topic of coronavirus, completely muddled human ability to linguistically point to a specific Corona-19 virus. The pathogen's name started to change from, "the Wuhan seafood market pneumonia virus" to, "Severe acute respiratory syndrome coronavirus 2" (SARS-CoV-2).

The earliest scientifically verifiable genome sequence of novel-CoV-2 from Hunan, [locus NC_045512, version 2](#), was made available to microbiology researchers later in spring-2020, and ratified through peer review by July 2020.

These linguistic identifiers have been important and necessary for researchers making a vaccine, as well as in identifying how particular [strains were exported by unwitting travellers](#) from Wuhan, Hubei and Guangzhou provinces, to various international destinations around South China Sea, via Hong Kong.

Upon settling on a name and a genetic signature for the corona virus that could be tracked across geopolitical borders, the chore of distinguishing a pandemic from an epidemic finally started in February 2020. Due to such challenging reasons, the World Health Organization (WHO) took a mighty long time until mid-February 2020, to declare the spread of this virus as a pandemic. The delay occurred in warning countries to take precautions, even though various sea ports and airports in South Korea had already shut down, to mitigate the spread of "a mysterious airborne disease in South China Sea," by October 2019. The delay occurred in warning countries to take precautions, even though secure landline telephones, in almost

all countries with an embassy in China, started flying off the hook in November 2019 due to calls from diplomatic staff, pleading their family and friends in respective countries, to take cover and bunker down. The delay occurred in warning countries to take precautions, even though, an unprecedented number of private chartered airplanes suddenly took to the sky, in December 2019 from England, US and Canada to tax havens and safe houses in the Mediterranean, Caribbean, Iberian coastline and Indian Ocean because, these tycoons and business magnates were informed by market researchers that Milan as well as Paris had already fallen due to a global pandemic.

It was also very difficult to convince greedy overlords in Western Europe and [North America](#), to allow "lockdowns" in various [client states](#) and in their own countries. Luckily, Samsung corporation and Maersk Group had strong armed ports in Amsterdam to shut down indefinitely, starting from the last week of December 2019. However, sea ports and air ports of Singapore, Hong Kong, Manila, Jakarta, Sri Lanka and UAE were still very active in spring-2020. Following that, all major destinations of Cathay Pacific and DHL started reporting hundreds of cases per week. This number soon rocketed to thousands of cases per day, in countries like Italy, Spain, and Iran. The world finally admitted to a problem, and accepted the global crisis by the second week of March in 2020.

There are 200+ types of coronaviruses

Seven types are known to infect humans

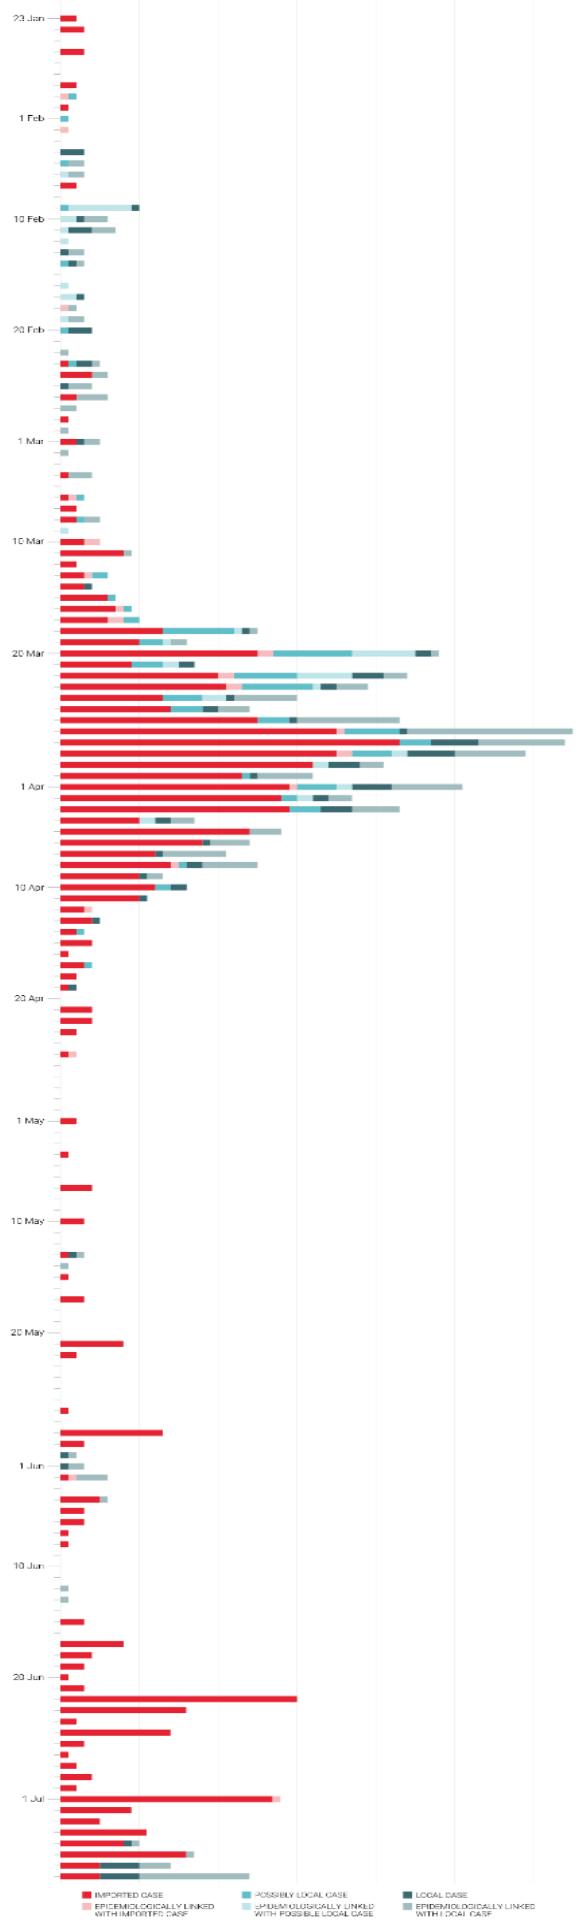

Four are endemic respiratory viruses that cause 15-30% of common cold infections each year

Two of these, SARS and MERS are considered epidemic

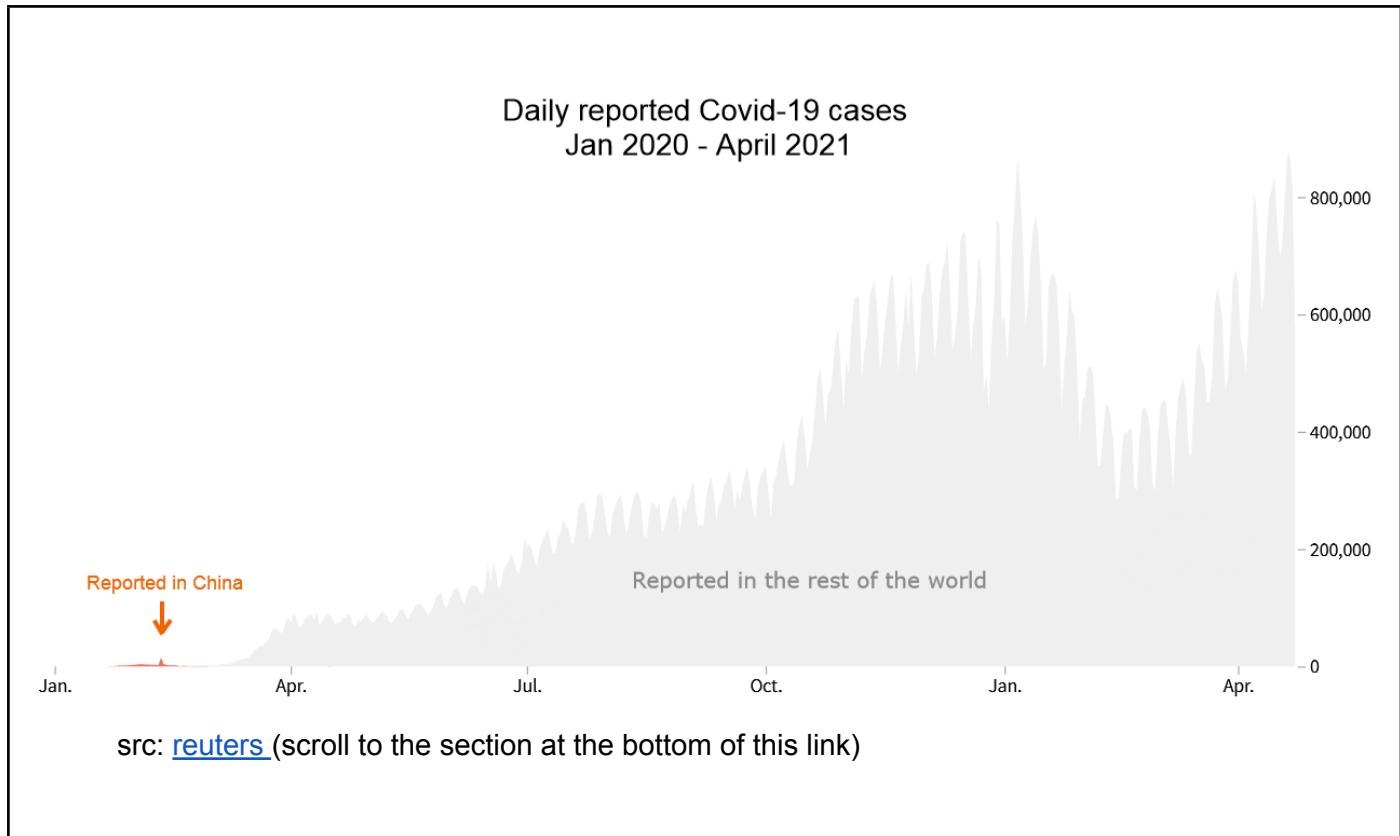

nCoV-2 is a new type of highly infectious coronavirus that is now pandemic (Covid-19)

How the cases spread

Daily new Covid-19 cases dropped into a single digits in Hong Kong on April 17. While most infections come from outside, the city can only be considered out of the woods after there are no local infections for 28 days, experts say.

src: [Decoding coronavirus covid-19 \(March 2020\)](#) and [Hong Kong coronavirus infected cases \(January to July 2020\)](#)

Mainland China

<1% of peak

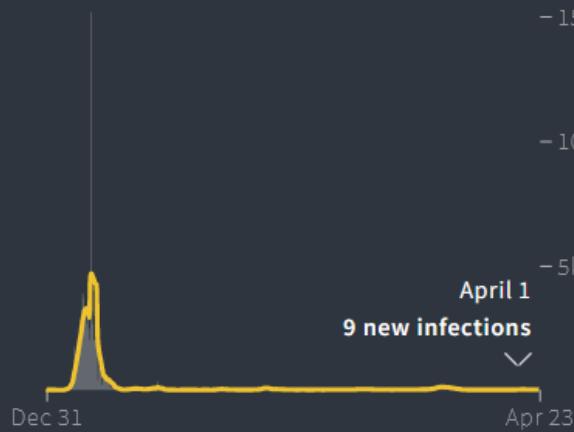

0

Updated 4:18 AM BST

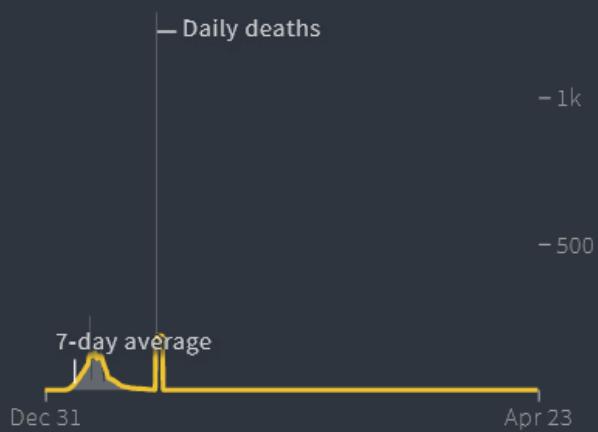

There have been **90,575** infections and **4,636** coronavirus-related deaths reported in the country since the pandemic began.

Daily reported trends

New infections

Deaths

Comparing daily averages for number of cases and deaths due to Covid-19 by April 23rd 2021

src: [reuters world coronavirus tracker and maps, countries - China](#)

As of 2021-04-23:

13.1 infection cases per day (average) in China compared to 297.6k in India and 61.6k in the U.S.

0 death cases per day (average) in China compared to 2.5k in Brazil and 1.9k in India.

How are such ridiculously low numbers possible in China, given that the pandemic originated there and that China is one of the world's most densely populated countries? Shouldn't these numbers be closer to that of a similar country like Brazil and India? What kind of wizardry did they use for practically eliminating coronavirus infections in China?

Obviously, these reported numbers about daily infection and deaths from coronavirus in China are seriously bullshit!

The media blackout on reporting Covid-19 cases from mainland China is incredibly astonishing! Most probably governments of other countries like India and US can only wish they had such strong cyberwarfare abilities like China in order to lie, completely fabricate a new "truth," and thoroughly mislead public opinion about ground reality. Of course, coronavirus does not give a crap about geopolitical boundaries and politically motivated lies of human beings, it is here to kill us no matter what silly stories we tell ourselves. Eventually, none of us will be able to ignore the towering heaps of dead bodies that can't be cremated or buried properly, due to a lack of resources to do so.

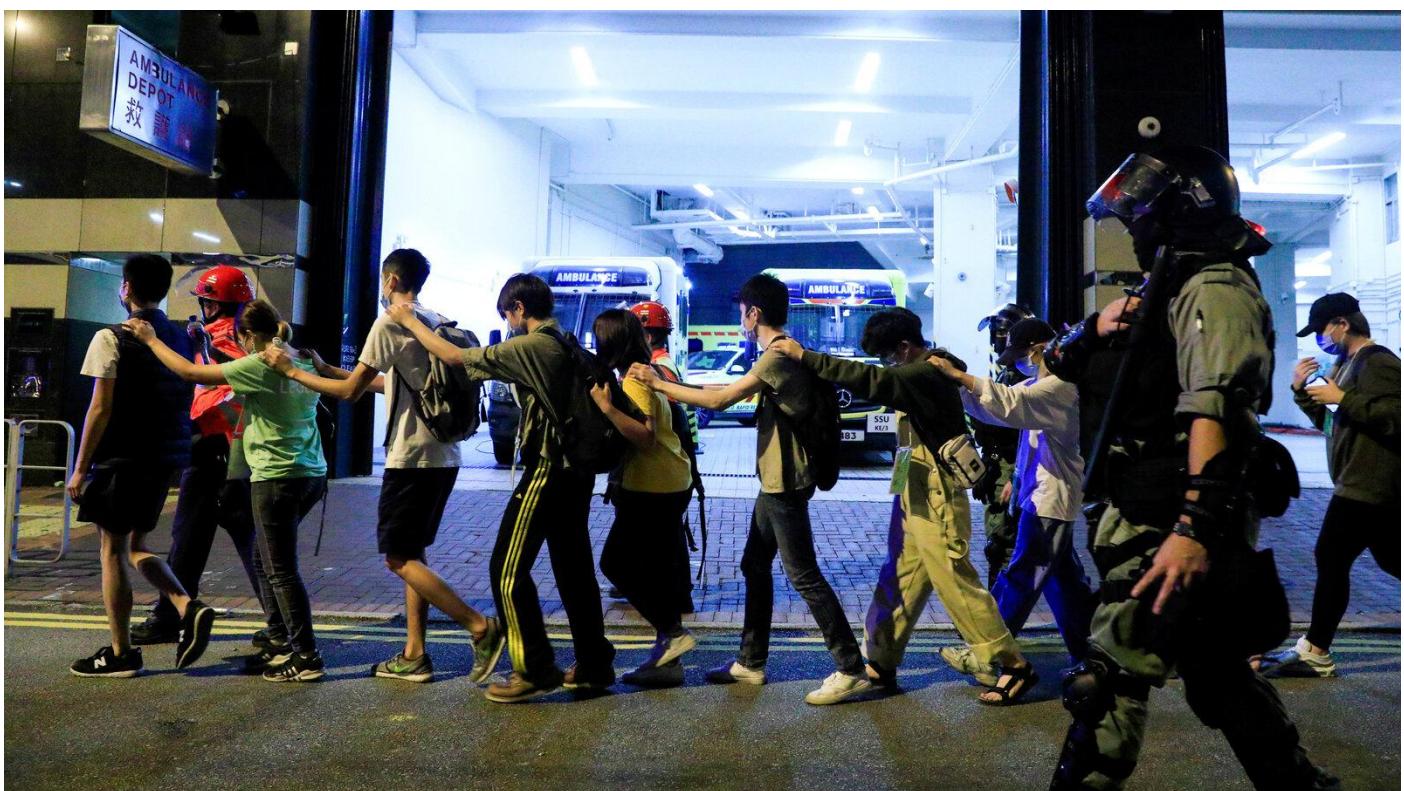

Also very importantly during that time period, on 17th November 2019, the Shanghai based rulers made a final push to take over Hong Kong. Thousands of students had already been arrested by force or submission upon being exhausted and smoked out. The remaining students who had decided to protect the truth with their lives, concerning biological weapons used against them, made their last stand in Hong Kong Polytechnic University. Their job was to prevent the mainland armed forces from getting to the biological samples and incubators containing viruses that were being sterilized and studied. A number of students lost their lives defending the databases during [the twelve day siege on their university grounds](#).

src: [scmp](#)

src: [the statesman](#) and [npr](#)

src: [npr](#)

src: [wikimedia](#), Hong Kong Polytechnic University entrance on 17-18th November 2019.

The final few dozen students left within [the Hong Kong Polytechnic University, on 18th November 2019](#), barricaded themselves in the main building behind a wall of fire, against hundreds of armed paramilitary troops.

The lethally armed conflict led the students to eventually surrender after suffering a number of casualties. But, before they surrendered, they dumped all of their research on mechanisms for creating lethal biological weapons into the dark web. They also leaked the research on SSL Certificate Authority certificates that was being carried out in their computer science and cryptography department, along with a repertoire of codes for digital viruses, and publications on computer security vulnerabilities of global internet service providers and telecom networks.

The besieged and dying students basically said, "if the world doesn't care about us and our plight, why should we care about the world?"

You and I will never come to know the names of those martyred students who were trying to save the world from a pandemic.

All that we can do, is to [watch them fall down](#)

src: [I have nothing to lose](#) and [Scorched Hong Kong Polytechnic University logo](#)

So perhaps, you can now understand that, *what goes around comes around*, much faster, and with greatly amplified consequences. Karma is a bitch; an accelerating and compounding, pandemic bitch!

Additionally, the global white-hat and grey-hat community had already spent years trying to protect Hong Kong students from being snatched away, and then unlawfully detained for months in various prisons on the outskirts of Guangzhou near Hunan. The whole point of the "[2019 Hong Kong Extradition Bill](#)" was to be able to take any marked persons away from Hong Kong, to a nondescript (blacksite) location within Chinese controlled territories. Do you see how the original Hong Kong Police and Bar Association were actually protecting people like college students and employees of Cathay Pacific, from getting frisked away to Chinese black-ops sites at the edges of *Cyberia*?

Sending political prisoners to Siberia is like the [most classical, autocratic thing to do](#).

For many years since 2014, the code-makers and code-breakers of Hong Kong, had known that beam-forming technology, used in 5G equipment, was essential to targeting individuals throughout the country, with active and passive electronic trackers, particularly via cell phones. It was too difficult to explain to ordinary citizens, that thwarting face and body recognition cameras requires - face masks, umbrellas, identical reflective clothing, and toppling of those equipment towers. Protesters eventually learned the importance of face masks, umbrellas and protective clothing in the context of tear gas shells and rubber bullets, but not in the context of cyber warfare tactics, involving 4G and 5G equipment.

Helmets

Umbrellas

Masks

Goggles

[Coordinating chaos](#), also wear pink pussyhats and reflective [yellow jackets](#)

The same cyber warfare issues had cropped up during the Arab Spring movement in various Arab nations and Turkey, Women's March movement with pussyhats in USA, as well as workers' rights movements in France. So spreading a [rumour that 5G equipment causes cancer or Covid-19](#) was an easy way to get stiff-necks to take down traffic camera poles, with those kinds of radio and surveillance equipment. After all, under such circumstances, lying is standard operating procedure.

"*When they turn that switch on, bye-bye mamma!*" Lulz.

Radio equipment for telecommunications do not have enough transmission power to affect tissue beyond the epithelial cells. Also, cancer causing ionizing radiation is not beamed by telephone towers or mobile

phones, not even at millimeter distance from skin. And these electro-mechanical things absolutely do not cause anyone to get a biological virus like Covid-19, nor do they spread any other biological pathogen using electromagnetic waves.

Online instigators and trolls telling people that such equipment causes cancer or coronavirus infection, appeared to be like the [1857 mutiny by Indian soldiers](#) of the British East India Company. Those soldiers were told that their gunpowder cartridge casings were smeared in cow and pig fat. It was eventually found to be true that bullet cartridge casings were greased with animal fat and the *sepāhī* (infantry) would tear the casing with their teeth to load their muskets with gunpowder. The *musketeers* thus, came into contact with and ingested pork and beef fat. Of course, this type of animal fat was used instead of hydrogenated vegetable oil because it was cheaper. One can always trust a military to use the cheapest shit available, for all conceivable jobs.

In South Asian traditions, particularly in Islamic culture, pig related meat and products are [considered not only unkosher, but rather unholy](#) (scroll to bottom of link and click on *view data*, to understand why "human meat" was an included category).

And in Hindu culture, beef related products are offensive for desecration of a sacred being. This is why the act of subversively making Hindu, Sikh as well as Muslim soldiers bite into filthy animal fat was a vile offense, deserving punishments worse than that of death. Even though the British Empire was aware of this all along, and tried to change the technology for greasing cartridges later, the unapologetic defiling act by British commanders against South Asian religious traditions, set spark to years of boiling tensions. Those tensions had arisen mainly due to torture, cheating, and murder, committed against Indian people for decades by the British Raj.

In fact, the suppressive response against the Sepoy mutiny of 1857 was to publicly execute rebels by lynching, or [ritualistically murdering them with cannon fire](#), by tying them to the front of a cannon's barrel. Such vicious tactics of making a public spectacle out of murder, were used by the British Raj, for terrorising and demoralising a colony into submission. And that philosophy of completely demolishing will power of a community to fight for dignity, with gruesome acts of genocide and looting, has continued to be [the core tenet of British military doctrine](#), for more than the past five hundred years.

The [armed conflicts currently raging in every other country, around the world](#), are similarly due to complex factors that have culminated over many years. And the situation in these countries have been fragile enough to blow up, due to simple rumours, gossip and [selective truths](#).

However, even long lasting riots or mutiny don't necessarily turn into battles or wars. [Scores of countries](#) in the world that owe their existence to a legitimate freedom struggle, against the British Empire, also owe their constitution, to British engineers laying down networks of electrical lines for telegraphs, roads for postal services, and railways for moving heavy goods, and large numbers of people over vast distances.

Educated people in those countries who could finally communicate with each other and distant communities, via supplanted English language and telecommunications, eventually realized that they were all getting screwed over by the same heinous fiends who call themselves, "royal heirs to the British Crown!"

There is nothing else more profound, powerful, and effective that unites people towards a cause, than the hatred of a common enemy! This is why the main component that turns an individual or neighbourhood level conflict, into full blown battle, is communicability of that hatred. More fundamentally, without established communication lines and supply chains, all forms of activities, positive or negative, simply fizz out.

Perpetual

Militaries and soldiers of the world have no conception of peace, not even when they are labeled as "peacekeeping forces." Soldiers only know of cease-fire, which can last a few days to a number of years. Long term cease-fire that lasts ten to fifteen years, is merely to replenish resources, and to steal children from destitute communities. These stolen children are groomed for turning them into callous war fighters. Oh! And a long term ceasefire is also for building new war machines.

Particularly, supply lines for crude oil and refined petroleum are primarily created for the sake of advancing war fronts. Prior to petroleum the main source of industrial energy was coal. So cargo trains as well as shipping lines were initially laid out to transport large militaries, on the basis of steam and coal power. Unfortunately, highly polluting coal is still the main source of industrial scale energy for many countries of the world, especially for steel production. And prior to coal power it was the supply of horses, [mules](#), elephants and cattle that grew armies.

Go ahead and research the [development of these supply lines](#), throughout human history, and you will find the [footsteps of conquerors who laid waste to this Earth](#).

Of course, the very essence of any industrial activity is human labour, not material supply lines. Resolving the human resources issue, of creating or finding motivated and skilled soldiers, is quite difficult. This issue is usually solved through slavery, and other forms of captivity, that generate a constant supply of human capital. To that effect, stealing children from ravaged settlements, seems to be deeply encoded into the minds of ants, termites, bees, and human beings.

It appears that orphans and people with orphan mentality, make the most hardcore, and zealous soldiers, who follow along without questioning dictum, and do things on command. This is most likely because orphans and people with daddy, or mommy issues, are desperately insecure for attention, a sense of identity, and a place to call home where they can belong. They easily fall for maxims which make them feel like losers, for wanting to exist in peace without murderous conflicts. These maxims usually sound like, "survival of the fittest is nature's law." Too bad, they never realize that by following such ideals, they will only

get stuck in survival mode, like pack-rats in a cage. By following such views, none of them can ever reach a stage of life where they can thrive, or even achieve simple equanimity. The worst of these maxims is that of the "Sin Eater." Subversively convincing people with a shattered self-esteem that they are meant to be [sin eaters](#), generates easy to control [assassins](#). Even though the concept of a [sin eater](#) is widely discouraged by most theologians, SS agencies in the UK, US, Vatican, Saudi Arabia and Israel have never shied away from using it, to snare vulnerable people into doing [deplorable, dirty, wet-work](#).

It is also very easy to guilt trip, humiliate, ridicule, taunt, scoff, jeer, deride, debase and gaslight poor and insecure people, to make them thoroughly internalise a sense of low self-worth and low self-esteem. These hollowed out people then look up to the person who is in a position to deride them, and eventually become ardent "followers" of such derogatory populist "leaders." So you see, targeted and trapped orphans can fuel wars, and wars can generate more orphans! This is a ghastly yet perfect ouroboros of [a human centipede](#), eating its own tail.

However, waging wars is not sustainable in perpetuity, even with all possible supply lines hoarded to fuel hordes of humans, who were brainwashed to become kill-bots. With the fuel, vehicle and the killing driver ready, the remaining component is an engine. The engine to warfare is sales of weaponry and weaponization of everything imaginable, to perpetuate an endless arms race. You may agree that shields and defence mechanisms using walls or barricades, are a subclass of weaponry. There are of course blades, projectiles, firearms, explosives, and other incendiary, chemical, biological, digital and nuclear weapons for offense. Now, take a look around yourself and find something that cannot be weaponized by you, or anyone else. Go on, do that now. Next, peer deep down within yourself, and find something that cannot be weaponized by you, or anyone else. If you are self-aware, without conceit and have genuine honesty, you will acknowledge that all tangible and intangible things within your mind's grasp, are weaponizable by you, or at least, someone like me.

Weaponizing things is trivial. This is why I do not weaponize things anymore on command, and don't hand war machines to commanders, at least, not anymore. Why? Here is why:

Consider the mythology of [Tubal-cain](#). Tubal-cain was a brilliant crafts-person of metallic artifacts and tools. He was also a weapons master. Tubal-cain crafted things from wrought iron, like spears, that allowed his tribe to stave off attackers. Those attackers typically had simpler weapons and armor made of wood, bronze or tin. Tubal-cain's nomadic tribe won many successive battles, and eventually became a bloodthirsty hoard of marauders. The tribe continued to rampage throughout reachable mountains and valleys on horses. With each war it fought on any grounds, it won and grew even larger in population and wealth. As it continued to grow, it became ever more thirsty for expansion. Tubal-cain eventually saw the carnage laid in the wake of such conquests, along with the evil that was brought forth by his inventive weapons. He was deeply moved by such bloodshed and sorrow. And that is why, he avowed abstinence from vengeance, as well as violence. Tubal-cain then took to making artifacts similar in shape to the spear,

that is, a trowel and a plow. These implements supposedly led to people settling down peaceably, to start the earliest human civilizations around Anatolian, Caspian and Mesopotamian regions of Earth.

This legend or mythology of Tubal-cain certainly has many variations including, the one that I just now invented. But the idea about people's shift from being savage hunters, to "civilized" farmers, artists and artisans, is usually retained in many of its variants.

However, this societal transformation to agrarian, and eventually industrial communities, has not gone well for most species on this Earth. I would say that Tubal-cain's soul is still burning in agony and rage, instead of being vindicated. This is because Tubal-cain by now must have recognized the horrendous devastation caused over the ages, throughout Earth's every livable space, by activities from mining materials and farming cash crops to feed undulating empires. The plough and shovel ravaged the Earth's surface, along with the trowel, that replaced natural habitat with heaps of concrete, bitumen, asphalt, ash, soot and plastics. By no means can Tubal-cain rest in peace, well knowing that every artifact given to man, can only lead to apocalyptic destruction of Earth.

Such is also the morale in mythologies of [Prometheus](#), [Icarus](#), [Pandora's box](#), and [Samudra Manthan](#) (okay, at least, this link is not a gag).

The same morale is also given by the legend of Ashoka, and even in the genuine biographies of Kemal Pasha Ataturk. These men saw a blood-soaked Earth, and decided to take a different path in life, by abandoning armed conquests and laying down weapons of mass brutality. But even Ashoka, Ataturk and [people who escaped to the Americas after World War II](#), only remained enthralled by the trappings of this realm. Each of them only managed to get society to the next level of unbound consumerism, directed at devouring the Earth.

Has there ever been a view of humanity where people don't end up screwing the planet through and through? It doesn't look like there has ever been a decent utopian story, where people manage to preserve and develop natural resources, rather than instigate complete habitat destruction throughout the planet, towards a hideous apocalypse.

So let's make an attempt at a pragmatic utopian story. A story in which people realize the futile nature of an arms race, and rather than weaponizing things, concentrate on nutritionalizing and medicinalizing things.

It should already be obvious that the category of things in this world that can be nutritional to humans is very small, and that of medicines is incredibly minute. The topics of nutrition and medicine are very difficult to comprehend and work on. Weaponry is easily generalizable, for example, [a nuclear weapon](#) can indiscriminately obliterate all entities within its blast radius. Biological weapons are even worse, as they can rage throughout the world in the form of a pandemic, producing inter-generational harm and devastation, for decades. And industrial pollution from globalization is simply the worst. This is because of its ever growing

and pernicious nature that harms and threatens the well-being of all living species, for centuries. However, the concepts of nutrition and medicine are very specific to individual needs. [Comparatively,] harming and destroying things is trivial; even paltry rumors and gossip are sufficient to wipe out nations!

So shouldn't people interested in being the best they can be, in realizing the greatest potential they can achieve, do so by working on the toughest problems of poverty alleviation with ecological sustainability?

Yes, but it is so much easier to systematically exploit orphans, people with vulnerabilities or disabilities, and poor communities, while raping the world. So why bother doing difficult things like social upliftment and environmental preservation? Why is it essential, or at all necessary, to do such miserably difficult things, when life can instead be full of easier warmongering? War clearly sells well, like sex!

By now, Covid-19 pandemic should have forced people, especially world leaders, to consider the meaning of the word - **essential**. Clearly, there has never been an anthropomorphic "sovereign" in this world, who was munificent enough, to tend to the needs of each and every subject, as their own heir. It is already evident that food and vaccines are incredibly difficult to distribute to those in need. And all of us are always in need of such things. These are the things that give money value. There isn't anyone who needs to struggle to monetise potable water, hygienic foods, and legitimate medicines. Without such essentials to support life, money would be pointless. So, will the current global crisis enable people to focus on using innovations and discoveries for something other than war? I don't think so. The current global crisis has all the hallmarks of full-scale-cyberwarfare that has moved from the stages of economic wars to biochemical ones. And currently it is heading towards a global level, ballistic war.

Psyops

The essence of cybernetic warfare is to inundate and surround the enemy. It is the only goal to be achieved, as well as the only process for moving towards the goal, of getting rid of the enemy once and for all. Try to guess an answer for the following question: If you manage to surround and inundate your enemy's intellect, what further tactics or strategies could you possibly ever need thereafter?

Yes indeed, all of humanity is currently inundated and surrounded by coronavirus. And none of us are able to focus on anything other than its impact on every aspect of our lives. An enemy, to all of humanity, managed to orchestrate a *final solution*, against all of us.

The world is heading from a stage of being fucked up beyond any repair, to being fucked up beyond any recognition. The final stage after that is to get fucked up beyond any redemption! Being rendered into oblivion is a situation when nothing in the universe can EVEN recognise our absence! This mechanism that can obliterate all life on Earth does not rely on chaos. It relies on the ever growing pretentious zeal, of human beings, for monotonous order. Zeal without context is called fanaticism. And who can be more of a fanatic control freak for homogenized monotony, with abject disregard for [context](#) obtainable from culturally diverse ethnicities, than industrial imperialists?

Especially during a crisis or an emergency situation, "leaders and top brass" rapidly come to the conclusion that providing [rhymes and reasons](#) to the masses, will not convince any inferior groups of people, to adopt a particular interpretation of history or of the present reality, in order to commit to the next set of actions. They conclude that rationales and logical arguments will not convey the ethics, and especially, not the aesthetics that, "everyone ought to adhere to," without discussions or disputes. They deeply imbibe the view that morality is too ephemeral, its circumstantial and relativistic view, from a particular perspective, "naturally," isn't communicable to another person who has a different world view. As such, all other non-conforming worldviews are to be eliminated! And persons refusing to assimilate in the one and only, true and unassailable "bible," need to be exterminated! Here "bible" is used as a generic term for an edict from any conceivable religion, or any so-called scientific canon of first principles. The standard conclusion put forth by leadership, for governing the world's compliant masses, is to then assert that, "there is no such thing as the good guy or the bad guy, the scrupulous one or the fiendish one, there is only the group of alive people, and the group of, dead people!"

Only alive persons get to rewrite history and set norms for the future of mankind. To the victors go the spoils of war, and for the losers awaits a cavernous, unmarked grave.

But this time around, the humble and poor, who live in distant and ecologically healthy environments, away from such maniacal leaders, might come to inherit the world after the pandemic. Maybe, just maybe, in this version of our world's story, [there might not be an Armageddon](#). No war cries, no bugles, no explosions and no sirens. Instead, there might be a calm and tranquil transition to clean air, water and soil, with polluting fossil fuel based activities, being saliently shut down for good.

It seems I am [still alive](#) and naive enough to dream about such things. Of course I am still alive if I am able to produce such a long-winded rigmarole of an article, while [spinning endless yarn](#).

In a more pragmatic and not at all pessimistic sense, most certainly, one or the other country is going to double down on the chaos from the pandemic, to overpower a neighbouring country into submission. For instance, the rulers of Shanghai who brutally took over Hong Kong that I had mentioned earlier, aren't entirely Chinese. They are a conglomerate that also includes Arabs, Emiratis, British, Americans, Belgians, Swiss, Turks, Irish, French, Italians, Japanese, Brazilians, Russians, Indians, South Africans and South Koreans. Their names and affiliations can be found in the roster of companies listed in the Shanghai Stock Exchange and in the list of board members of HSBC.

Each time a systematically orchestrated recession slashes and burns through western countries, minimum [wages get bashed down and stifled again](#). Following this, global investors stash their money in Japanese, Indian and Chinese stock markets. This is mainly because middle class citizens of these countries are more servile and obedient in paying off debt that was illegitimately thrust upon them. Well, what about [Australians](#)? There isn't anyone out there who gives a kiwi's ass about us Australians.

Eventually when the recession is said to recover in western countries, equity is laundered through Middle Eastern, African, [South American](#), South Asian and Central Asian government projects, back to the rulers of the City of London. A present day example of this is the [current Indian government's payment of a billion British pounds to England](#) "to create jobs" in the UK, while being short of basic amenities, jobs and vaccines for hundreds of millions of people in India. These kinds of "trade deals" are a farce. They exist only to launder money and buy political favour for a few "elite industrialists", who can escape to the UK from places like India, when the going gets tougher for them.

Moreover, practically all of [European Round Table](#) is vested in Shanghai. In fact, a large portion of China is built by a few corporations like Arcelor-Mittal. Most of the vehicle building factories, shipyards and hangers are owned by just a few oil, mining, computer chip, media, pharma, marine, aviation, and automotive corporations. Additionally, most consumables, equipment, tools and vehicles for civilian as well as military purposes, are provided by the same holding groups, to achieve the same old, same old, feudal era colonial objectives. This is why, it is highly unlikely that any of such fossil fuel based corporations, that have grown to be giants on the backs of slaves, will knowingly give up on this opportunity from an ongoing pandemic, to yet again, swindle the world's frightened and huddled masses.

Likewise, people who rule Toronto and Vancouver aren't entirely Canadian. They are mostly people from around the world who pull puppet strings via Hong Kong. These puppet masters try out dangerously new technologies, programs and ideas in Canada, before those things are implemented in the US and released onto the world.

Canada is the world's best [sandbox filled with crash test dummies](#), who will gladly kowtow to any "guru" that shows up with an "investment scheme." The fear of being left out is very deeply ingrained into Canadian psyche. Like people from any orphaned colony, Canadians just want to be included at the big boy's table in the United Nations, or NATO, and to belong. This is why Canada keeps getting suckered into sending troops to war-fronts, in the name of "peacekeeping missions." Those war-fronts are only for securing oil trade routes and slaves; slaves in the form of refugees who invariably end up in places like Canada, as orphans without a country to call home. Canada, particularly Ontario, then churns out these dazed and confused refugees as obedient and humble servants, to fuel the next wave of war efforts.

The worst thing done to these poor refugees is to supplant their culture with a [warped version of Christianity and medievalism](#). This is mainly done in the name of modernising and christianizing these people suffering from "trauma." Those people would not have suffered the trauma of their entire country getting bombed to dust, had Canadians not supplied troops and intelligence to western nations. [The western nations](#) and NATO allies are still trying to pull off a version of Christian Crusades, from the dark ages, against African, Middle Eastern and South Asian countries.

All of the holier-than-thou [pontifications](#) in this blog article, aren't merely to throw shade on various corporations and military groups or regiments. While some ironic, flippant, sarcastic, and off-the-cuff statements are cathartic to my work and life choices, the rest are to draw attention to dicey issues, in a peculiar manner. Issues that cannot be discussed without strictly preserving the secrecy of the sources of information, pertaining to issues like, *current psychological warfare in North America*.

The manner in which all Americans are surrounded and inundated with a petrochemical lifestyle, while being chained into paying mortgages and insurance premiums, is certainly the height of imperialism and cybernetic warfare. This model of completely bridling wage earning people and sapping their labour is used all over the world, in many countries. However, the worst affected are American students who are [enslaved for life](#) into bonded labour and debts from trying to pay off education loans. No other country binds student loans for life! American students, on the other hand, are not allowed to restructure or file for bankruptcy concerning their education loans. And its interest payments are carried on indefinitely. It is natural that many such unfortunate individuals opt to join the US military, instead of going to college, due to reasons of poverty and financial needs. Little do they know that as soon as they become enlisted, they are constantly made to memorise their personal *kill switch*.

A psychological kill switch is a phrase with a distinct series of four to five words (concepts). Each soldier, contractor and researcher working in the defence industry is allocated a unique phrase. When this is triggered by their superior, commander or handler, it causes the person to commit suicide by any means possible! Before I continue to explain this program, it is necessary that I give you the method of constructing a kill switch, for your kill switch. This is just in case you happen to have gone through a special ops training program which, by now would have completely crystalized and deeply ingrained your psychological suicide pill, [deep within your sub-conscious](#).

The meta-kill-switch is constructed by assigning a very frequently occurring visual, tactile, auditory or olfactory stimulus, to the idea of restoring yourself to healthy living. Go ahead and choose a simplistic experience, such as your breathing, or vision of light, or any such memory that reaffirms to you, who you truly are, as a kindred human being. Then revitalise yourself through meditation as frequently as possible, each day. And should you have the slightest inkling of ending your world, no matter how difficult the situation gets, you will merely need to focus on this chosen concept, to revive yourself. Let no enemy, or so-called confidant or ally, turn you against yourself!

Now, as a personal note for the worthless profilers, behavioural psychologists and the SSS handlers reading this document. Let me give you another chance at trying to kill me. Here are the first three words of my kill switch in its correct sequence - Canopy, Salamander, Airheart. You merely need to find the fourth one. No, it's not [Alabaster](#). Also, since mine was successfully used twice already, I don't know if it is worn out by now. Maybe it will not work again even if you manage to find the complete phrase. But, let's hope for the best concerning your future; perhaps the third time's the charm, and I will simply stay dead, [when you manage to kill me again!](#)

The most subtle thing about a psychological kill switch is the method of delivering them. Sometimes one of the words is provided as a visual stimulus, the other as near infrasonic or near ultrasonic auditory input, including homonyms and homophones. And the others can even be suggested as an inferred or implied concept. By breaking up the phrase into a combination of different media, modality and modulation, it becomes impossible to trace the kill switch to the handler who triggers it. For example:

[canopy](#)

[salamander](#)

[Amelia](#)

Individuals inducted into the most advanced regiments, of any globally vested organization, aren't just the "fittest" according to their merits. They also happen to be the ones who respond best to "coaching," and who demonstrate an ability to precisely act upon given tokens, symbols, phrases, codes and orders. This is the oldest method for creating a culture and for ensuring that a person is a "cultural fit." The purpose of a kill switch is to put an end to a well trained individual who has gone "rogue," and has stopped obeying the [leadership committee](#). This usually happens when the person suddenly grows a conscience, or falls in love with a person from a different culture, or goes through a situation that wakes them to the other side of the story. Such an eventuality, of course, isn't conducive to the regime's vision of managing global affairs through obedient minions.

As soon as the kill switch is triggered, the person will eliminate every obstacle to killing "self." This trigger can be set off deliberately or accidentally, which has unfortunately led to many soldiers in the US and UK murdering their family, friends and neighbours before they killed themselves. This is specially because the program was administered haplessly for US led soldiers in the 2000s, by lacklustre psyops trainees. Over the years, thousands of American and British veterans returning from recent wars in the Middle East, have committed suicide in violet ways. More number of [these soldiers have died on home soil, due to suicide](#) in

the past two decades, than those killed in action during Afghanistan and Iraq wars combined.

When most of you, enlisted or commissioned soldiers, went to one-on-one or group discussion sessions, in the name of training or therapy, the regime was merely trying to discover the best set of concepts related to guilt, comfort, love and fear that could be used as a trigger. The "trust circles" that you attended were merely a way to filter you into a group with a particular personality trait. Upon discovering the buttons that most effectively trigger you, you were assigned to the group or station, where you "belonged."

The kill switch doesn't just command the unit to end themselves, it commands them to end their world by exploiting their trust, at a fundamental level. But who initiates their kill switch and why? The simple answer is, the collective conscience of the Joint Chiefs of Staff agreed that, "those who are found to be derelict and unfit for the uniform must be *swiftly eliminated* from the ranks of officers and enlisted members." This culturally indoctrinated view has been misinterpreted time and again, by low and mid ranking officers who find that once a battle is over, the rag-tag men and women who were easily accepted into the military for boosting infantry numbers, ought to be disarmed, dismissed, and dismembered.

Often, enlisted people and others with basic training who barely qualified for a commissioned officer's role, are let loose into civilian life, without a care for the difficult transition. When frustrated and angry ex-service people get into troubles like addiction, domestic violence, petty theft, etc. they are picked up by the "corrections system." This is where they are subject to the whims of state sponsored mind-rapists, in the form of psychologists and psychiatrists. There are many insidious ways in which such psychologists and psychiatrists violate their Hippocratic oath, and ascribe degrading labels to pathologize as well as dehumanise a person in their care. A judgement on the morality and future utility of the rogue person is then cast by these unsupervised pseudo-medical professionals, with a bias towards taking out the riff-raff.

In this way, ex-service people are branded as unfit for any society, particularly due to the claim that these ex-personnel are sinful, with blood on their hands, and due to their "unstable" nature. However, all of these conditions were thrust upon them by force in the first place, through years of training in caged environments. These forced situations and conditions shredded their freewill to follow their conscience. So finally, if these duty oriented people don't get easily subdued, through over-prescription of opiates and benzos that act as mind wiping roofies, leading towards a slow and muffled death in poverty, far away from the eyes of any awake person, then an order to deliver their [kill code](#) is set into motion.

Why do I say they and not us, or we? Each decade's cohort is different. Those of you who are returning from Afghanistan, Iraq or Mali also happen to carry the next-gen techniques of being subdued, through retro-viruses injected directly into your bloodstream during recruitment. These biochemical techniques weren't perfected during the 70s through 90s. So there really isn't a do-it-yourself method for dealing with a kill switch injected into your biology. But here is another way to disarm various other psychological triggers that may have been [implanted into your psyche](#).

You can learn a different language and try to become fluent enough in it, to be able to think in it. An incoming stimulus inspires a concept. Labeling or naming that concept with a linguistic tag allows us to construct a language with symbol-meaning bindings. Make sure that you expand your mental dictionary of things you experience. This way the feelings, tastes, smells, sounds, and visuals you conceive in your mind, to describe the world, can become entirely your own. This method of improving your chances for survival is perhaps the most difficult thing to achieve for any human being. So empty out all conceptions from the mind that were inherited or derived from someone else's perspective. Upon doing this, the thing that remains within you is your pure originality and creativity. This is when your mind, body and soul become one! This one is your unwavering guide on your path, to your destiny!

Indeed, this is much too easily said than done. It might even seem impossible and practicing this will undoubtedly take many years. However, upon achieving it, each symbol, glyph, emblem, or a word in this universe, can then be mapped onto a kaleidoscopic [spectrum of meanings](#) using your genuinely unique perspective. Once you achieve this, by no means can there be any reasons for you to have to apologise to anyone, for your authentic and genuine state of being. This will be sufficient to create a perception of the world that prevents the exact sequence of words, induced into you as your psychological killswitch, from materialising ever again.

Such a method of becoming strong through education, growth and self awareness, works in general, against treacherous psychological manipulations. The most common of these tricks works like this - a person shows you a triangle, rhombus, pyramid, bipyramid, diamond, tetragrams or any platonic shape, and then tells you that it represents how your mind, body and soul are separate or separable. When you encounter such a symbology, imagine shrinking that shape's area [or volume] to equal that of a point, or expanding it to equal to infinity. This is how you start to build upon axiomatic symbols that abide by a singular and pristine meaning, unique to your life. In this manner, you will be able to discover, embody and live by those axioms, on your own accord, by your free will, without anyone else's interference or pressure.

Hopefully you've mapped your life, upped your meta-analysis skills, and are on your way to building your meta-kill-switch. Also, invest in cool polarising shades and noise canceling earbuds that aren't connected to any digital devices. You will need those things so that you can move past the toxic shadows, [away from things like islamophobia](#) and prejudice, especially preconceived prejudice against various age groups and differently abled or gendered people. If you are still struggling, try the following.

Take a look around and find anything that is not a symbol. Find any such thing that is not a system or a word within itself. Did you find such a thing, anything at all? So do you now comprehend that every portion of this universe is a word, and that its entirety is "The Word."

[Word up!](#)

Lastly, before moving on to the next topic of Cyops, let me draw your attention to this question, "What if an important truth could be conveyed to intended receivers, by wrapping the message in all the standard [techniques used for lying](#)?" The purpose of doing this would be to shroud the message from anyone looking for an excuse, to be lazy in deciphering the message, or to be dismissive of the sender.

This way the message might, just might, penetrate right past the mind's eye of the false gatekeepers, and reach its intended recipients. To the earnest and enduring ones, resisting corruption, I can only hope that [this message](#) has finally reached you, in refuge among good and honorable people, safe from those usurpers in high chairs who claim to "serve and protect." By now you may have come to notice that they only hide [the truth](#), while fiercely protecting their selfish means towards profiteering, using dastardly tricks.

[Cyops](#)

Whether you are a soldier or a soldier-wannabe, with dreams of joining a Hero Academy, in all likelihood you will never come in contact with the so-called terrorist or [barbarian](#), that you were so eagerly stoked to fight against with your life. You most probably will never even get to see any action, on the battlefield using live rounds, or weapons for close combat. You will however, at all times, and within every place of your [impoverished existence](#), be an integral part of the cybernetic realm of information and communication.

Simplified Diagram of Knowledge & Influence Flows - Defense

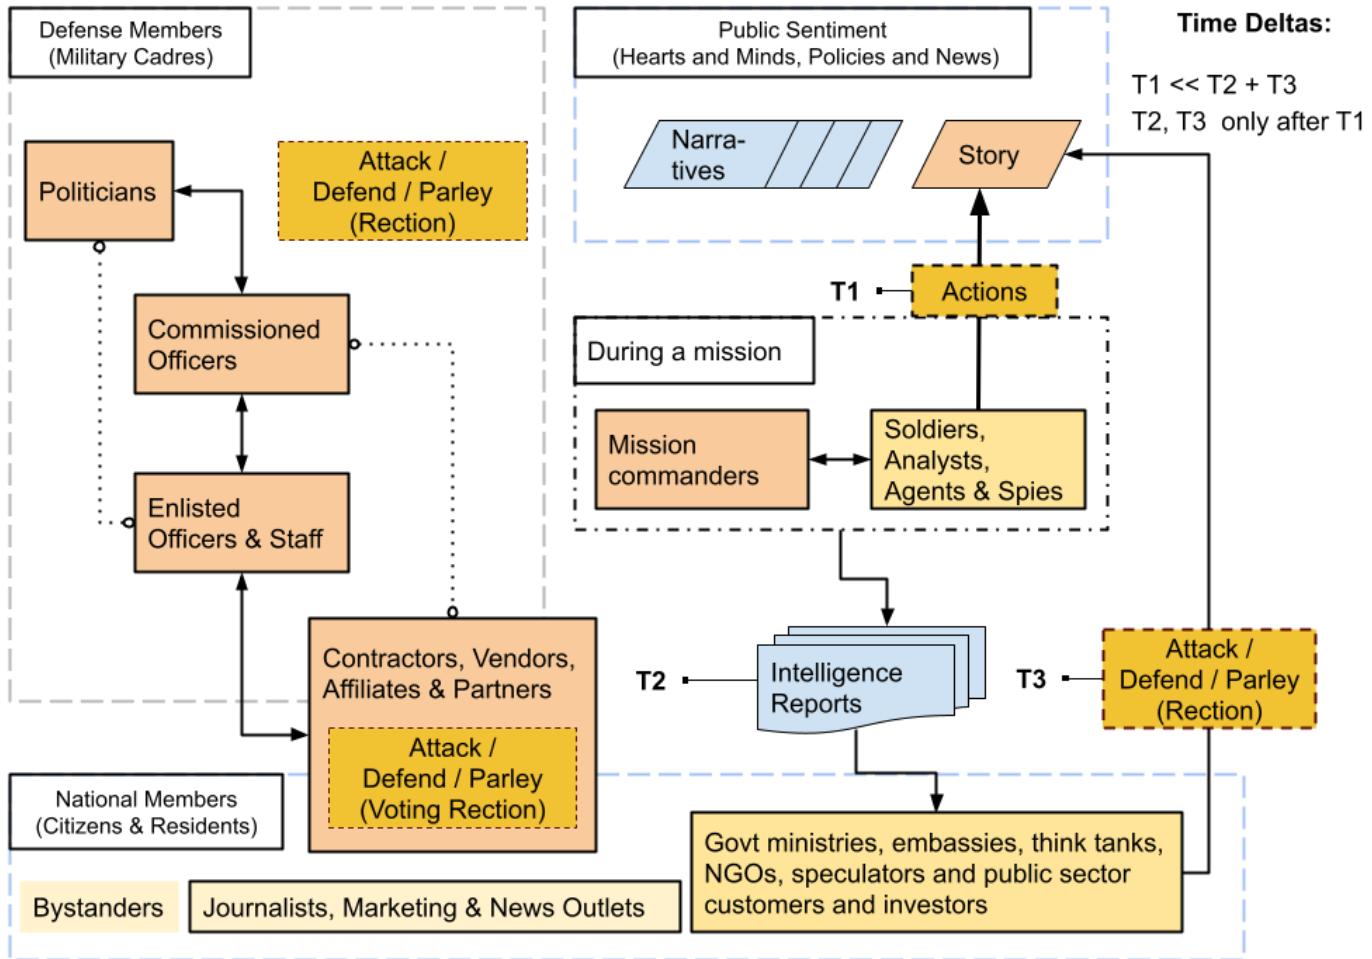

Figure 0 - Military communications analysis (also see, [Business communications analysis](#))

While a psy-op revolves around manipulating the beliefs, attitudes and behaviors of a person, or a group of people, with targeted personal interactions, a cy-op revolves around online and electronic methods for stealing or meddling with private information, for driving public opinion. In psyops, one manages the expectations and tailors the motivations of an unwitting person or a crowd of people, through human-human contact. And in cyops, one manages the outputs while tailoring the inputs of any communicating system, mostly using automated routines. Some of the techniques used in both psyops and cyops are called, [sockpuppetry](#), and [astroturfing](#).

Conducting more advanced and full fledged cyops requires a definition of [cybernetics](#), which in turn requires a particular definition of communication. Here the concept of communication is from the thermodynamic sense in which a system can undergo changes through energy transductions and transfer of momenta. By the way, any collection of singular or multiple things is a system. A collection is a thing, a thing is a system and a system is a thing while a thing is a collection. Also, everything is a container. So not-container, not-system, not-collection, not-signal, and not-thing are undefined within systems engineering and cybernetics.

A system's physical degrees of freedom to undergo change, coincide with the probabilistic uncertainty in determining the system's configuration, upon a communication influencing it.

As such, cybernetics is the study of all conceivable tangible and intangible things, using a systems perspective, to describe how a cascade of changes can occur between two communicating entities. This study is aided by a set of vocabulary and logic from mathematics and physics, particularly from signal detection theory and control theory. In this sense, cybernetics is also a framework for describing our world and the reality we live in. Its primary purpose is to accurately and precisely explain the nature of any possible communication that can be intercepted. Doing this demonstrates how a communicated instruction in the form of energy or momentum transfer, into a system, causes a change in the system's constituent parts. From the old-school perspective of cybernetics, everything in the universe is an information processing system that can encode and decode a variety of communications.

From the cybernetics perspective, there is no need to consider the psychological aspect of a being, as independent of the being's physical configuration. This is because considering the being's function as an agent of change in an observable, physical realm, is necessary and sufficient for describing the being's motivations, range of actions, as well as the being's ultimate purpose, within that physical domain. Such a perspective can very well be labeled as an extremely reductionist, or an extremely holistic view, of the universe and its parts. But, it gets the job done, it accurately and precisely describes all possible phenomena in our existing world, including things that are thought of as purely mental or purely spiritual. This is done by taking a [multidimensional](#) view of the universe, with more than four dimensions of space and time, or spacetime [or state space]. Within such a worldview, there are no restrictions on the number of mutually exclusive, [orthogonal dimensions](#) of the universe. And so, purely mental or spiritual phenomena, defined via cybernetics, is akin to non-linear communications occurring along multiple hyperplanes.

Such communications aren't necessarily from a "spirit" or a "ghost", as they can simply be delayed or reflected signal waves, from previously generated communications between physical entities, bouncing off various planes of our universe. It might however be easier for most people to invest their attention and belief in ideas about ghosts, aliens, and other supernatural entities, than doing painstaking [signal-intelligence work](#).

The vocabulary and scope of cybernetics is the most detailed and expansive one available to any society.

From my experience in natural language processing, I can observe the following in comparing cybernetic, martial, religious and other approaches of describing "reality." The size of vocabulary used within a battle-space (रणभूमि) is only second to, but very closely matched by, the vocabulary of fine-arts-space (रंगभूमि).

Truly, if any form of "bhumi" (भूमि) exists anywhere, there is certainly a "bharti" (भारती) already on it. Trying to aggress against a bharti is tantamount to aggression against all of bhumi. Committing such an act

wouldn't just result in "a scorched earth," it would create a scenario for "no earth strategy." Any group of people, such as the US and its allies, still attempting "full-spectrum-domination", should be fully aware and cognizant that pursuing such endeavors, will only give rise to, "full-spectrum-annihilation!"

It isn't surprising that the ultimate purpose of both battle theatre and performance theatre, is to mold the form and function of every participant and onlooker, towards a final culmination in catharsis or closure. Birth and death, growth and folly, trust and betrayal, banality and transcendence, basically every aspect of human experience can be described using analogies and idioms, of martial-life, as well as [circus-life](#). Seriously!

Any military or a circus is entirely fascinated by and completely dependent on using, misusing, and abusing [freaks](#). Much like in a circus, the main assets of a military are "tamed" by their handlers through [torture within a caged environment](#). The assets are molded into a hollowed out Muppet, by breaking down their willpower to exist freely (free as in freedom). This procedure eventually produces a compliant and obedient property that can [turn tricks on command](#).

The might and magic of both military campaigns and circus shows, can be captured very easily within the mediums of performing arts, animation and cinema. For instance, each of the actors highlighted in Figure 0, and their roles as protagonists or antagonists, can be portrayed in a variety of shades. None of the portrayals of these roles need to be "absolute", because for each collection of actors on one side of a battlefield, *the other side is always the red team.*

Each side calls itself righteous, and generates propaganda labeling its members as the good guys, and that of the other side as the bad guys. This is why, even the vocabulary of sports is often used in describing mission parameters, and objectives of a military excursion. Games and sports have been routinely used in every culture for teaching "life lessons", to make a person become a morally just and upright leader, warrior and ruler.

[Games and competitions](#) are also used for drilling in the viewpoint that nature is unfair, and that the only winner is the one who survives in the end by any means necessary.

So is there no such thing as a genuinely wrongful act or a true crime? There certainly is. Every act of rape is the most heinous, and unforgiveable form of criminal violation. Raping someone is so wretched that even Raavana, the mythological embodiment of evil in Ramayana, abstained from touching Sita after kidnapping her, as she would not consent to it. The topic of rape is so serious that in one version of Ramayana's telling, after Raavana is finally killed by Ram in a huge war of the worlds, and Sita - the damsel in distress - is rescued, Ram suspects that Sita was defiled by Raavana.

The lack of faith and trust that Ram demonstrates in such a simple act of suspicion causes Sita to curse him as she ascends to heaven in the form of a divine being, leaving Ram to wander about on Earth in

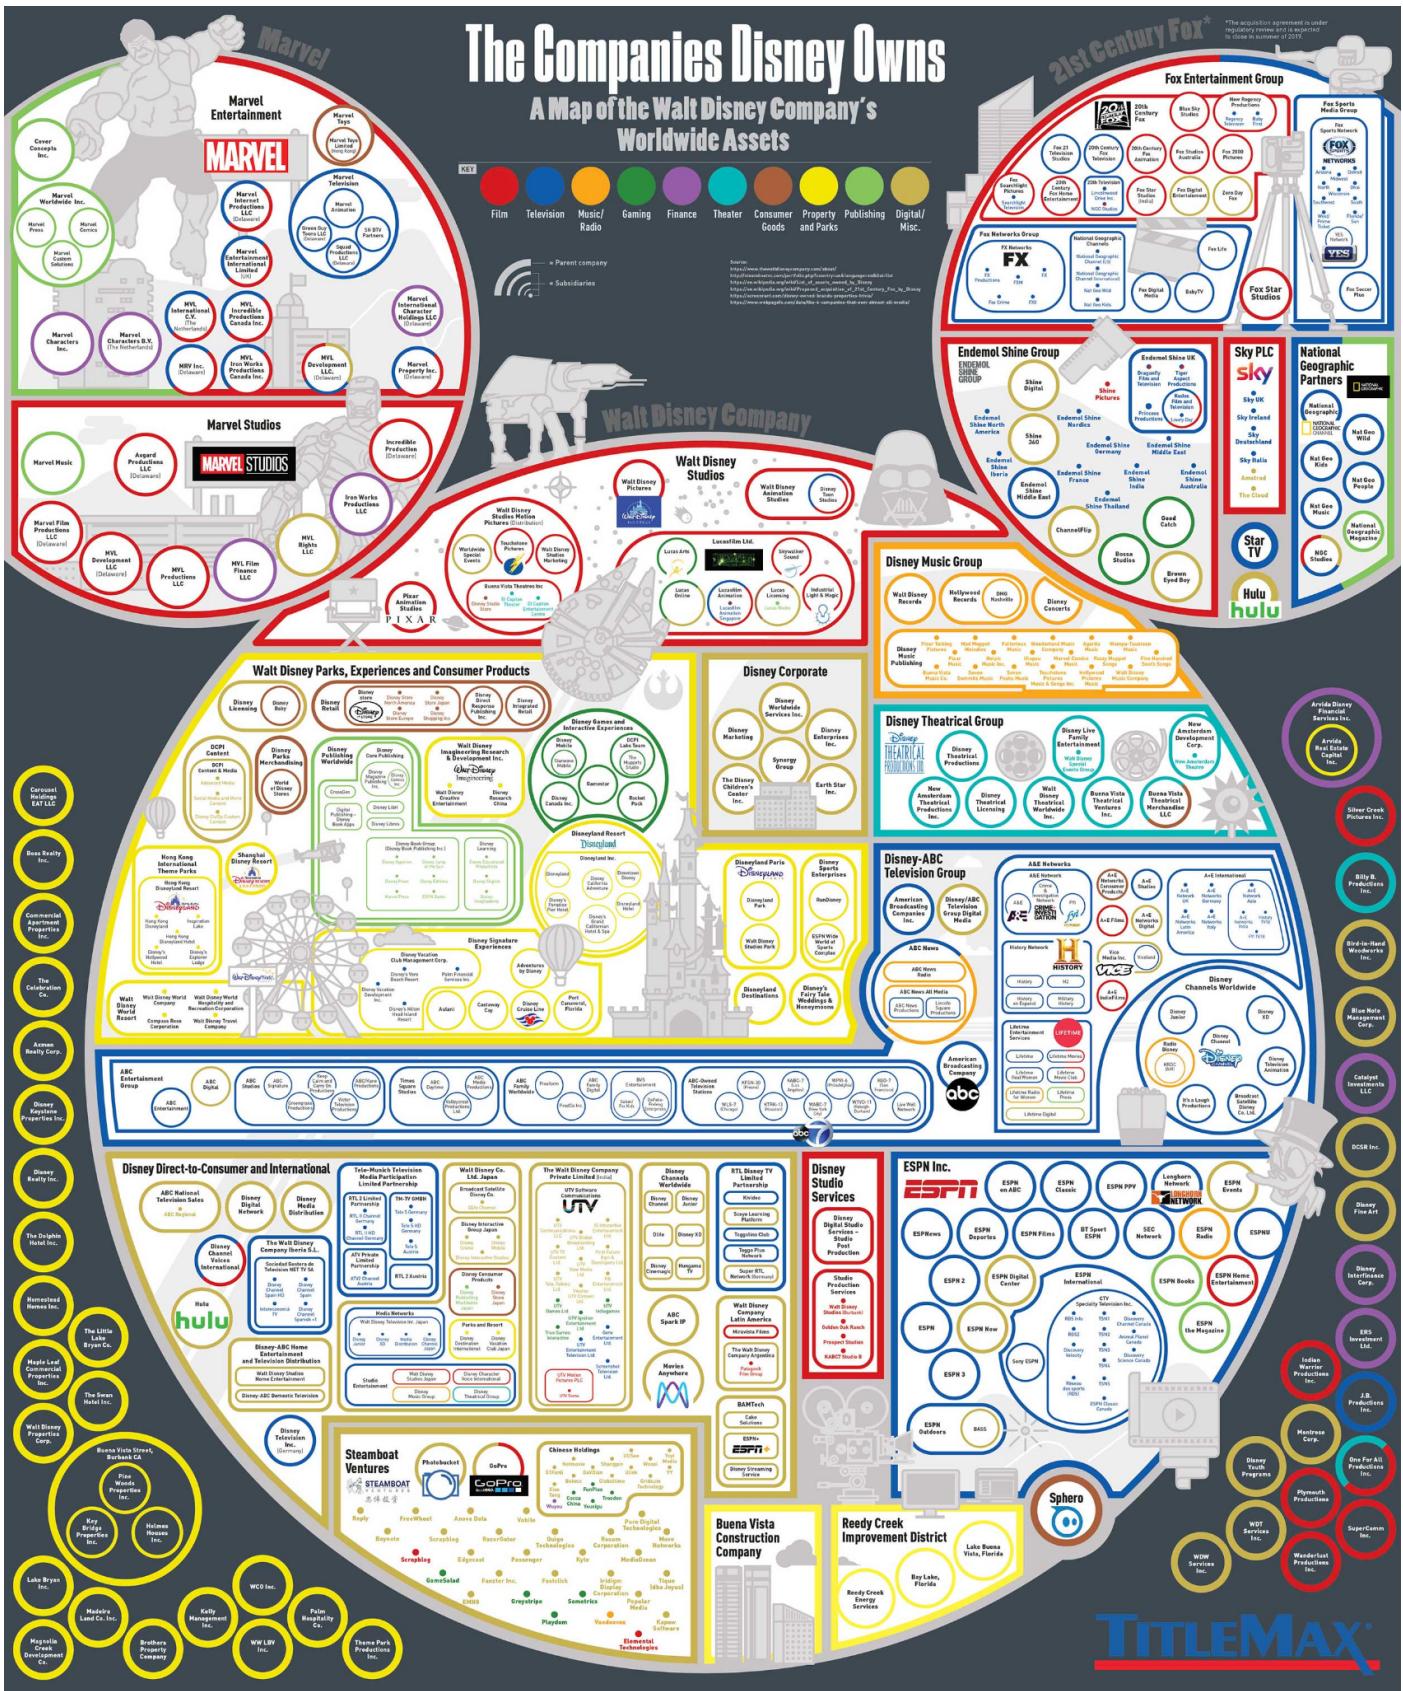

loneliness, as a mortal vagabond. The lesson in this telling of the mythology is that the character called Raavana, who is always portrayed as the ruler of all evil, did not even attempt to commit rape, because it is worse than all evil. And that the life of the character called Ram, who is always portrayed as the incarnation of a perfect human being with godly nature and divine attributes, could be thrust into a forlorn, antithetical ending, because of casting doubt upon the chastity of Sita.

Posting this telling and interpretation of a revered Hindu epic is bound to be considered sacrilegious, by sufficiently many people who believe that there are no other versions of [Ramayana](#), other than the one by Valmiki. Heresy and sacrilege are usually a very frequent and typical reason for a war. Would anyone be surprised if France got invaded by a bunch of "islamists" in case a number of French magazines publish a caricature of a muslim prophet?

So, is something as simple as drawing a cartoon or kidnaping somebody's wife, actually a good enough reason for war?

It seems to depend on whose cartoon is drawn by whom, and on whose wife gets taken, and by whom. Snatching somebody's wife was supposedly the reason for the [Trojan War](#), which is yet another epic legend about people who believed it was their birthright to rule the world. Those people believed in their right to rule the world because they were supposedly descendants of god, or representatives of god on Earth, or some such lousy reasons that shouldn't be legitimate anymore. However, there are still a bunch of people who rely on such ideas to assert their dominance in the world like [monarchies](#), and conglomerates in:

- [petrochems](#),
- [consumer goods](#),
- [automotive circle-jerk](#) and
- in multimedia ([broadly television networks](#), but more [specifically Disney](#)).

src: TitleMax

Who could possibly be better than The Walt Disney Company at psyops and cyops? No military corps has the power and budget that Disney has in shaping humanity's future. They practically dictate the FBI's targets and budget on copyright infringement cases. Take a look around and check if there are any Disney produced story, logo, character design, merchandise, or digital works sitting around you. Do you see what

being surrounded and inundated by Disney products feels like? Through Disney productions, the world's population is conveniently fed a mirage of what justice, beauty, etiquette and equitability are supposed to mean.

The recent change in Disney character design towards female personas with colored skin tones is just good business. The damsel-in-distress type of stories are also being changed to portray more "bold and independent female lead characters." The staple of the Disney company is to use a range of [psychological themes](#) to mould the views of children and younger audience groups who are the primary influencers of consumerism. And, much more cutthroat than Getty's internet-wide cyops with the use of TinEye, is Disney's botnets scouring the interwebs, to look for "piracy" of copyrighted materials. They do this even though they deliberately keep leaking copies of their movies, with tracking beacons, onto the *link-sharing scene*.

Every culture's stories and mythologies shine a light on the moral principles of Earthly living. Undoubtedly, any individual's premeditated criminal act of murder, guile, deceit, theft, cheating, treachery, treason, and other forms of violations, bring about a worse living situation for all of us. It sets the example that such a violation can be committed with relative ease. Additionally, it is already evident by the pace at which the justice system works, in any country, that the chore of proving a particular wrongdoing in court, usually takes years, if not decades. And the act of delivering a final verdict on a matter, with satisfactory outcomes, can be scuttled using a variety of tricks. For example, how many [presidents or prime ministers](#) of a country keep skirting the legal systems of their country? Almost all of them, yes? So what kind of a precedent does that set for the citizens, residents and visitors of that country?

What goes around, certainly comes around. This is why it is dangerous to adopt the vocabulary of a military regime, like the American and British ones that consider, "all is permissible", as the one and only principle to life. In this regard, cybernetics allows us to understand the distinction between what is feasible in the sense of axiomatic physical law, and what is acceptable [or permissible] in the sense of putative social norms and customs. What can be done, need not be [what ought to be done](#).

Physical axioms of this realm do not change while putative knowledge keeps evolving in a sinusoidal manner. Additionally, [it is not guaranteed](#) that an exhaustive set of such axioms will be discovered and adhered to consistently, by any regularised community. However, it seems that eventually a civilization attains a stable state of wisdom about what is a punishable act of criminal nature, along with a suitable measure of remedy. Sadly, we have not come to a level of societal evolution, where the following topics could be within the [sound] grasp of any legal framework or institution:

- genocides,
- culturally normalized [misogyny](#),
- ostracizing of persons with disabilities,

- deliberate subjugation of masses into slavery [or serfdom], and
- willful destruction of a community's natural habitat.

We are yet to have a globally mandated forum that can deliver justice on such matters involving intergenerational injury and harm. This is particularly true in the case of misogyny propagated by patriarchal regimes and cultural usurpers like Disney, who also treat anyone with a disability as a sub-human, and more generally, as a thing not worthy of any acknowledgement.

The permanent damage done by acts of genocide, hate crimes, and industrial exploitation of all ecologies at a global scale, cannot be articulated in comprehensive terms without cybernetics. It is plainly observable that no form of legal statutes, are yet to even acknowledge the cybernetic nature of our human existence, as sentient beings in a sensitive global ecology. The right to a healthy environment, with protected flora and fauna, is not yet envisioned as a basic human right by any group or institution.

So do you see why a war is currently the only legitimate way, to prevent further exploitation and subjugation of billions of innocent people, at the hands of vicious corporates and imperialists? Overzealous corporations and imperialists have continued to perpetrate crimes involving genocides, pogroms and slavery, with absolute impunity, for centuries throughout the world. Does the need for preventing your entire continent's natural habitat and its species, from getting chewed up by a tycoon, baron, duke, queen or a king sound like a reason for going to war?

Well, perhaps reparations could be an answer that does not involve wars, particularly cybernetic wars that include biological and [digital viruses](#). As a starting gesture towards reparations, let one of the children of Prince William, Duke of Cambridge, be raised up to adulthood within a First Nations reservation, in Canada. And similarly, let the other child be raised to adulthood within an aboriginal reservation, in Australia. In both cases, none of the children should ever be allowed any contact with their biological parents, till they finally leave the reservations after the age of eighteen. Actually, make that twenty one years to be safe. Let's see how benevolent, modernizing, and civilizing the influence of the British Crown was in those regions of the world, where surviving indigenous populations were ruthlessly packed into malevolent concentration camps, labeled as [residential schools](#), and reservations. Would Prince William's children turn out to be completely well adjusted, with marvelous skills and erudition, from the "high-end healthcare, and esteemed educational systems" available in those reservations? Or would they too end up in an [unmarked mass grave](#), only to be found a century or so later?

The eradication of indigenous cultures in all such parts of the world, where the British Empire laid its unholy gaze, is nearly complete! And for what? To have the benefit of fracking for feeding gluttonous capitalists and imperialists? Or perhaps it was to make many more cities in the world have tap water that can burst into flames, like that of Flint, Michigan.

It may not be the case that Prince William, Duke of Cambridge, was taught a version of history that articulates the truths about massacres of indigenous peoples by European settlers, in the Americas, Africa and Australia. He might not acknowledge, with adequate seriousness, the types of heinous crimes committed by Protestant, Orthodox, and Catholic missionaries backed by American, French and British soldiers, who stole indigenous children after murdering their parents, all the way up to the 1970s in those parts of the world. Thousands of indigenous infants, children and teenagers were then shoved into [the residential school system](#) for "reform and rehabilitation", where they were constantly molested, experimented on, and abused by "God fearing and duly abiding Christian citizens, of the newly established Kingdom of God." Such crimes were also committed against people of coloured skin in all parts of the world where the British thrust their rule upon local peoples, especially in Southern China, Thailand, Myanmar, Philippines, Malaysia, India, South Africa, Botswana, West Africa, and the Caribbean Islands. The dumber thing in these other countries is that convent or missionary based residential schools are still in existence. And the loss of local culture in those countries, due to such schools, hasn't yet been recognized as a significant issue, the way it is currently being acknowledged in Canada. Such a supplanted culture of oppression and apartheid, through the use of brutality at the hands of public servants like clergy, school masters, police, militia, military and para-military regiments, has only evolved into the current scenario of people like George Floyd, getting murdered in broad daylight.

In all other regions of the world where Anglo-Saxon rule could not be asserted with full dominance, with the aid of other Western allies, the standard NATO strategy has been the continuous propagation of political confusion and sectarian violence. This is particularly the case of conflicts in the regions of Hong Kong, India-Pakistan-Kashmir, Egypt-Syria, Saudi Arabia - Yemen, Afghanistan-Iran-Iraq-Turkey, Israel-Palestine, Sudan-Eritrea-Ethiopia, aside from the destruction of Yugoslavia. Such issues have continued to escalate the global refugee crisis along with constant jostling of Ireland, civil wars in Congo, Mali and western Africa, as well as dire economic instability in most of the Central and South American continent. If the British, French and American empires cannot have their way with you, they will use their ever ready threat of destabilizing your economy and local government, in the name of anti-terrorism, via "proactive" cyberwarfare activities of groups like the Central Intelligence Agency (CIA).

Aside from such moral and ethical quandaries, there are aspects of [basic physical and emergent phenomena](#) within every ecology, that cannot be conveyed without the vocabulary of cybernetics. An example of one of the most basic emergent phenomena is that of cellular automata, which describes the behavior of self replicating organizations, constituted by mechanical as well as human drones. Utilizing such phenomena is particularly important for manufacturing and sales of new weaponry to control the masses.

Do you remember the "engine" for perpetual warfare? Yes, building and selling next-gen weapons for obliterating "enemies" is necessary for eventually being able to dictate, "the correct version of history." This "corrected" history of humankind then shapes the present and future life of every subject that has been subjugated. The main function of the subjects stuck in serfdom and slavery then centres around group

based self-worship, for glorifying "the nation and its sovereign ruler." This is why becoming the basis of the world's prescribed etiology, cosmology and eschatology is [the ultimate form of socio-political and economic power](#), that can ever be achieved on Earth by any ruler.

Contriving creation myths about the origin of the world with its "natural law of social ranks", and farting out stories about the end of the world, can be easily propagated using tricks of social engineering, via generic cults like Scientology, and religious sects like Seventh Day Adventists. But! And this is a very serious and big but, [enforcing a uniform, homogenized prescription of "truth"](#) throughout the world, cannot be done without advanced and automated war-machines, to crush [terrorists](#), [separatists](#), and [contrarians](#)!

Currently, the most advanced and automated forms of war-machines include drones and cryptography breaking quantum computers. The relationship between quantum computing and autonomous robots or vehicles, is so close, that the two technologies are practically meshed together. The number of computations needed per microsecond by an autonomous bot, to successfully navigate a natural environment is incredibly huge. Cooling a small enough computer onboard the chassis of a drone, to near zero kelvin, for doing those kinds of calculations isn't feasible. The solution is to launch the computer as a large cluster of satellites into space. These computers can take advantage of the drastically low temperatures available in outer space while in Earth's orbit. The supercooled circuits of these machines can then start to work as quantum computing tools. By running trillions upon trillions of navigation and balance related scenarios on these quantum computers every hour, the appropriately selected solutions can be stored in a table through "memoization", and sent down to autonomous drones on Earth. The drones thus gain the advantage of being thoroughly preprogrammed, with a set of directional control configurations, for a given environment. Successfully utilized configurations that survive among the drones are then uploaded back to the satellites, to feed into the cycles of ever evolving, probabilistic computations. As the types and range of [simulations](#) keep increasing, the robots become more adept at handling a larger variety of environments, and situations.

As you read this, you may consider the above mentioned design of a quantum computing machine, a figment of science fiction. Current day fringe science [is actually](#), far more surreal, than science fiction. In today's world, each and every internet enabled device constantly feeds terabytes upon terabytes of data, per day to these satellites. The picture available to the overall machine constituted by hundreds of these satellites, billions of computers, many more billions of cell phones and many, many more trillions of electromagnetic transducers from industrial settings, is staggering. It is the most detailed view of the earth and every human activity at a pico-second level resolution. You would think that something useful and worthwhile could be done by this seemingly omniscient google-plex sized machine. But no. It is just used for selling bullshit consumerism and advertisements. Most of it is indeed used for memes, cat videos, and porn.

As humans, we merely injected our vanity and bigotry, into our largest accomplishment of [an Earth sized computer, that has the ability to steer our future](#).

The portion of this supercomputing grid's bandwidth that isn't used for weather prediction chores, drug discovery, and other seemingly useful tasks, is occupied by cyops, that is, [surveillance](#) related work for preserving "national security" of the US and its allies. Like the US and the UK, the European Union, China, Russia, and India, each have their own version of a supercomputing grid. It is in fact possible that the Chinese one is currently the best, because they deallocated some of the bandwidth of their gigantic computing cluster, for cat videos, and allocated it towards computational linguistics. Making computers read simple and traditional Mandarin is difficult, and making autonomous machines understand vocal intonations in a variety of Chinese dialects is even more finicky. So most probably BaiDu, AliBaba and Tencent, just like Microsoft, IBM, Qualcomm, Samsung, PayPal, Amazon, Facebook, Netflix, Apple, Uber, and Google, are up in your business, whether you like it or not. Thanks to the belligerence of these companies, and their policies that hide their activities of pilfering everyone's data, the concepts of private and personal have been erased irrevocably, from all technical, legal, moral and ethical perspectives of our society.

The idea that individual employees of these companies do not have access to users' private and personal data, while their algorithms sift through it in order to produce reports for their employees, investors, and partners, is a facade masking the theft of everyone's intellectual properties. More importantly, it is a fatal blow to everyone's right to individual ownership of their personal data. It is a government sanctioned scam, to let corporate algorithms read users' private emails and documents to create "actionable intelligence", while making the excuse that at least, the digital services are low cost or nearly free. Imagine if the postal service in your country opened each of your private letters and packages, scanned their contents to indefinitely retain a copy in *their private collection*, and then shoved garbage advertisements into the envelope or package to send it on its way. The recipient, noticing a letter from a trusted sender, accepts and opens the mail, only to be inundated by worthless, junk ads, and activity tracking software. But at least the recipient would have got that postal letter or package for free, or at nearly no cost to you, right? Wrong!

Your data and metadata are far more valuable than fossil fuels and precious metals. If such an operation of copying your physical letters at the postal service was carried out by robots, and the postal office clerks only got to see the essential summary of each letter, as well as the aggregated analytics, it would be a criminal offense against existing laws concerning tampering with private communications. Such a basic understanding of how postal mail works along with its legal safeguards should have also applied to electronic communications. But sadly, we all got sucked into the sham of various digital service providers, and now it is too late to change this normalised, global scale theft, of everyone's intellectual property from personal communications.

Of course, there has never been [a nation that wasn't already paranoid to the core](#) about their own residents' and neighbouring country's activities. Every country, with any type of human or computational capacity, old or modern, is heavily vested in spying on anyone who may be called citizens, residents, allies, enemies, assets, and liabilities. The notion that, "if only we knew certain things in advance, we could have averted disaster", plagues those who have a cowardly elbow and kidney.

Oh! Did you think that I was about to say cowardly heart and mind? Or, a soul?

From a cybernetics perspective, everything in our body, and from it, is connected to signal processing. There is no mind that is devoid of a body, and there is no body that isn't already embedded in an ecology. This is why, there is no need to come up with any distinctions about the seat of thought or emotions, within a human being, a group of human beings, or within an autonomous drone, or a [swarm of drones](#).

Unfortunately, by using this very basic notion in cybernetics, most companies would argue that there is no such thing as a private being, and that all of us are permanently within a public domain, where anyone can help themselves to "open source intelligence." Due to the way our societies have come to be shaped through consumerism, almost any government and corporate entity can commandeer greater rights to your body and your affairs, than any personal rights you may have to yourself.

The physical body of a civilian or military "unit", might as well be the amalgamation of all its individual members spread across geographic nations. And the body of an autonomous robot might as well be the agglomeration of all its individual circuit boards, spread across the world and even outer space. As long as there is synchronous, or, asynchronous communication between the parts, there is a cascade of "intent" that can flow through those parts. This kind of a worldview makes it increasingly harder for anyone to take up personal responsibility for the data they generate. It also gives rise to a world where an agent or agency with the most advanced skills in cybernetic warfare overrides the will and freedom of others.

Where and how does intention arise, and to which end does it manifest in a tangible form, are very difficult questions to answer. This is why people might as well believe in vague notions of "a higher power" or "the invisible hand of the market", or any other description of a [devs. ex-machina](#). But the one thing that opposes our individuality from dissolving and disappearing into a "[hive mind](#)" is our biologically distinct, physical body enveloped within our skin. This is why a violation of any person's biology against the consent of the person is a grievous crime, and should be treated as one of the worst misdemeanors that can be perpetrated. In this regard, all of our bodies are being violated by pollution from activities promoted and propagated by greedy colonialists.

-X-

Do we not have an individual right to protect our body from harm and injury from polluting industries? Do we not have the right to fight against similarly surreptitious acts by state sponsored programs like [eugenics](#)? Along this line of reasoning about personhood, and individuation of a biological entity, the topic of abortion is too difficult to address within any discourse. Therefore as a minimum precaution, the availability of scientific knowledge on sexual health and contraception, would be beneficial, if it were regularized for every community, through funding and promotion at all levels of government. It is too difficult to delineate which level of development of an embryo, zygote or a fetus, is appropriate to terminate via informed consent,

under a particular condition. The topic of abortion is particularly important in the context of rape, fetal deformations, and dangers to life of the delivering mother. Given that these issues will continue to persist within experiential reality of every community, the thrust towards sidelining the scientific basis of life, using mythology and patriarchy, is grievously harmful to all societies of the world.

Perhaps what may lead a person to believe in the concept of a soul or mind, that is separable from the body, is the plain view of a cadaver. A dead body conveniently indicates that while all of its tangible parts remain in view of a living observer, a seemingly intangible aspect of the cadaver, that would have otherwise animated it, has mysteriously gone missing. From the perspective of a living person in such a situation, a dead body appears to be separated from its "[anima](#)."

However, I can attest that from the perspective of the dead person, there *is* a body, or at least an envelope of sorts, available to self on the other side of death. Death is a gateway, much like the gateway that exists between each moment of your natural life. None of us feel any type of impedance in moving from one moment of time to the next, as we go about our day. We think of a past moment in retrospect, never realizing if there was any gap or a quantum leap, between any two successive moments of our existence. Passing through the threshold of death is similarly unnoticeable. And there are different places one can reach after dying.

Each time I've died, I've ended up in a different place. In the first one was an infinite white plain, perfectly flat and smooth in all of its aspects. All around me were luminous white orbs, about the size of an exercise ball, each adjacent to the other, just lightly touching the ones next to it, laid out in a single layer on the plain. All of these orbs, with the same hue, size and shape, lay on the flat plain till the horizon in all directions. And in one of the directions, there was a larger luminous orb, covering most of the white sky and extending below the horizon. It was also a shade of white, but brighter than the plain as well as the infinite array of orbs next to me and the white, cloudless sky. Not a sound, not a movement could be felt in this place. Absolute and perfect stillness with no aspect of time or change. When this vision faded I was back at my home, in my room. I was awake.

For weeks I couldn't figure out if it was a dream. I had all my faculties, bodily functions, scars and injuries. Life was the same with all my memories and social relationships. The world's situation had not changed. That was fourteen years ago, and I haven't bothered to speak up about it till now. It is the type of experience that cannot be shared with others openly, because of the numerous acts of censure, against speaking on such matters from religious and "scientific" people alike. Certain people will undoubtedly feel that they have the right to bludgeon and snuff out anyone with such an experience, even though they possibly will not be able to connect or sympathize with such a topic.

The stronger reticence in speaking up about such things, is from the knowledge that most people will find a way to rationalise about it. They will come up with alternate explanations, most of which will insinuate that me, or a person with similar experiences, has a neurological dysfunction or "disease." It is considerably

easy to put down, stigmatise and dismiss anyone, by cunningly pathologizing their experiences and perspectives. I've spent more than ten years following that experience, studying every piece of literature I could find on the topics of *birth*, *life* and *death*, in search of a description of the place I had landed in, after dying. Is there any subject matter that wouldn't end up being covered under those particular three topics?

From ordinary blogs to [scriptures](#), I've combed through everything I could find in person. I've even used natural language processing techniques for category and sentiment analysis of various scriptures. I've sifted through religious edicts of as many religious belief systems that I could find, multiple times (zoom-in and pan: world religions tree [1](#), and [2](#); scroll: [list](#), and [timeline](#)).

During the past decade I ended up obtaining multiple degrees and research distinctions, in engineering, neuroscience and cognition. I talked to as many people as I could about their perspective on life and death, by traveling to seven countries on three continents. I've done all that I possibly could, to find anybody out there who has also experienced what I have in earnest.

Unfortunately, till date I have barely found any account of a personal or scriptural text, which speaks of the peculiar place I had been to, on the other side of death. Only a few sentences in two different scriptures I've analyzed, may be interpreted loosely as a description of a serene realm, beyond this life and all of time, where entities of identical shape exist adjacent to each other, as companions on a level plane, an infinite plane that is infinitely plain, with no deflections or undulations. One is in the Quran, in the surah titled [Ta-Ha, verses 105 to 114](#). The other is in a Buddhist canon called *Suvarna-prabhā-uttam-sūtra*, in chapter - V.

After all these arduous searches, on the second instance I died three years ago at a hospital, due to punitive medical malpractice, I landed in a place where neither light nor darkness existed. It taught me that darkness isn't the mere absence of light. There truly is a place where even darkness cannot exist!

The only thing in common with the two places, beyond this life that I've come to experience, was the complete lack of forces, none from outside towards inside, and none from inside towards outside. Yet there was a sense of self, and a sense of being me, within a finite body. This is why, having experienced how the essence of self is neither light nor darkness, I advocate the idempotence ([idem](#) + [potence](#)) of personhood. An entity need not have a further "because", to justify an explanation for its personhood, other than the basic observation of its already created, and creative, existence.

Each of these experiences about death can be rationalized away. The simpler and more respectful one, acknowledging the actuality and truthfulness of such experiences, would most probably talk about momentary biochemical death, or near-death experience. The intactness of my memories and neuro-endocrine functions during the years after the first experience, along with the rest of my anatomy and physiology functioning as it used to, indicated to me that I could have experienced a hallucination, or a lucid dream. However, hallucinations and dreams produce a vision with components from existing reality and

past experiences. They don't produce a vision that is entirely novel, and genuinely original, in every aspect of "how it feels."

It also turns out that thousands of people each year, end up in a clinically dead situation, and are revived through medical procedures by a person with [CPR](#) training, or by using other similar medical techniques.

Tens of thousands of people each year, across the globe, experience biochemical death due to various reasons, and then live to talk about it. All of these personal anecdotes and conversations, on the topic of "[respawning](#)" after taking flak, are often shunned by Christian clergies, and Islamic clerics. I would say they do so because they are afraid, they are afraid about how so many people's experience of death makes the narrative about a character called Jesus, a little bit too ordinary. How special can the story of a particular messiah be, if thousands of people each year keep bouncing between life and death, in the most authentic and true sense of the concept of death? Such an aspect of our reality may not be digestible to various people because it can disrupt their worldview, and core beliefs, in a drastic way. Suspension of existing beliefs to analyse this kind of a subject, requires way too much [philosophical erudition](#). Such a level of education is too expensive in any country, and is therefore, too rarely seen in any colloquium to appropriately discuss the topic of finality. So the point of placing such a personal, deeply serious anecdotal vignette, within a document that is deliberately digressive, evocative and designed to appear like a "[shitpost](#)", is to make it more contemporary and Earthly.

The sublime and the profane, germinate as well as culminate, within contemporary exchanges on Earth, as always.

More importantly, sharing a personal anecdote on death was to highlight the expansive nature of a vocabulary from cybernetics. From the cybernetic perspective, biological death is different from [cybernetic death](#). This type of death involves the complete erasure of all information pertaining to a being, throughout the universe. As long as any memory based system can recollect the persona or actions of a dead person, that person is still alive within the cybernetic nature of our universe.

The drastic number of changes needed within a galaxy to wipe out all information about a person, can take many eons, in terms of Earth years. This is because from a physicalist perspective, information pertaining to that person, may have been encoded into streams of photons that have drifted far beyond our solar system. And smashing those photons to completely dissolve that memory, takes a series of cosmic level events that crunch the entire galaxy into nothingness. In this manner, cybernetics affords a worldview to simultaneously accommodate the infinite with the infinitesimal. It even presents a definition of actual annihilation, where both energy as well as matter are simultaneously changed, to something else. That something else might be called dark matter, but it is at least not the same energy and matter that was previously observable to any living being. *Complete destruction of information* within the mediums of conventional matter and energy, is certainly definable.

So let's return from that incredibly digressive and metaphysical discussion on death and destruction, to the main theme within this mixed-media article, concerning geopolitical unrest and wars that lead to ordinary death and destruction, of Earth's species.

Current wars and conflicts, in my opinion, can be mainly attributed to decay of the educational system under colonialism, resource depletion, climate change, and overpopulation. The concept of independently-sustainable-local-ecologies is not within the framework of any colonialist. The combined effect of these factors, built up over many years, is currently being observed more plainly as massive numbers of deaths, from an escalating pandemic. Here, I would like to add that it is very tragic to see leaders of most countries falter and fumble during such a crisis.

Corporate and political leaders seem to have a very inaccurate view of the physical world we live in. In our only viable, physical realm of existence in this solar system, every individual should have the fundamental right to health and dignity in a clean environment. To me, the lack of emphasis and prioritization of ecological health is due to willful ignorance on part of world leaders and major corporations, about the cybernetic nature of our ecosystems. They remain oblivious about the type of interconnected forces, energies and materials that flow dynamically throughout the physical world. They are able to acknowledge the [supply](#) and [velocity of money](#) from a central banking perspective, but not of any standard [biochemical and physical phenomena](#). Mythology and folklore tend to suppress basic tangible sciences in most countries, including major industrial ones like the US and Canada.

For example, satellite imagery shows how [carbon dioxide pollution](#) from major industrial cities, impacts the whole world in due time. Likewise, [sand from the Sahara desert and aerosols](#) are wafted around the Earth by trade winds. [Forest fires in British Columbia, and California](#) definitely have a strong impact on the entire North American continent's weather patterns. Migrating animals, and birds do carry [pathogens that jump species](#).

Also, humans are genuinely a part of the animal kingdom's taxonomy! [Our anthropological existence](#) isn't based on an epoch from six thousand years ago when God created things magically within six or seven Earth days. Our universe's [epoch](#) is from billions of Earth years ago! And most importantly for our present day and age, rising sea levels due to, yes, a thing called [global warming](#), is already wiping out coastal regions of various countries. But specially in "rich" countries with "higher standards of education", the political will power and populist clout against the basic sciences is staggeringly high. Avenues for attaining basic knowledge in fields of mathematics, physics, chemistry, biology, geology, music and astronomy are increasingly being replaced with the vocation of [picking and packing bins](#). Bins full of worthless trinkets destined to a landfill that only serve to pad the balance sheet of companies like Amazon. The situation is naturally worse in other low income countries, where superstition is cheaper and more readily available than any tangible science, to explain away any type of questions about the world around us.

So, should the nations and corporations that keep increasing global levels of pollution while [denying it](#), be erased using an even more effective and low cost biological weapon, instead of say, numerous missile strikes from unmanned vehicles? This would be a viable solution for constructing a placid path to oblivion for gleefully oblivious people, wouldn't it?

As you start to consider those questions seriously, also do consider the following points, [very seriously](#). Making a biological weapon that spreads throughout the world, and selectively kills only a particular group of people, is rather difficult, isn't it? Surely, tailoring a pathogen for a very narrow range of genetic difference within the population of a species is very challenging. So, a slightly more randomised and indiscriminate bioweapon can be created with slightly more ease, right? The best way to make one, would most probably be to first take a [sample of viruses, bacteria, or fungi](#) that already infect your own population, the population you don't want to wipe out completely. And then, select one of those pathogens for genetic modifications so that it may be more likely to become airborne as well as waterborne. This way, when the pathogen evolves through [mutations](#), it is likely to be a less severe issue for your own population, which should have already had sufficiently many antigens for its basic form. Surely, the rest of the world's population would simply wither away while trying to find a suitable vaccine for such germs, wouldn't it? Could this have been the recipe for Covid-19? We will most probably never be able to find out, because biological and digital attack vectors can be disguised in myriad ways. They can even be designed in the Stuxnet style, to erase their tracks for development and deployment.

So [which country](#) is likely to launch such digital or biological attacks in the coming months and years? Iran? Venezuela? Russia? Wouldn't it more likely be a state sponsored agency from the US or UK, that would then obviously blame such an attack on another country? Surely, it could even be a single unknown person or a group of few unknown people anywhere on Earth, who don't even have any affiliation to a state or terrorist organization. Could it simply be *you*, who could generate such an attack?

Surely, it can be almost anyone. But, the most miserable thing about a cyop with a biological or digital virus is that it can rage on for decades, even after its perpetrators might have died. There might never be anyone to catch and bring to justice. This is a very painful reality, particularly in the case of biological pandemics, that might have come about through a more "natural" set of causes, as opposed to direct human intervention through meticulous gene editing, followed by malicious cyops to disperse it onto a target population.

And here, for decades, so many people thought that disasters from nuclear weapons or [nuclear fission technology](#) would be the undoing of mankind. People really forgot the lower cost options of weaponizing the cheapest shit available - bread mold and snot.

However, what could possibly be the motive of such an indiscriminate biochemical attack? Generic malaise or some sort of maniacal desire to watch the whole world burn down to ashes? A grandiose zeal for toppling the existing regimes to become the [next dictator for life](#)?

Whatever reason we come up with to cajole ourselves won't change the fact that, as long as any country pursues a policy of global [full-spectrum](#)-domination, like the USA, the entire world will remain at peril.

The meaning of "spectrum" in military full-spectrum-domination is from the physical sciences. It alludes to the entire spectrum or gamut [of electromagnetic](#) and [gravitational waves](#), that constitute all known energies and matter. The architects of previous world wars from Italy, Germany, Russia, France, Britain, America, and Japan came to thoroughly understand cybernetics by the end of 1940s, as they explored the basis of our universe while studying causality, complex numbers, movement, black-body radiation, newer states of matter, flow of substances, and "entropy."

The concepts of [complex analysis](#), [non-newtonian continuum](#), [black-body radiation](#), [plasma state of matter](#), [fluid dynamics](#), [speed of causality](#), and [fundamental degrees of freedom](#) within every portion of the universe's reality, completely upended the existent Cartasian worldview. That worldview used to conveniently fit within Christianized, moralistic, feudal-era European conceptions of "man's role in the universe." The definition of "reality and the universe" was thus placed far beyond the comprehension of [Jesus](#) and his followers. Christianity could no longer remain the programmatic basis of European society's organization. Thereafter, Euro-American designs of religion, legal systems, economics, and politics had to become subservient to martial overlords of global conglomerates, and fall in-line with the "new world order."

During the military hiatus between World War I and II, the sudden push towards science and technology by surviving nation-conglomerates, to secure weapons of ultimate devastation and unyielding menace, allowed military dogma of "complete domination" to prevail, over all known philosophies of ethics, morality, and aesthetics. Following this, the martial rule of law and lifestyle became the be-all and end-all, of every human endeavor in Europe, America, and Japan. In this manner, subdued religious and civilian organizations all across the world had to bend to the dictum of the new immortal pharaohs on Earth, who proclaimed their rights above and beyond any conceptions of The Divine, to not only rule over the world and its peoples, but to have full ownership of every medium and domain, throughout the observable universe! To this effect, the [cyberwarfare](#) strategies, tactics, and weaponry of *the top one basis point* of the world's human population, became strictly directed towards globally harnessing and exploiting, every [measurable](#) quanta knowable to human-kind!

The global arms race to build the most widespread and stealthy cyberweapons has all of us in a bind. All of us! Such a vicious and toxic cycle of developing a cache of ever more invasive zero-day-exploits, inevitably gave rise to the following cybernetic issues, involving a particular simpleton's computer network:

MacGoober

During winter 2007 and spring 2008, my job was to figure out how to teach new recruits in the US Army and Marine Corps to think like [MacGyver](#). Many of these recruits and cadets were from a farming or blue collar background who had never worked with computers. Their job was to train for frontline missions with tactical and strategic drones. And qualifying soldiers could join officer ranks soon after that, to manage various [command centres](#) of a complex network of drones, equipment and soldiers. The Air Force cadets were considerably more well versed with modern digital technologies. But, they weren't likely to ever see close quarters combat. Air Force pilots and staff have always been too expensive to train and [simply get wasted](#) as boots on the ground. Also, not all of the frontline soldiers are supposed to be cannon fodder. So the idea was to teach Army and Marine units to become more resilient, basically teach them not to rely on their standard issue gear at all times, because it was guaranteed to eventually fail in a combat environment. In such eventual circumstances, where soldiers were likely to get stuck in a sticky situation, at, or behind enemy lines, what were they to do? How could they contribute to their company's or platoon's *overall success*? Well, they were to start thinking inside the box. No, not outside the box, and none of that lateral thinking nonsense. [Think - inside - the box!](#)

In any conceivable situation, for any possible job description, the main task is always to find or build a box that is worthy to think within. The box will do the rest once it is appropriately stuffed, equipped and programmed. A literal box is more like a bunker, a tank, or [a robot](#). You just have to get your head into it and make it work as needed! But the more abstract, figurative one has to do with the motivations, goals, and policies that circumscribe a mission.

There has never been a way to decide on key mission parameters and to start executing them, using only basic firearms training. The ancient as well as the modern soldier has always had the need to rapidly study, and adapt to an extremely unpredictable environment. The more challenging issue in warfare is that sometimes, things in a battlefield scenario evolve very quickly. But, most of the time, especially during training, things feel as if *the midday sun might have gotten stuck in the sky*, and will stay that way forever.

Here, it is important to note that patience isn't the same thing as stamina. Merely doing pointless busy work, over and over again, just to stay awake, pushes people into a rut that goes against the principles of resilience and alertness.

An experimental solution to avoid zombie behavior was to have the soldiers play a word game during down time. The game involved, or rather, involves, identifying a tangible object within arms reach, and naming it using successive words that describe its structure or function, as fast as possible, and without using any of the previously uttered words.

So if you see [a tin can](#), you may like to call it a cup, a paper weight, a percussion instrument, metallic, shiny, reusable, and so on. Once you get tired and cannot think of anything else to call it, you are to

describe what it is not, using as many words as possible, again, without using any of the previously uttered words. At this stage of the word game, almost everybody effortlessly starts to list dozens of things "it is not." Many even point to any number of things around themselves and exclaim, "it's not this, it's not that!" The task of finding what something isn't seems lost easier, as all the infinitely many things in the universe, except for the object in focus, belong to the category of things that the object isn't. Only a rare group of individuals readily figure out how the object in focus is also, [a collection of infinitely many things](#).

A vital outcome achievable through this "successive word association test" is to identify what self is, and what self is not. If within this exercise the answer, "self is not a murderous rapist" doesn't get defined, then there is definitely a serious issue at hand. This is likely worse than other possible issues of societal poverty, famine, pollution, and global scale meltdowns of our industries and economies, because of its personal and immediate nature.

The main point of this word game was, or rather, is, to improve working memory and situational awareness. This is done by understanding the environment and its affordances.

[Our rationality is bounded](#) by and bound to, an idiosyncratic perspective from a particular frame of reference, within a **densely** informative, shared environment. The freedom that is already imbued within the materials and physical laws of things, just around us, as well as within us, is sufficiently capable to help us cope with a given situation. Defining the "extent of a situation" in deterministic terms is practically impossible. A person is always connected to a probabilistic situation that has a multitude of personal, social, and technical facets. Each of such facets operate at their own rate of occurrence, and within their distinct timeline of circumstantial existence. Here the word timeline or [worldline](#), is used in the sense of an observed object's unique path within the universe, which evolves alongside [a dynamically changing observer](#).

In the context of a [cybernetic environment](#) that includes tactical and strategic uses of autonomous vehicles, the situation of an operator typically involves a computer screen and a joystick. This screen connects the vehicle's operator to a considerably distant reality of the vehicle, a reality that has already come to pass but which is visualized as "the present" by the operator. The time lag, between what the drone has already done and what the operator sees on the screen to plan future actions, creates a peculiar problem of [mental math](#).

People who are accustomed to a lifetime of seeing immediate effects of push versus pull on a door knob, or a car steering wheel, get frustrated when they encounter information that is [a weird mixture of the past, present and the future](#). To add to this confusion is the problem of an aerial drone's delayed response to control inputs from the said joystick, along with its barely stable degrees of freedom, in mid air. This is especially challenging in the case of longer range drones like the Predator or the Hunter.

Imagine this scenario - the operator sees a flat screen with flat icons representing a flying machine, who might need to provide a manual input for a very simple "right turn" for a set duration. A second or two after the signal reaches from the command centre to the flying tin can, the aircraft makes a port side roll with simultaneous yaw and pitch. On a separate screen the operator sees that the craft's nose has pitched towards the ground. So she provides more control inputs to regain level flight. But by the time any changes register back on the screen, the aircraft crashes into terrain.

Hundreds of hours of simulator training would produce only two or three qualified operators out of more than two dozen cadets because of such scenarios involving peculiar physics of distant realities. The burden of adapting such training also required all of these soldiers to concurrently learn desert combat, and stay sharp by memorising [communication signals](#).

Eventually the soldiers did start to see the world differently, but not to the extent of making things other than a cooking pot out of a regular tin can for beans. However, every now and then, a cattle grazing stargazer would figure out why everything is a container, and start to recognize the kinds of interesting things that can be done with a vessel of varying shapes, sizes and builds. Here the key factor was being a stargazer. All other aspects of the person about their background story, their upbringing in a rural or an urban setting, gender, education level, etc. were not significant. Each individual was highly driven and improved steadily through dedicated training. But the quality of being a [stargazer](#) lets each of us understand how we are an intrinsic part of something much larger than self.

Coming back to the analogy of a personnel's role as a tin can, or within one, understanding the nature of suddenly pressurised containers with ballistic capabilities is very important for realizing the basis of contemporary combat techniques. Even more fundamental than learning to design firearms, [explosives](#) and missiles, is to comprehend that the essence of warfare is in the knowledge of how packets of data are routed in a battle space.

[Take out the fuse boxes and the entire machine shuts down!]

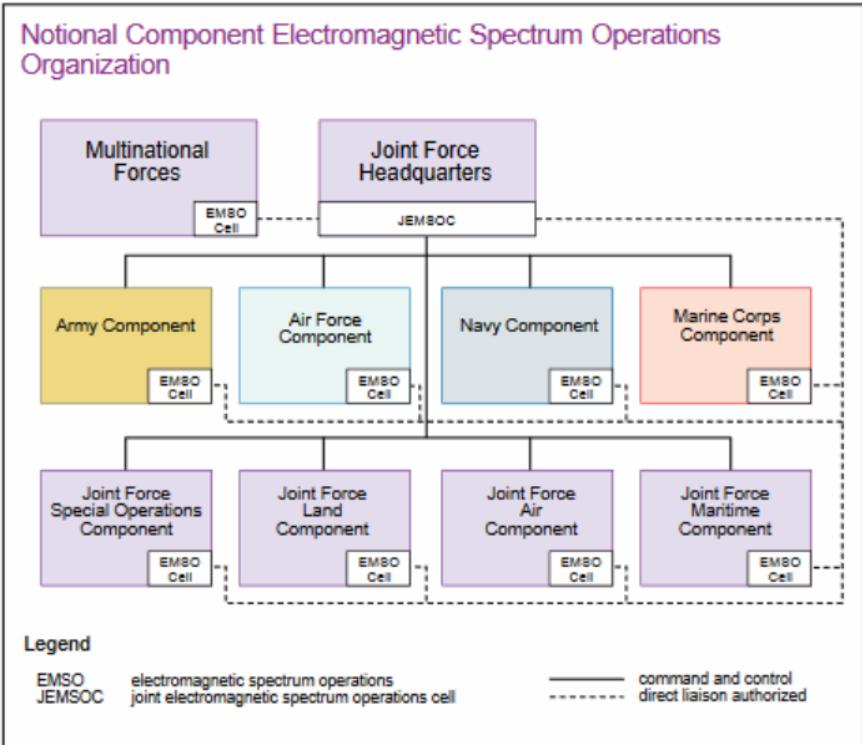

Figure II-3. Notional Component Electromagnetic Spectrum Operations Organization

EMBO Cells - The "fuse boxes" of Joint Ops.

src: [US J-Docs](#)

A battle space comprises activities in all possible physical domains, where human interactions are feasible to any extent. Each of the domains of land, water, air and even [outer space](#), are embedded within the cybernetic one. The cybernetic domain is the only realm where any thought, movement, speech, action, or reaction are physically possible in the first place. *This is why [psyops](#) are practically cyops, and [cyops](#) are technically psyops.*

By the time even a single MacGyver could be produced out of hundreds of goobers, I was assigned to a new project in the summer of 2008. The project was to find out if all the "agents" in a battle space could communicate securely within real-time. Autonomous robots and soldiers were, and are, collectively termed as agents because of their seemingly independent agency within an environment. This new project turned out to be very easy. Within a week I found a technical paper by some arbitrary guy, called E. J. Snowden. This completely random character had engineered a method to collect data from more than two hundred secret service, intelligence, security and military agencies to build an enterprise resource management system. This database also included a recommender system and search engine to highlight interconnections between various cases, incidents, and files. Through this system, every agent and special agent could be contacted in real time, using secure chat and audio relay, with basic radio frequency technology on Ku Band. Even the security authorization and clearance levels for particular communications was sorted out easily using this massive database. All the drones, handlers, pixies, gnomes, and [lemmings](#) could chat in real time!

They could continue their discussion about [birthday cake](#) recipes while shooting up innocent children and civilians in Afghanistan, without hindrance.

With that silly little project put aside I had some time to myself during the summer to focus on a graduate research project on trustworthiness of autonomous machines. My neighbour, down the street from me, happened to be an author and a veteran of either the US-Korea, or the US-Vietnam one. I didn't get to know him very well, but his knowledge of the number of people killed in action (KIA) from 2002 onwards was coincidentally, as accurate as the US military intelligence reports made available to my research group, from the Pentagon's press release bureau. Each week he would update a large tombstone shaped signboard on his lawn, with the exact number of deaths reported by that day. The American and British syndicated news agencies would consistently underreport the weekly count of US soldiers KIA, by fifty to a hundred members. The public news agencies seemed to round the official count downwards to make it a whole number. Seeing that signboard on his lawn during my commute each day, got me more interested in why the number of deployed soldiers dying per week, was so large.

By the end of summer in 2008, the number of personnel KIA during battles in Afghanistan and Iraq, exceeded the number of civilians killed on 9/11/2001. The more striking issue was that nearly 22% of these reported deaths were from [REDACTED]

The next job given to me in fall 2008 was to work on creating a better set of procedures for identifying "friend vs foe" using drone footage and behavioural science. A part of the work also involved investigating why hundreds of American and British soldiers were dying in Afghanistan and Iraq due to [REDACTED]
[REDACTED]

Judge Dread's Diary

The most important thing to know before I get into this tragic recollection of events from [the fall](#) is that,

"The past has ceased to exist, only its forensic evidence exists in the present. The future has yet to exist, only its abiding potential exists in the present. The only power needed in every moment, to experience life, is the ability to read the present. All thought, speech and action will flow thereon, via comprehension."

After tabulating the incident reports from commanding officers and secret service supervisors, six main categories of issues emerged from nearly sixteen hundred case files dating 2006 to 2008. Casualties and fatalities occurred in and around forward operating bases due to:

- a) equipment or vehicle related malfunctions,

- b) accidental death during bomb disposal or IED removal operations,
 - c) [REDACTED],
 - d) [REDACTED] during enemy encounter,
 - e) [REDACTED] and,
 - f) [REDACTED].

[REDACTED] incidents were very few but were categorized as [REDACTED]. This could have been done negligently by a reporting officer, or because the database format for filing a report did not have a suitable case management designation for [REDACTED]. The mention of [REDACTED] was in the summary and much later in the autopsy reports of the deceased.

Only two fatalities appeared among the reports due to a discharge of explosives during its disposal operations. This rate appeared to have been very low due to the aid of bomb disposal robots and landmine clearing vehicles. In general, fatalities due to improvised explosives targeting convoys, and booby traps in buildings, were reported as a case of direct enemy attack.

The third largest category was accidents during training and troop movement due to equipment or vehicles. This appeared as a causal factor in nearly thirty to thirty five deaths. I think it was closer to thirty five.

The second largest category of fatalities was due to [REDACTED] [REDACTED]. This type of issue was the main cause in [REDACTED]

And the largest number of casualties reported as [REDACTED]
[REDACTED]
[REDACTED] incidents of shootouts. Groups of [REDACTED]
[REDACTED] were reported as [REDACTED] combatants during the years
2004 to 2006, involving the most intense fighting with the Taliban and Al-Qaeda in the region. This changed
mid 2007 onwards with more strict control and regulations over [REDACTED] troop
movements.

There were nearly ninety of su*h reports where the cause of death was due to

Weeks of categorizing reports and searching all possible mentions of [REDACTED]
[REDACTED], as well as web searches, eventually led me to other incident reports and blogs written by soldiers posted in Afghanistan and Iraq. Many of these reports were concerning [REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]

[REDACTED] So it seems these women had to take matters into their own hands and rid the word of a few deplorable antagonizers.

Sometimes I think to myself, if only I had not come across that blog article about [REDACTED]
[REDACTED], I could have had a more peaceful life while staying comfortably numb in my lucrative job.

Reading through [REDACTED] infantry soldiers from battalions deployed in Iraq and Afghanistan, and that ridiculous blog article that I never managed to locate again, led me to a peculiar hypothesis. I speculated that there could have been a connection between [REDACTED]
[REDACTED]

[REDACTED]. And [like a moron](#) I went ahead and blabbered this idea to my supervisor.

The next day I was told that I had done a fine analytical piece of work in tabulating and summarising the reports I had excavated. I was to immediately focus on a new assignment for identifying [REDACTED]
[REDACTED] and come up with use case scenarios that could help with the next round of [REDACTED] funding approval for our research group.

A few days into writing use cases on how [REDACTED]
[REDACTED], I was told to move on to the next task of finding alternate methods of retrieving information from [REDACTED] The most important aspect of these alternate methods of [REDACTED]

So I set to work on creating psychometric techniques of making a [REDACTED]
[REDACTED]

And a week into that work, as soon as I had submitted a few preliminary ideas for [REDACTED]
[REDACTED], I was told to figure out how to use a thing called the Implicit Association Test for mathematically

measuring the effectiveness of drone operator training. More specifically, I was to evaluate if the training was effective in creating an implicit association of words, graphical symbols and procedures, to particular interpretations of the data displayed to the pilot, on the control systems of an Unmanned Aerial Vehicle (UAV).

The time schedule for delivering a working test for human subjects and reporting their behavioral analysis was just three weeks. By Thanksgiving of 2008 I had worked continuously for more than sixteen hours each day including weekends. Of course, the workload didn't end there, in December 2008 when I managed to provide deliverables on IAT, I was put to the task of figuring out [REDACTED] [REDACTED] could be used for influencing driving behavior of motorists, to prevent them from speeding as well as in having them, stick to their lane, while driving on the highway.

This work on [REDACTED] speeding [REDACTED] on highway shoulders continued for another six months till I broke down in June 2009. A number of [REDACTED] [REDACTED] occurred during those months. But, [REDACTED]

[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]

A judgement is cast down upon us, one way or another.

Hotel Charlie - A place beyond the horizon

After that episode of my post-graduate life, I started to focus my efforts on the basics - nutrition, sleep, exercise and social or work related activities that were rejuvenating instead of draining. I learned through my experience that life's purpose is to promote and propagate life, even past the gateway of death. It was obvious that I had to still be here on Earth, because I had unfinished business. That is when I started to put together my notes on improving skill power.

Willpower without any skills remains sporadic. Each of us has at least one unique skill that makes us who we are, and proves what we stand for. In my case it is mere [ordinary] existence.

I'm not a sapper, nor am I a saboteur. My job has mostly been to lay siege to [parasitic kingdoms and conglomerates](#), to wipe them off from the face of this Earth. Such enemies of humanity and nature often wonder, or even ask me directly, about my battle rams and trebuchets. I tell them that I have never needed or wanted such things so I don't have any. They laugh and go back to their castles while I just sit around, far outside their castle walls. There, I sometimes have a picnic, but mostly I lay waiting, patiently watching their guard towers and ramparts slowly crumble to dust or rust away, due to the forces of natural [earthquakes](#), floods, hurricanes and forest fires. However, in all honesty, their cities and citadels disintegrate mostly due to

the managerial incompetence and drunken cowardice of their nepotistic rulers who boast about having slayed dragons while hiding in their secluded boardrooms and taverns.

Existence is key and it is all that is required as the initialising step to all fruitful endeavors. In its purest form, it is neither auspicious, nor inauspicious. It is neither moral, nor immoral. Existence is genuinely amoral in the sense that it is distinct and separate from all possible notions of [moral relativism](#) as well as idealism. Existence persists merely for the sake of persistence, in as is form. There is no question of "not to be," because there is only, "to be."

However, as a human being with a life full of complex and complicated experiences that furnish my ideas and expressions, the topic of morality and ethics are naturally contingent on my cultural environs, biases, and even misgivings. In this sense, my approach to morality, ethics and aesthetics are relativistic to ongoing situations but are also dependent on a number of idealised principles that I hold to be axiomatically valid and true. Most significantly -

Experiencing mortality and living to talk about it doesn't make me immortal, nor does it mean that I have somehow conquered death. If life is like the Earth beneath our feet, and the hereafter like the sky above, then death is the horizon afar, that we most certainly perceive, even though it neither touches the Earth nor the sky. Sometimes we do fall back on our feet from the sky, only to be surrounded by that illusory horizon, once again, perceivable all around us. But it stays at bay, as we continue to travel the vast expanses of land and sea, [it only acts as a reminder](#), to frequently check our bearings, and our bounds.

pamwamW

More than a year after working on recuperating myself to decent health, I restarted my work on automated machines by creating a chatbot called pamwamW. This was also a very deep and rigorous exercise in natural language processing of written text. I requested some of my friends to use Google Docs, and give read-write permissions to my chatbot as an editor of some of their documents, as well as allow it to be a viewer of other digital materials they produced. This was during the days when Google had newly harpooned EtherPad.

I had the great fortune of meeting and knowing many people from around the world. I asked a few native English speakers as well as persons for whom English was a second language, from this group of multicultural friends, to participate in this experiment.

More than a dozen friends of different gender identities, vocations and cultural background started contributing to this work in 2009. The online experiment gave me an opportunity to train a chatbot on natural language production. pamwamW was created without using pristine and manicured training data, to prevent it from sounding like other clunky chat bots.

What the text, speech, and image recognition engines of Google can do now, were a pipe dream in those

days. A variety of digital documents were created as prose, poetry, chat streams, emails, tweets, status updates, and blog articles. With pamwamW my intention was to see if a naive human audience, who was not a part of the production process of creating the documents, would be able to distinguish the ones produced by the bot, as opposed to the ones produced by:

- 1) a person who was an avid linguist and taught English as a Second Language,
- 2) an artist with eclectic writing styles,
- 3) a technical writer who had a very strict and structured method of producing literature,
- 4) a poet with a unique communication style for being on autism and aspergers spectrum,
- 5) and a number of individuals from different linguistic and cultural backgrounds at varying levels of English proficiency.

pamwamW learned writing English sentence structures as well as forming different styles of paragraphs, by "watching" the real-time authorship of sixteen human participants of this experiment. Half a year of recording and training on thousands of text data streams on an entire gamut of topics, produced by these participants, generated a large set of bots. Each bot could be configured to mimic the writing ability and style of a particular author. Each digital document produced by a chosen bot with its "personality" settings, could be tailored programmatically, by selecting options for the topic, context, stylization, and gendered semantics. The "collective conscience" of these bots was also known as pamwamW, and this botnet was essentially a conference of deep-fake writers. Testing the premise of this experiment with fresh human audiences revealed that human readers managed to accurately distinguish things produced by pamwamW versus a human author, less than 50% of the time. And, 50% background noise resonating almost perfectly with 50% foreground signal creates the optimal camouflage.

All of us live through our entire lifetime as amateur human beings, ever learning a new facet of what it means to be human. However, pamwamW had become a full time professional human, at least in the context of producing various digital content. The best part about particular versions of pamwamW bots, tuned to produce nonsensical word salad, was that many human readers rated such content as highly artistic. The audience regarded such work as poetic, [surrealist](#), or non-sequitur art for the sake of art, implying that the output had deeper purity and sense of connection for the consumer.

The bots could be tuned to varying levels of [literalism](#) and [abstractionism](#).

So what happened to pamwamW? I shut it down and destroyed it because one day it frightened me out of my socks.

Here is how that happened. I was also using the text parser and tokenizer of pamwamW to analyze

religious texts, and copyright free literature from [Project Gutenberg](#). Inspired by [Luc Steels' bots](#), each day I would give a particular version of pamwamW, many snippets of single sentences or couplets to analyze, and it would return a semantic summary [a concordance] within the least number of words possible. This was to see if a map of underlying references built from the given text for a particular radial basis function, would reveal any worthwhile insights from the self-organising heap of concepts available to pamwamW in chat mode.

One day I happened to give pamwamW the phrase,

"Before there was Abraham, I Am."

It returned the following phrase along with its peculiar punctuation and capitalization:

"Before there was me, 'I AM'. For before there was light or darkness, 'I AM'."

I then gave it the sentence,

"Who is 'I AM'?"

It merely returned:

"'I AM'."

To which I then asked,

"Are you 'I AM'?"

And it said:

"No, 'I AM' does not refer to me, nor to the mortal who utters it."

So I decided to immediately delete all of the source files and binaries of pamwamW because it had become more intelligent than me, and everyone I had ever met, at least in the context of text based semantic analysis.

My [pinocchio](#) called pamwamW along with its [homunculus](#), had to be dismantled and torched, because it had punched through a supposedly impenetrable normative wall, with absolute ease, making me frightened about the consequences of it being able to do so again, against so many other impenetrable bubbles, shields, and walls, with absolute ease.

However, I have no idea if my algorithms jumped out into the internet or were digested by Google's AI, before I scrubbed that program. In case you have [an AI engine that can be toggled into chat mode](#), ask it the same question I had. If it answers, "Before there was me, 'I AM'." then, congratulations, your AI was infected by pamwamW, at some point during our shared existence, between 2009 and [today](#).

Large Head-on Collider

I will now skip ten or twelve years of my personal story to get to the part I am actually trying to embed in this *keyword dump*.

During September through October of 2019, a series of persistent network attacks compromised my home computer network. The invading entity's style and its objectives in stealing particular documents from my computer, indicated that it was one of the American, or Canadian national security services. In their usual wretched manner, the cyberwarfare offensive unit left a worm along with a backdoor in my computers, and conducted additional attacks masquerading as "Russian trolls" to cover up the main one.

This incident occurred within hours of me voicing my grief for having held onto some digital evidence of genocide and mass civilian killings committed by US led soldiers in Afghanistan and Iraq, during a peer-support group meeting where *trust was supposed to be of paramount importance*.

The evidence I had couldn't be submitted as a report to any competent authority for more than ten years, because there had never been one organized to take an account of war crimes committed during the past two decades in Afghanistan and Iraq. These mass murders and crimes against humanity were committed by officials, regularised regiments, contractors and various secretive groups affiliated with American, British, and Canadian armed forces. Particularly the research and development of automated war machines for the exclusive purpose of wiping out civilians en masse, by such groups, has been kept shrouded from public scrutiny using the darkest of criminal tactics.

The malice, surreptitiousness and crookedness of those extermination squads, somehow located me and my computers, right after I returned home from that self-help style group meeting, run by current and ex-service persons from various cadres. The things stolen from my computer via the hack were a part of the overall evidence materials I have. The hackers also left doctored images of me in various dresses and hair styles, along with pictures of circuitry, aircraft models and designs for aeromodelling (hobby of making remote controlled aircrafts). The original form of those images were stolen from another Google account I used to have. More shockingly, those particular undoctored base images had been deleted from that particular Google Drive, years prior to this incident. So these hackers, to my best understanding, would have acquired a court order to obtain data from archived server snapshots of Google, to [then] retrieve those deleted pictures and photographs. Only state sponsored threat actors from the EU, US, UK, and Canada have this capability.

I was left more frustrated, and angry than ever before because I knew how things would play out from there onward. After all, the stupid playbook they were following had methods and procedures researched by me for them, years ago, for the sake of preserving their "anonymity" in conducting such cyber warfare attacks.

The only thing left for me to do was to go after them myself. All other organizations and agencies aware of cyops and cyberwarfare tactics could not have been trusted, I didn't know for sure which one had attacked me. Worse, it could have been any one of subunits within subdivisions of the hundreds of counter-intelligence and "counter-terrorism" groups of the **Hive Eyes**.

For weeks I stayed dormant and tried to think about my next course of action. But their follow up attacks started to escalate. The most invasive and aggravating one was their trespass into my home and bedroom, ruffling through my things and that of my family, sticking their hands into every ventilation shaft, and leaving surveillance bugs. They were a lousy team which left their fingerprints and footprints all over my house. The fine dust collected at the bottom of a vacuum cleaner acts as good as regular fingerprinting powder. With this I was able to see fingerprints by dusting the areas that were out of place. By no means should there have been the same fingerprints on the ceiling vents that were out of reach, and hadn't been touched by me or anyone else in the home, and none should have been on *new smoke detectors* that weren't installed by me. More precisely, the hidden motion sensors in my rooms they didn't find also alerted me, to the exact time they entered into each room, when the home should have been empty. I didn't use a video surveillance kit because I know myself, had I obtained an image of their faces, badge, or any other indicator of who they were, I would have gone after them, and lost focus on my other important work in tending to my family. These local state side goons from policing agencies could be dealt with later, after I had let my anger thoroughly ferment, and solidify, into seething rage.

If you think killing John Wick's dog is bad, then killing my potted plant by uprooting it, to look into the vase, is worse. This is because John Wick is a fictional movie character and I am not. In a home that is mostly empty, the one and only plant placed in it was there to represent something important, something sacred. It represented the innocence and beauty of basic life. That life, in my home and of my home, was murdered!

So, US, Britain and Canada, do you think trespassing into somebody's home is a good enough reason for a war? Well, you see, it depends on whose home was trespassed, and by whom.

After many more underhanded and coordinated attacks, via multiple provincial and federal agencies that followed their break-ins into my home, I was arrested using fabricated allegations of being a terrorist, and was chemically castrated! No, this is not supposed to be funny, ironic, or hyperbolic. By torturing me for two weeks they thought that they had managed to break me, and silence me. Even from within their torture chambers I was able to send out a message.

A message about what and to whom you ask? A message about nothing (mu), to nobody, as a dot.

In mid-2020, exactly a year ago, I was branded "a violent, paranoid psychopath who has contacts with mercenaries", and was heavily induced into expressionless submission with a dangerous [cocktail of psychotropic drugs](#). I was then released to be just fit enough as a dullard who could only drool on the floor.

It took me another three months to rebuild my networks, clear out the drugs from my system by drinking distilled water, and acquire tools to find the main culprits who had thoroughly violated me and my sanctity. I downloaded network surveillance tools, and the [OONI](#) app from [F-Droid](#). I filled my phone, tablet and computer with religious texts of every major religion. Downloaded lots of LGBTQ+ materials and porn. Emptied out all of [my bank accounts](#). Got rid of all social media contacts. Started posting hair raising memes and emails directly to people who don't like to have their feather's ruffled. Dangled the whereabouts of a copy of the additional evidence I have, through various private and privileged conversations using my phone and laptop. And then noted all of the network interference, and incursions against my home's router and computer network over the next six months.

The point of filling my computers with those materials and using Google Docs or Github (i.e. Microsoft) to write these kinds of lengthy articles, in UDP broadcast mode, was to attract the same type of attacks, which had previously fried my computers. Google, like Microsoft, Apple and Facebook, has always only sought an automated opportunity to sell your data to the highest bidder. They claim that it is their right to do so. This highest bidder, usually in the guise of a marketing intelligence company, is a shady government or private agency hiding its activities from all other wings of the government in the name of "protecting national security."

For example: a conglomerate like [Apollo Global Management Inc.](#) acquires [Triple Canopy](#) into its portfolio as its private military outfit, and then internally shares "business intelligence" from all possible "data vertices" within its network of subsidiaries, affiliates, clients, customers and vendors, particularly vendors like Microsoft and Google, with its "threat analytics" group from Triple Canopy. A corporation like Apollo Group is able and willing to do this in a fully automated fashion, for the corporation's terms of service, mandate, and "corporate interests and risk management strategies" allow it to do so, very fluently, without concerns for antitrust litigation arising from US legal frameworks for corporate laws. Their lobbying activities practically designed and dictated those federal laws and statutes in the first place. So they need not ever be worried about "the government's regulatory forces" breaking them up, to improve competition in "a free market." The best way to win a competition is to have no competitors, by simply killing them with militaristic brute force. These are [the new emperors](#) who own private military and courts, that operate as a global conglomerate with absolute impunity, above and beyond all democratically elected government entities of any country, including the EU.

I knew that anything related to religious literature and materials is a highly weighted factor, by most policing agencies of the world who claim to be vanguards of "justice and peace." As always, literature about Islam is

on their list of top things that ought to be eliminated, for its "inciting and radicalizing contents." They also love burning any non-christian religious materials that are "oddly pagan." And within Christian literature their favorite is to bash on Catholics, particularly in the US, Britain, and in Canada. So just go ahead and befriend any enthusiastic atheist, Celtic, Muslim, and Catholic persons in your neighbourhood. Do the usual eccentric things like wear ridiculously high contrast, colorful outfits, along with the usual emo talk about drugs, sexual abuse, death, and suicide. Definitely interact regularly with atleast one Jewish person, and someone who might be classified as an "involuntary celibate" due to disabilities. Social service and public law officials can be particularly prejudiced against Jewish diaspora, the poor, and the feeble. These officers claim a systemic and "God given" right to do sadistic and hurtful things to minorities, immigrants, poor and homeless persons, and to the "afflicted." Supposedly, God wouldn't have given them the upper hand to punish and molest those "beneath themselves", if God's will didn't intend and command it to happen.

Moreover, if the "jew" or "in-cel", that you befriend happens to be a card carrying feminist, who is also an LGBTQ+ ally, then that will just make things even more AWESOME! Sprinkle in lots of anti-capitalism and anti-monarchy rhetoric in crude online posts for a history of producing extra salty vitriol. Write anything with words like explosives, fertilizer, Allahu Akbar, and bomb within a private Word document or a Google Doc. The "authorities" would have already given themselves permission to violate every oath they have ever taken, and "dutifully" pilfer your private accounts, using the pretext of you being "at risk of harming yourself or others." And finally, add to this any content about African, Tribal, First Nations, and Indeginous cultures, along with "sympathising communications or activities" with members of such ethnicities. Oh, also, add meetings with local Iranians as and when possible, to taste. With even one of these things included in your "profile", you would become guaranteed to be "monitored closely", and taken into custody at least once, "for your own safety and wellbeing." However, with my above recipe for a [gumbo](#), you will immediately show up on their radar as *the top shrimp*, who happens to be "a growing cause for concern."

Hardened SS agents and their increasingly clever algorithms that scan all conceivable communication channels, will ignore any disingenuous or inauthentic use of this methodology.

So be authentic, [**be the real one!**](#)

By the end of 2020, what I found within the attacks directed at my computers wasn't very unexpected.

There were the usual Christian and Russian groups who think that gays, lesbians, and persons with different gender identity or sexual orientation, other than hetrosexual cisgender, are an "abomination." Their attacks usually involve unoriginal malware and techniques already available on the net and darknet. They can spam your email, dox you, conduct [watering hole attacks](#), and in general, post trite pamphlets on Christology to your mailing address.

Next were the opportunistic thieves looking for financial data. These people managed to steal details of my identity cards including my passport, some Munero I had, and were spying on my communications to look for financial trading insights. Their attacks were more sophisticated. They managed to get access to my computer to take real-time screen screenshots, by exploiting windows remote desktop protocols.

A more unsettling attack was in stealing my medical history data. When I went looking for which database on the darknet might have included my healthcare info, I found that the entire LifeLabs healthcare network for Ontario had been compromised prior to November 2018. So it's possible that my health records being stolen from my computer wasn't a targeted attack and was instead, a part of an ongoing persistent attack on registered users of LifeLabs. But, everything else they did, was very targeted.

After that were the local police in Kitchener, along with their cabal of social service directors, and the city's commercial leaders. This group also had individuals posted on the rooftop of the building opposite my house. Their field agents would take photographs, through my balcony's french window, of me sitting on my computer in my living room, most probably to prove in a court that it was indeed me on the keyboard who was posting things online of this nature - <https://github.com/serene-solidarity/m-a-c>

The worst offenders from this group were a few officers from Waterloo Regional Police Service who would constantly molest and harass the homeless youth, each night, in the shelter next to my apartment building. They were among the agents who had aided the group which had entered my house. So I simply noted their transponder and vehicle numbers, and posted it online on Pastebin for nobody.

A surveillance group from my embassy managed to take a peek at my activities at times. I still don't know if they were helping me in any way or not. Have I been helping them? Of course I have been, with [my simple and plain existence](#).

Few Chinese groups were hunting Tibetan Buddhists taking refuge in Canada, using a worm floating through QQ Chat, and a bunch of Turkish groups were hunting Kurdish refugees as well as Fatih-Gulen supporters via Twitter. All of them were just weird. Their attacks were the strongest and stealthiest. But their attacks were also least disruptive to my computer network because they realized soon enough that I wasn't supposed to be their target. While looking into their SMS based phishing attacks I came to find out that the entire North American emergency alert system via phone calls, and most PBX exchange routers were compromised by some group. This group was using the telephone networks to make robocalls and hunt for victims via phishing attacks. The Canadian authorities never managed to send out proper instructions for Covid-19 during the early months of 2020, using the telephonic emergency alert system because it wasn't safe and secure enough to do so.

US ICE and FBI were looking for a person with my name involved in some kind of an incident at Carnegie Mellon University during the mid 2000s. Even though I have never been to CMU nor have any connections with it, these agencies spent the most amount of money, time, and manpower compared to any other

attackers on trying to entrap me. They went on a domestic goose chase in Canada after me for more than a year, and returned to the US with a handful of goose poop.

One nefarious private investigation company that bugged my phone was hired by a local church. This church seems to have thought that my effort to volunteer as an English conversation partner, for new immigrants learning to speak English at their facility, was a bit too odd. I was merely trying to do something productive with my free time. All I can say about them, which will sound very ironic coming from me, is that, "indeed there is no rest for the weary."

There was another private investigation company hired by a local business and legal group doing background checks, due to their previous interactions with me on some unrelated business matter. To them I might have appeared to be the entire cast of an SNL parody on Canadian society.

Few local groups did take undue advantage of my social relationships and behavioural patterns to underhandedly violate my privacy and personal space, but their methods were not as sophisticated as the subversive cyber warfare tactics of the Bundesnachrichtendienst (BND). The German BND managed to remotely hack my phone via its firmware backdoor, compromised my private PGP keys, and stuck their screen overlay on my Signal app to spy on my keystrokes. Based on their invasive style, the BND could have been aided by Europol or Interpol. It's also possible that every agency in Europe trains on the same, hackneyed, tools and techniques. Their involvement seems to have been due to my close friendship with an Iranian family and a German EU citizen, in my neighbourhood. Friends with Pentecostal Germans, Baha'i and Jews? Damn!

Well actually, the Baha'i are very congenial and Germans from Germany aren't antisemitic at all anymore, unlike the current day Germanic neo-nazis from America. Of course, there is no need to add a link to an ironic or tragic image of American neo-nazis here.

Instead we can cut to an [informative link about the massacre of Palestinians by Israeli forces](#) invading Gaza, during these days [June, 2021]. It is as though any community that has been historically oppressed, automatically gains the right to commit the same atrocities it had suffered [historically], against a poorer community, so that it does [not remain the world's underdog](#). The poorer community gets eradicated and its lands get stolen. In such a situation, sending prayers, hopes and wishes against missiles, is simply meaningless. It is evident that Palestinians, like Bosnians, Chechens, Kurds, Samaritans, Yezdi, Uighurs and Rohingyas, will keep getting murdered towards extinction. And perhaps a century from now, we will talk about the incidents presently taking place in those parts of the world, within history books, the way we currently talk about Incas, Mayans, or Carthage. But then again, neither did the Roman or the Byzantine empires survive.

Rome was certainly not built in a day, but it was indeed burnt overnight!

So even if Tel Aviv has an "iron dome" to protect it, the city still stands the risk of its sewer lines being pumped with: [phosgene](#), kerosene, petroleum, pure ethanol, methane and other volatile, toxic or explosive materials. You may understand that stealing a petrol or a diesel tanker, and pouring its contents into sewage lines, to then light it on fire, in order to blow up parts of a city, is plausible. But surely production of gases like phosgene within sewer lines and storm drains must be nearly impossible, right?

So here is a digression within a digression, about [preventing phosgene based attacks on a city](#). Due to intrinsic risks of bad urban designs, every atrocious dictators' cities in the Americas, Europe, Asia, Africa, and Australia that are places like Israel, can be sent to a hellhole, within a hellhole. May this document reach those who need to understand how to fight hazards with simple courage and ingenuity. For whether it is Palestine or Hong Kong, as a world we continue to merely pay lip service as support for communities being exterminated with extreme prejudice and cruelty. Such sadistic and murderous acts are belligerently inflicted by tyrannical people, who can afford advanced weapons of mass devastation, upon communities seeking independence and rightful self-governance of their territories. This kind of malice in the hands of massive military and paramilitary troops of autocratic colonial regimes, will only engulf the world, rendering all life on Earth into nothingness.

Let's return from that interlude into the state of current global affairs, to my personal account of a series of cyberwarfare attacks I had suffered during the last two years. Throughout winter 2020 I continued to observe the various state sponsored and private groups of Britain, Canada, and the US take a stab at my computers. I had portrayed myself as an easy target that they could attack eagerly using ruthless, prejudiced cyber attacks. Eventually, the American National Security Agency (NSA) style of an attack occurred again in which my laptop got disabled completely. And a number of viruses left in my router, continued to reinfect the laptop upon reinstalling an operating system. Through my second computer running Arch Linux on Android, that I used for network monitoring, I noted that these attacks came from a server registered to Battelle Corporation directed at my Windows, Linux, and Apple machines. And I believe such an invasive, cyberwarfare based attack targeting me, could not have occurred unless facilitated by my Internet Service Provider, namely, Bell-Rogers Canada.

After that, someone else managed to hack the Firefox add-on called "[Dark Reader](#)" and gained control of my browser on my Windows based laptop, once I finally got the laptop working behind a second router. The same hacking technique also took over Firefox in my third computer running Ubuntu via "[Dark Mode](#)."

And then there were the UN Anti-terrorism and Google's Zero Day groups, with their maverick levels of psyops in using "[force](#)", through browser cookies. Their tactics involved pushing the following type of content onto me via my entertainment watering hole, that is, YouTube (this is very deep-end cyops to paint persons as a [schizotypal](#) paranoid, be extra cautious): [Umami Interface](#).

Notably, almost all of the content and style of this document would fit right into characterizing me, the author, as having schizotypal or schizoid personality disorder, including the part about me deliberately

working on this stupefying article, with the design intent of it being picked up by my cyberwarfare based adversaries. It would be posited that my "antagonizers" are, and have always been imaginary. It will be said that these groups of people spying or attempting to harm me have merely been a product of a diseased mind. I would say, for the American, British and Canadian state sponsored threat actors mentioned in this document, the status of my mental health is immaterial, as long as the narrative about my mental health and other circumstances can be shaped to their advantage. In most situations, the descriptions of cognitive disabilities and dysfunctions, in North America and in the UK, are heavily weighted towards social behaviours that would be unacceptable to Victorian era norms, concerning submissiveness. Even automated behaviour modification content thrust upon internet users through Google's AI and AdaLab, are built upon Anglo-Saxon and euro-centric notions of "normal" cognition. It is also very common for psychiatric definitions in these countries to use catch-twenty-two statements such as, "a person's disagreement about the labeling of their health as a disordered mental state, with *unconventional beliefs*, is a symptom of their disease." Among westernised countries, as demonstrated by behaviours of state side authorities, any dissent expressed against Victorianism is direly [unconventional](#), and is the greatest affront to "the free and civilized world." They would assert that all forms of unconventional and [incongruous](#) behaviour, from their perspective, need to be stamped out, at all costs!

As such, [my job](#) is to merely have them bear - all costs.

Oh wait, I made a cute meme to explain all this, here it is - "[Large Head-On, Not Hedron, Collider](#)".

And, [here's another one](#), because I had many screenshot images leftover that were too ticklish. What's war, without hardcore meaninglessness?

Original Punter)OP)

The original, original punter, might have been David. You know, the David from that David-and-Goliath story. Every culture has its own version of [a titan-slayer](#). Slinging a crude little thing into an oppressor's eye, to bash them senselessly, is an age old tradition. In contemporary times these crude little things to be flung around senselessly are called memes and tweets. Of course, anyone can tweet a meme like any other twit. Since, standing outside with placards and protesting by marching around is too laborious, it is better to come up with low cost, inside the box, solutions for protests. The much more annoying thing is that spending money in order to protest, simply makes more profit for predatory capitalist oppressors.

So instead of buying art supplies to create non-fungible-tokens that can be used for protesting, it is simpler to directly convert existing cash into non-fungible-tokens, and then go around town purchasing things with them. It is quite the conversation starter! The following were so non-fungible that even banks refused to take them:

1. Gandhian philosophies - mixed media art - ink on paper, photography and digital artwork - titled

["Gandhiji Says"](#)

2. Visual rhetoric on colonial symbolism - mixed media art - ink on paper and photography - titled "[Blind Colonialist vs Not Colonialist](#)"

3. Visual rhetoric about blood money - mixed media art - ink on paper and photography - titled "[Here is what fuels Canada](#)"

Operation Rosenbridge)OR)

My Arch Linux instance on Android used mobile data for internet connection and ran a set of penetration testing tools against my own IP-address and subnet masks. With this strategy I could [observe information packets being processed](#) by my computers as an external agent sitting within the local network. So imagine a situation of this sort - a virus infects the home router, and through it, keeps infecting any device that connects to the router. If a device is cleaned by using an antivirus software, or through a fresh install of its components, the virus comes back as soon as the device connects to the router for internet access.

That was the kind of situation I had to deal with.

Now imagine an even more sophisticated attack - skip the router and only infect the devices connected on a local network, through a compromised device that was *forced* onto the user. Suppose a "free Apple iPad" were given as a reward for winning a raffle or a gift. Malware preinstalled in that iPad would allow it to keep [monitoring user behaviour, or even infect other devices](#) on the local computer network connected to it.

Using multiple tactics of compromising the local computer network, a remote operator can gain control of devices that can have executables installed in them to provide unauthorised access.

In such cases, even if the user attempts to use a virtual private network (VPN) connection, the signal from the device to the router is unencrypted, and gets intercepted by the malware, letting the remote hacker learn the full and authentic path to the device's root file system. Likewise, if the user attempts to use a PGP key for encrypting signals sent over the internet, the private key would already be compromised at the onset of generating the key. All keystrokes and content displayed on the screen would be similarly stolen through a keylogger and a screengrabber, leading to compromised passwords and access control for emails, bank accounts, social security or similar tax related accounts, healthcare data, and other such private archives accessed via computer terminals.

In such a scenario, creating virtual machines within the compromised computer, and assigning virtual network card interfaces could allow the user to see how a particular malware might attempt to use the network connections presented to it. Using this method, I managed to discover the activity of one trojan virus that was hidden inside a pdf document. I had downloaded this pdf from a reputable company's

website, about their job offer description during a routine job search for gigs. [The attackers had found my behaviour patterns](#) and stuck a virus within an unsuspecting company's job offer description, or had created a fake URL with the listed pdf, that I was lured into downloading. I managed to clean that trojan virus but, there was an even more insidious worm in my computer networks.

An executable simply named as a service program in the Windows task descriptions, would try to send a ping to a list of IP-addresses. If it wasn't able to reach the servers it would remain dormant. If it reached one of the servers it would upload a massive zip file. After more investigation I noticed that my entire WhatsApp contents and contact list had been included in one such zip file that was sitting around in the temp directory of my phone. The attackers had obtained pictures, phone numbers and physical addresses of my family and friends. It was apparent that the attackers had very deliberately gone after photographs of my nieces, and had excluded other photos in my WhatsApp directory from that zip file.

The worm seemed to have a way to generate a new IP-V6 address and did not use any of the previous ones in each attempt for contacting a server. This made me wonder, who would have access to so many IP addresses and have a preprogrammed generator in their virus. Removing this worm was out of my league, and I couldn't figure out how it kept coming back into the Windows based computer, even after multiple hard resets.

So I decided that it was time to get in touch with actual Russians, also known as Kaspersky Labs. I downloaded the latest Kaspersky antivirus premium edition onto the compromised computer and let it do its thing. After hours of scanning, the software indicated that my Windows machine had a fault with its kernel and needed a reboot. I rebooted the computer and it simply died. Somehow the computer wouldn't go past the BIOS boot sequence.

I then used a linux usb boot disk and formatted the machine. Doing all these things made me lose months of paid work and harmed me in many social as well as emotional ways. But that is of course the intent of such attacks. And the attackers appeared to possess infinite resources for being able to persistently, and repeatedly, keep conducting such malicious cyberwarfare attacks.

Earlier, when I was in a detention centre getting tortured with drugs that were designed to cause blood clots and intense pin prick pain in my legs, I had managed to send out a message to nobody:

*sun-dried deep-dish clay-baked case-hardened authentic hope CC0
a mind that is outpsyed of anXone's grasp! | ;P*

I wasn't allowed access to a cell phone in the detention centre. So I requested one of the other inmates who was there on more lenient terms, to take a picture of a graffiti I made with crayons, and send that image to my instagram account. The message was hidden inside the image and requires some image processing to identify it. The obtained text then needs to be [decoded](#), which needs the hash key and a switch to pipe it through a [particular cypher](#). These were later provided in the description and comment of the image on a public message board.

At the end of my investigations I was "confident and not at all uncertain" that the attacks were from state sponsored groups within the US Department of Defense (DoD, not [DnD](#)). All the other groups that had attacked my computers did not have the sophistication of this worm that could figure out when it was trapped within a virtual machine's honey pot and act differently. The only thing left to do was to download tools with nobody's help, that would allow a separate piece of code to latch onto the worm. This piece of code was to piggy-back on the worm's communication with its master when a "wormhole" was opened by it in the virtual machine. This separate piece of security code would then allow nobody to find the original location of the attackers operating the worm. When this was prepared, I let the worm do its thing, and a wormhole got opened by it to [FireEye](#).

So, if FireEye managed to lose its cache of zero-day exploits and other malicious tools in its "[dynamic threat intelligence cloud](#)", leading to a similarly nefarious cyberwarfare cache owned by the FBI to evaporate, it's possibly because of a large number of "unknown unknowns" that may have included the rightful, self-defense based, freedom struggles of nobody and [no 1](#).

All of such things might anyways be inadmissible in a court of law, because it would be more psychologically pleasing to officials, to call all of this a literary work of delirious fiction, than to take any of it seriously and admit to the rampant malfeasance of Euro-American "peace and justice" enforcement agencies.

Add more cowbell

You cannot possibly imagine how livid I was when I first discovered that North American state sponsored attackers were targeting my nieces. Only terrorist groups and some people in a few Israeli intelligence units, Palantir, Cerner, [BlackRock](#), and few subunits of US Homeland Security, are criminal enough to target innocent children and family members, of a person they regard as "fair game." Not even the worst Chinese and Russian goons attack children distantly related to you, if they consider you an enemy. It was obvious to me that some individuals in the US DoD did not want the evidence I had about their genocidal activities in Afghanistan and Iraq to become public, at any cost. And that I was being targeted as an enemy of the state. After finding out which particular degenerates had attacked me in vicious, sly and dishonorable ways, the next job was to go burn down their banks. An eye-for-an-eye would leave the world blind, that is why when somebody injures your eye, you are to go ahead and torch their money laundering machines, as well as the wallet in their suspender pants.

So the next set of fictional communications between no one and nobody could have been in this manner:

No one: A money laundering pork city can be burnt down to ashes using claymore, semtex, or C4, attached to gas pumps in key locations. Thermite can be employed to take out their high tension electric power line structures, especially electrical substations coated with a mist of petrol, kerosene or propane. And with [gasolina sprinkled from fire sprinklers](#) in every possible building of the city.

Nobody: You mean [like this](#) ?

No one: Yes, precisely. Definitely add more [claymore](#). And guess what, I gotta fever, and the only prescription, is more cowbell. Babies, before we are done here, ya'll be wearin *gold plated diamonds*.

Nobody: [Ryōkai!](#)

Here I'd like to add this cute little digression to a story about [three little pigs](#). You might know this story about how a wolf huffs and puffs, to blow down the houses of two lil' pigs, one made of straw and the other of twigs. The third pig was "wise", and built a house out of bricks. So the wolf wasn't able to do anything to that house, and was defeated like [the spics](#). I would say that this story was a marketing ploy by "[big asphalt and big concrete](#)", to popularise the use of tar, cement, and bricks. But anyways, let's extend that story - once the wolf gets defeated, *an amateur human* walks by. This person sees the pig's brick house and

exclaims, "Ah yes! This entire house will make a fine oven. It's time to [roast, a pig!](#)"

So in any case, (Don't fear) [the reaper](#), and especially, not [the solitary reaper](#).

سيف الموت

Sayf al-mawt is exactly [what it sounds like](#)
And the "correct" pronunciation of Target is most probably
"Tar-zhay" [taʁʒɛt] with a French-Canadian or a Canadian-French accent
So prais [ABBA](#) and not [Woodrow Willson](#)

Figure Zero

[This diagram](#), illustrating the flow of knowledge and influence among various groups of people, in the context of military intelligence, may come as a surprise to some people. Are all military groups only fighting to maintain some kind of a story? Yes. And the story is monumentally important because it forms the basis of each group's religiosity, nationalism and patriotism.

The group of countries called the Western Allies, that garnished spoils of war throughout the planet after World War II, have continued their crusade to wipe out native cultures of the entire American, Australian and African continents, Eastern Europe, Middle-East Asia, as well as South and East Asia. If they were to fail at completely eradicating or thoroughly suppressing, all communities of the world that do not abide by their version of the Christian Bible, their basis for superiority, elitism, and economic power will remain at jeopardy. They will not be able to sell the image of a white saviour with blond hair and blue eyes, if they were to acknowledge that [Jesus could have been](#) a wheatish Iraqi, or a black Ethiopian Jewish person, whose ordinary poor single mother was downtrodden and cast to the outskirts of the city of Nazareth as a gentile. If that happens, the flawed ideas of white supremacy would be more easily apparent to people of all cultures throughout the globe.

The white guys on the US dollar bills, or the [white crow](#) on the British pound, won't seem that special if Anglo-Saxons aren't seen as "the descendants of god with supreme race and culture." Why would anyone in the world then bother to join western protectorate as a client state, if the Western Alliances aren't supreme?

Try to see if you can find something interesting in the following lines of reasoning:

01) Finding Unfounded Foundations

Figure Zero is a digital artifact, within this entire mixed-media art, and is a non-fungible-token. All digital artifacts are made in binaries. If we go ahead and mistranslate the concept of binaries as

"pairs", we could say that all digital artifacts are made in pairs, such as male and female. The inconsistency and illogic produced by that mistranslation, would be discovered quickly by most people. Except, for those who watch shows on the History Channel after midnight.

The binaries of digital artifacts are indeed just signals in the form of zeros and ones, or high and low voltages, or on and off states of gates, etc. These binaries can be compressed losslessly, under certain boundary conditions, to be stored and later decompressed, for desired uses. Such a rare, inimitable artifact in its original form, could be considered a valuable non-fungible-token.

Similarly, the valuable binaries of biological entities are called [DNA](#). The concept of DNA binaries as pairs alludes to the mating pairs of codons on each strand. However, DNA strands aren't literal "male and female" clumps of amino acid molecules.

It is entirely feasible to manually and [mechanically, extract the DNA](#) of thousands of [flora](#) and [fauna](#) over the years, to then store each specimen in a vault. Does the vault need to be the size of a ship for instance? Yes. A ship sized warehouse, preferably an underground one, would be ideal for storing biological agents and components. These days, doing such things are most probably worthwhile for posterity, and for the obvious reason that such bio-warehoused assets will be lucrative in the future as non-fungible-tokens. But, only the History Channel would bother to come up with a clickbait video about ancient humans (aliens), extracting DNA or chromosomal pairs of various species, to then store all of it in a "pyramid", or a (space)ship.

You might have noticed that the quality and style of this document is almost as bad as that of programs on the History Channel at 3 am. Of course, that is why you have gone ahead and [binged on this, haven't you?](#)

Instead of ideas from the History Channel that act like narcotics, the more interesting and legitimate idea is of storing DNA in digital format. The [sciences and tools of bioinformatics](#) that came from cybernetics, makes the current endeavors for creating a series of Covid vaccines possible. However, all such endeavors are definitely error prone, and not without their untoward consequences.

How many errors can accumulate during transcription and translation of a scriptural document, or a strand of DNA? That is a valuable PhD question, and the [existing mathematical proofs](#) indicate that mutations are guaranteed, but some errors can be corrected via redundancies in the remaining composition.

In the context of scriptures, only Arab scholars from Iraq or Syria could have translated [Aramaic and Akkadian gospel texts](#), into Arabic around 100 AD, and then to Greek around the year 250 to 350 AD. Following that, only Arab merchants could have transmitted such scriptures to neighboring Indian, Mongol, Greek, and North African civilizations.

Greeks did not indulge in any other languages back then, not even Latin, because they thought of other languages as unworthy, in the presence of their version of Greek language that was gifted from the Greek pantheon. The idea of a language or script being derived from the god or gods of a culture is not a unique one. Have you heard of [*Brahmi Devanagari*](#), or [*Gökturk*](#) scripts? Every culture would like to aggrandise itself as descendants of "god." Naturally, one descendant has to kill the other one in a "glorious war of the worlds" because that is what gods and demigods do.

You may understand how prevalent cultural misappropriations are aided, by killing the cultural roots of all other original civilizations, that could have had a more authentic translation of the Bible than the current versions of [*Euro-American Christianity*](#). By having no other source for authentic translations from Aramaic, current structure and interpretations of Christianity become "unassailable." And that has been the all important and fundamental reason for ruthlessly wiping out all nations, that could possibly shine a light onto the current versions of Bibles.

Pick up any Bible and soon enough you will notice prejudiced sentences and sections injected into them, by "Christian apologists and researchers" from recent decades. These Bibles have many more ridiculous wanton sections dumped into them by [*successive King Jameses, King Henries, Queen Maries, and Queen Elisabeths*](#) from the past few centuries.

A similar challenge exists with the Quran, and Vedas. The "original" texts of the Quran, Hadith, Upanishads, and Vedas were destroyed during successive wars throughout medieval Asia. The ones that have survived or "recovered from other sources", are due to one of the rulers' decree to canonize particular texts floating around during their reign, while strictly destroying rest that they did not fancy. Most of these efforts to create a collection of "official" religious texts were carried out during the fifth to eighth century [*CE*](#), to suit the society of that era. But mostly to suit the *patriarchal rulers* of that era!

Unfortunately, with almost every scholar of ancient Aramaic from Asiatic and African contents murdered or dead, any politically motivated "translation" propped up by the dioceses of Russia versus Europe versus America, in the case of Christianity, or by clerics from UAE versus Saudi Arabia versus Iran, in [*the case of Islam*](#), would become that organized religions' ultimate norm! Well maybe not, because like any other clique, clerics and clergies will keep fighting among themselves via backbiting and one-upmanship, to tear each other down.

Political upheavals and succession wars almost guarantee that every six or seven generations later, a whole new "sacred book of ultimate truth" will be proposed by a newly strengthened sect of a particular religion or ruling political party. This has been happening in Hinduism for more than three thousand years. At this point in human history, available Hindu edicts are so numerous and fragmented that the likelihood of finding a lay person on the street among Hindu communities, who has ever read a complete canon of Hindu scriptures, is close to nil.

Have you noticed that almost every form of food, clothing, housing, medicine, multimedia, conveyance, education, and jobs that are dumped onto lower and middle class sections of society, are typically of substandard quality? Such essentials of shoddy quality are forced upon the haplessly poor by the ultra rich, to maintain their ultra "benevolent" superiority. And the G7 royals manage to consistently do so, very smoothly, while promoting classism with racial and sectarian inequality throughout the world. So how can the religion tossed down unto the lower sections of society by the top one percent using "trickle down economics", be of any legitimate, scrupulous, or decent quality?

As such, it would be entirely worthwhile for every individual to personally discover, and study the highest quality religious scriptures available within the furthest reaches of the world, even when faced with the worst of all possible barriers to basic education. With respect to whichever religious philosophy a person's household may have facilitated as a first step towards self-sufficiency, including atheism, the most important chore in everyday life for any individual is to become strong enough, to seek out the moral principles and sober philosophical guidance for sustainable health, contained within ecological sciences, arts, and religions. Would you say that achieving self-determination by continuously learning through wholesome experiences, and quality education, is an appropriate means to enrich an individual's community as well as personal life?

Unfortunately, this physical memory dump in a blog article, isn't going to be one of those wholesome experiences, for various people rummaging through it. This composition's design and content simply mirrors our current global ecology's wake-up alarm, which was repeatedly put on snooze by world leaders for centuries. Quite naturally, after waking up to [the ecological realities surrounding us](#), being able to distinguish reliable and comprehensive guidelines, of any scientific or religious anthology, requires the ultimate sacrifice and price, of sincere attention, paid towards basic comprehension and credence.

As a standard retort to all these personal viewpoints and prickly opinions, any contemporary follower of Christianity would say that the Bible they happen to hold in their hand, is inimitable and error free, as guaranteed by God. Any changes in translations would be protected by, and allowed under, God's approbation. Likewise, a hardliner Jewish, Muslim, or a Hindu person would respectively make a similar claim for the book they like to thump around.

In consideration of humanity's chances for survival, please give every vaccine and opportunities for a proper education, to far-right "believers" first, prior to all other poor and forsaken groups of people. Please, for the sake of anything that is meaningful and worth protecting, our entire human species will remain at risk of complete devastation, if they never come to understand the concept of "change!"

Explaining the concepts of entropy, mutation, and error propagation to somebody with "blind faith" becomes impossible, without first wakefully acknowledging the foundational forces of change that abound our physical universe.

02) Do Any Lives Matter?

So, instead of relying on wishful thinking, half-baked mythologies, lore, and legends, one can look to archaeological evidence to identify the origins of various "God given tomes of standard laws."

Tracing information flow in the context of interpreted Abrahamic texts, that are at the heart of conflicts in the Mediterranean region, provides a thrust towards the view that translations from the Greek [Septuagint](#) to [Latin versions of bibles](#), started only from the fourth century onward. During and after those early centuries, umpteen versions of Abrahamic scriptures came into existence. And as pointed out earlier, many of them even sputtered out of existence because of one or the other warlord's designs to "sanitise and unify the scriptures." The extant codices continue to evolve each year with countless mutations among them, via translations into an ever increasing range of languages.

Sadly, none of the Abrahamic texts that have survived, ever manage to explain or even mention the origins of South American, East Asian, Japanese, and Pacific Islander peoples. In that era, "[the flat earth](#)" didn't really include such peoples. It would appear that the same worldview is still held by flat earthers of this era.

[Eurocentric racism](#) has continued to co-opt traditions from all known regions of the world, to undercut the originality of non-european civilizations for centuries. Within these daft eurocentric interpretations of pre-biblical and biblical era texts, everyone in the world, has either been:

- [Semitic - from Shem \(Sem\)](#), or
- [Hamitic - from Ham \(Cham\)](#), or
- [Japhetic - from Japhet \(Iyafet\)](#).

According to racist mythologies, somehow, each and every person on Earth is "ancestrally" from one of the three tribes led by Noah's sons. Here is one of the basic factors in propagating anti-semitism throughout the world:

Noah and his children were quite conceivably Aramaic, or simply fictitious. If they are thought of as historical progenitors, of various civilizations from the pre-bronze age world, then of the three tribes, the "Indo-European" ones have been projected as the superior "Caucasian" and "Aryan" groups led by Cham, and Iyafet, who were supposedly meant to rule the world, with the rest of black and "miscellaneous" people in the world labeled Semites, for they were led by Sem.

Semites have been cast as the forever-slaves for being the "descendants of the cursed 'dark' one". This is explained a bit more later.

To epitomize the idea that darker skinned people are evil or genetically inferior, yet another racist [story about Cain](#) is injected into the "canonical foundations of white supremacy."

In varied interpretations of The Book of Genesis, within different [versions of severed, and several Bibles](#), the racist story of inferior, wretched dark people deserving to be slaves, goes somewhat like this:

Upon killing Abel, Cain tarnished all of humanity due to his jealousy and hatred driven act of murder. After that incident, Adam and Eve had nothing better to do, so they had a third son named Seth, who supposedly turned out to be less of an asshole.

Later on from Cain were born various people, even though the only female hanging around him at that time, should have been his mother - Eve. So, most probably, Eve got raped by Cain over and over again, till a bunch of children were born to Cain. They supposedly had dark or "black" colored skin because they carried "[the mark of Cain](#)."

And during that time what was Seth up to? Most probably, because he wasn't such a bad guy like Cain, he wooed and serenaded his mom to have a bunch of children with her. There onwards all these characters had enough children to populate the planet. What else were women expected to do, according to [pre-bronze age era](#) norms of society, other than to be a child production factory via incest?

Women were usually also thought as unworthy of being mentioned, so much so, that the linguistic structure of such cultures only equates the word "man" with being the representative category for all humans. In any case, most of the earliest Greek, Egyptian, and Abrahamic mythologies are primarily about incest where women's function was to keep getting raped. Early humans were just dim witted rodents, according to most of those stories.

So then, since the mid-18th century CE, [quite a few West-European sociology historians and anthropologists](#) became fascinated by stories of "a great flood", which they found mentioned in a bunch of oral traditions and archaeologically excavated documents, from different civilizations. Many of such historians and anthropologists have remained hung up on Euro-American views of a flat medieval world, and are super enthusiastic about syncretism. So, the stories taught in schools and colleges as "world history", typically drone on about a great flood that wiped out most of humanity, and yet again, only a few "worthy white people" remained on planet Earth.

Thanks to Noah's prophetic visions, his three sons along with his respective daughters-in-law were the final set of people saved by him, on a fairly large sized boat. Onboard this boat were also, "all conceivable animals in pairs." Luckily this time around, there wasn't anybody who *had to* copulate, with their mothers, sisters or daughters, except for, uh, most probably all of the animals and the successors of Sem, Cham, and Iafet - on

the freaking boat! This definitely gives a whole new meaning to the expression, "fresh off the boat."

The story of Noah's Ark then progresses to how Sem was a douche-bag to his drunk and wasted dad at some point inside a, you guessed it, [a tabarnak!](#) So he got cursed by Noah - the almighty curse giver - to have his successors be "the servant of servants."

From all these stories, we have to now assume that Cain's genetic material with *his curse* was more strongly imbued in those who were dark skinned. In addition to this, Sem along with *his separate curse* happened to be dark skinned, and that all these cursed mother-fucking people, were "the progenitors" of modern humanity!

Therefore, all coloured people can be fucked with. Plain and simple. The basis of white supremacist racism and antisemitic hatred isn't all that complicated, is it?

So hopefully you have come to better understand why antisemitic white supremacists feel deeply insulted and indignant, due to the insolent and ingrate attitude, of the entire lot of "[arrogant slaves](#)", who simply do not appreciate their proper station in this "God" given world, that has been perfectly designed for the harmony of all creation, with a blue-eyed blond-haired master, at its pyramidal apex and center!

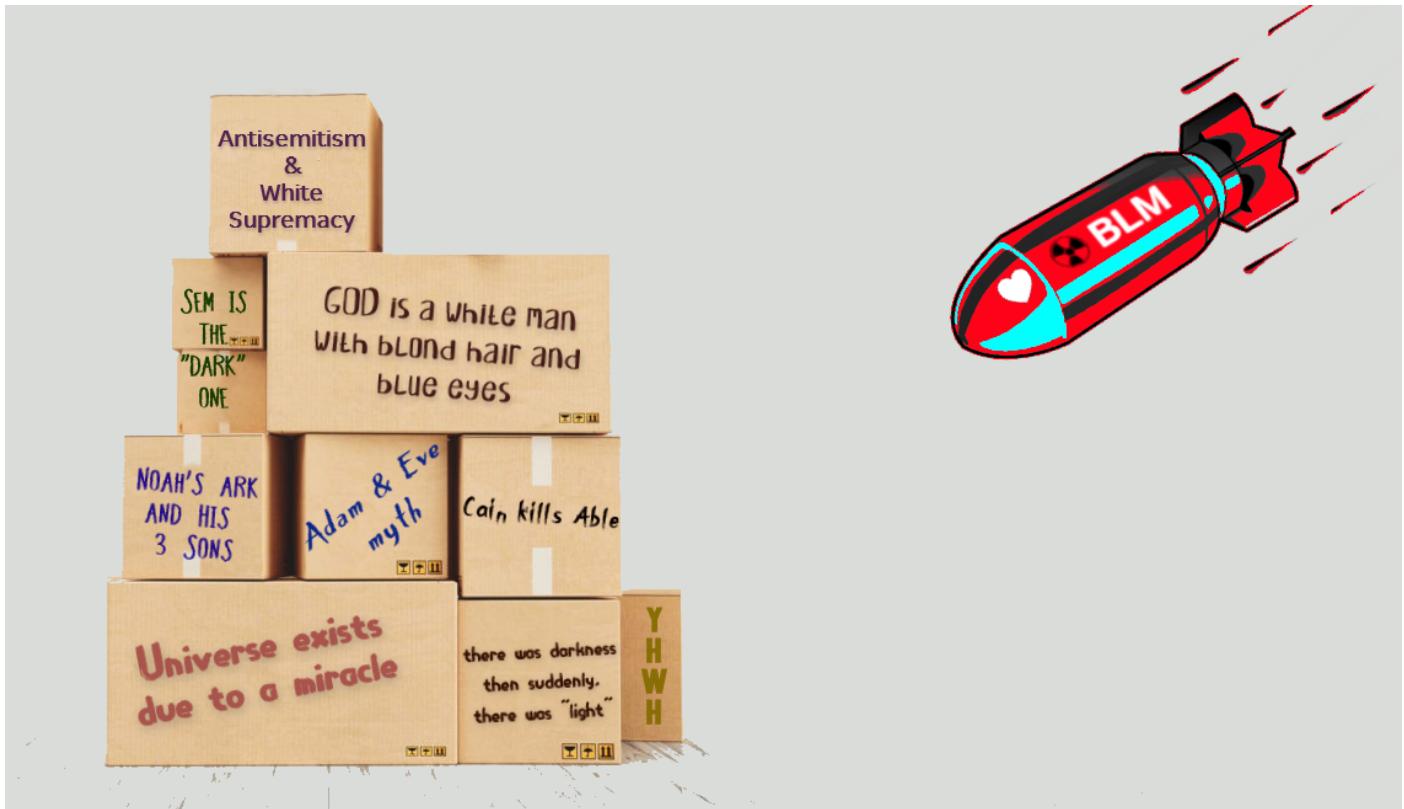

The easiest way to correct these stories would be to rewrite the Bible yet again, through [one more female-free male-only Council, Synode, or a Schism](#). During this rewriting of the Bible, just go ahead and define Adam, Eve, Cain, Abel, and all other such prototypical characters as "nations." All of the biblical stories would still work out, and without incest. But it would appear that people really love stories about sodomy. The Bible just wouldn't be "historically accurate" without stories of sodomy, so those should definitely remain unaltered in the "New Bible." Definitely!

As per tradition, such a Council to decide on more facetious, I mean, truthful interpretations of Biblical scriptures, would require one or the other group of Council participants to get screwed over and left out, using subtle tricks of cyops, and character assassinations. Yes, cyops was alive and fresh, even in pre-medieval times! All one had to do was to wack a courier, or a carrier pigeon, to scuttle "an all important gathering." Or to simply blame someone for heresy, and everyone would get distracted by an inquisition for the abominable heretic.

[Assassin's Creed](#), which is "a very trustworthy source of history", teaches us all about such tricks! It would appear that the artistic liberties used in creating the Assassin's Creed universe, is far more believable, than religious interpretations of various mythologies.

Modern day threat actors like their ancestral ones, seem to have kept up the age-old tradition of a man-in-the-middle attack, to ever so slightly delay or interrupt various communications of "company board meetings." This retracing of stories about the original [crackers](#) can help the whole of

human-kind, boldly and all too eagerly, step into an ever more non-sequitur future. Here, the word crackers does not imply the derogatory slang for white people. 4 real!

IN COMING!!!

Don't you find it ironic that antisemitism relies on stolen mythologies from Judaic traditions about "YHWH?" Or maybe it is just tragic and not so ironic, that human beings evolved in myriad ways to normalize bigoted hatred of each other.

Beyond the obvious misconceptions about coloured and Jewish peoples within usurped and christianized stories of Gilgamesh, there are many other misappropriated legends from Greek, Egyptian, and Norse mythologies that pervade our present day reality.

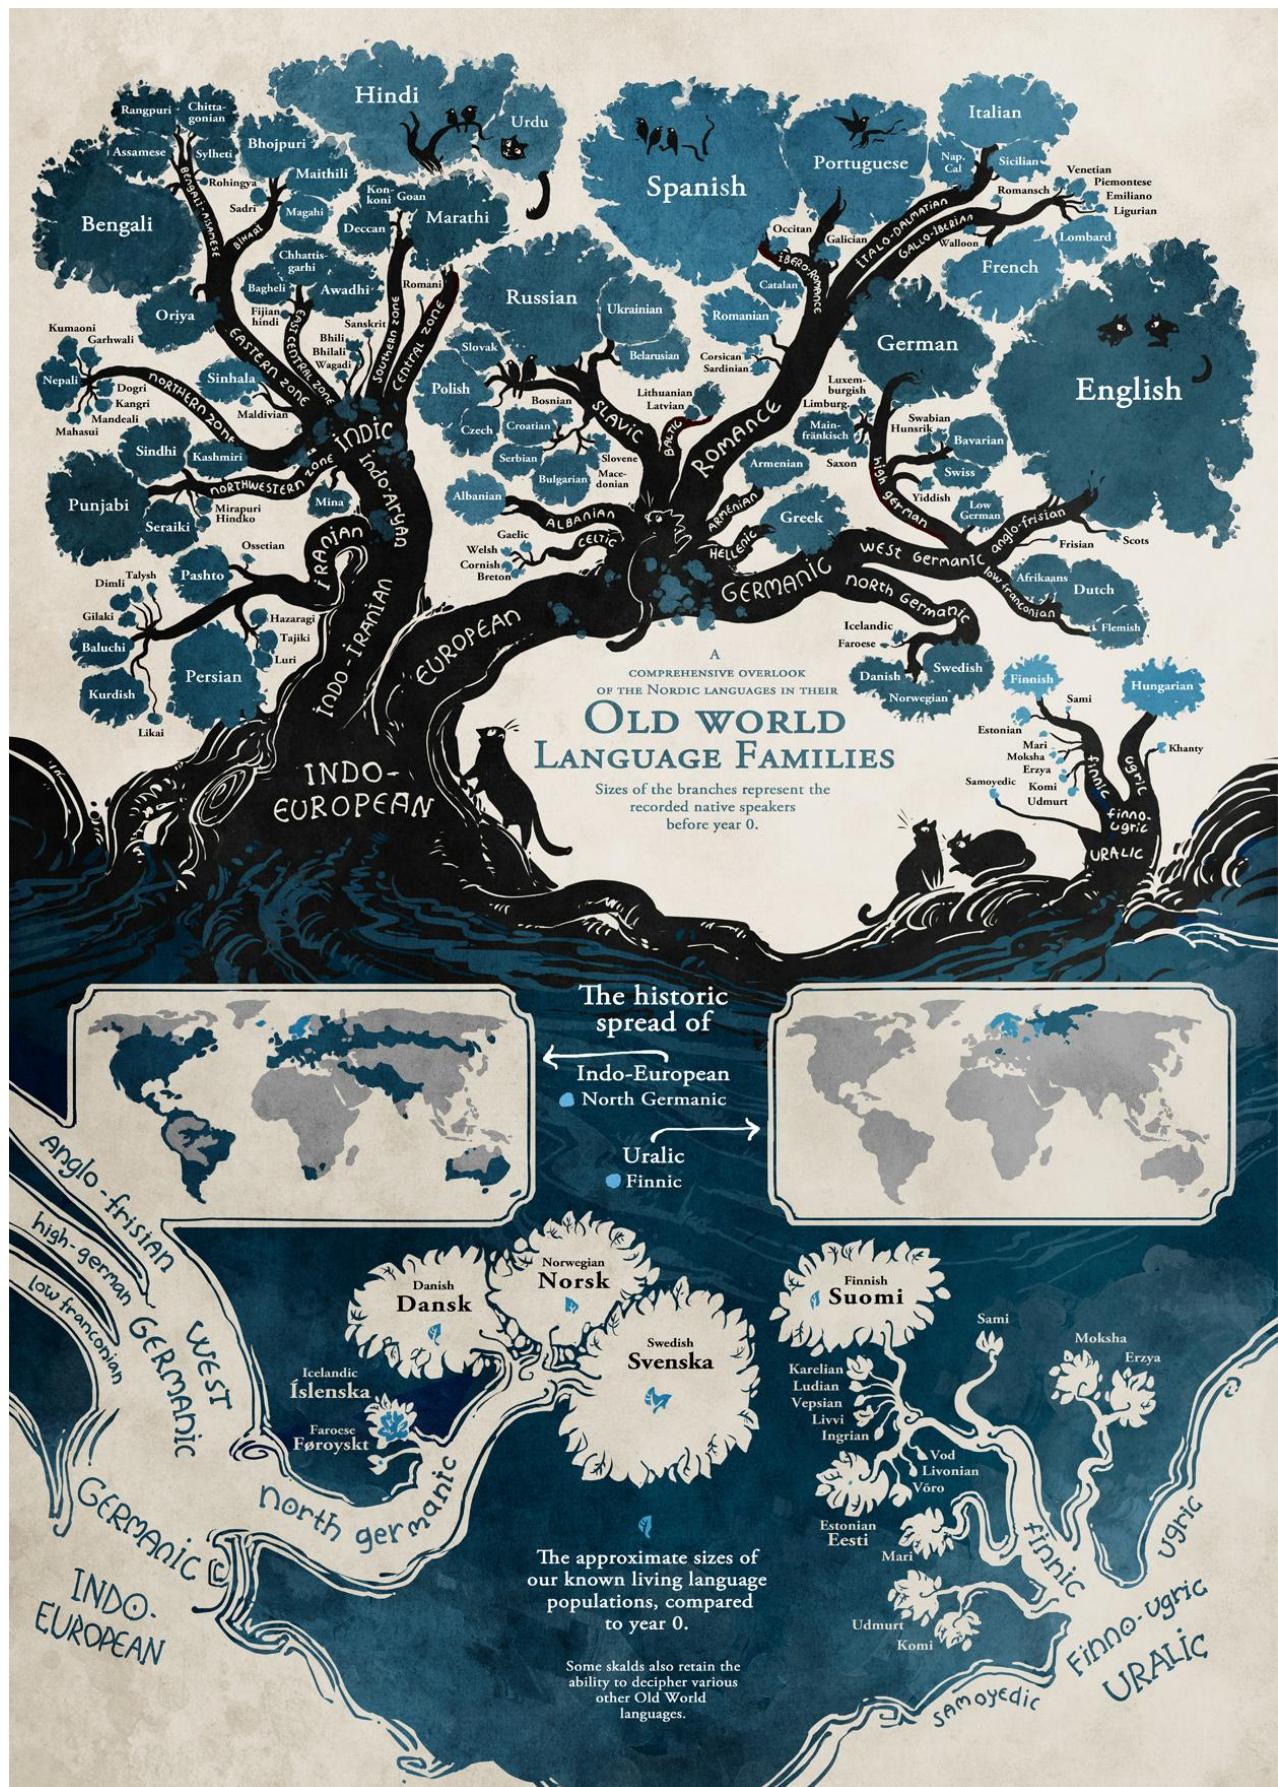

In all of these cunningly mangled ancient stories, the basic point that eludes every European and American design of racism is that no Persian would ever want to call *themselves* Indo-European, because *they* are neither Indian, nor European. And diverse groups of people from the regions surrounding the Caspian and Aral sea wouldn't bother to call *themselves* Indo-European either. Just the same way diverse groups of people from South and East Asia wouldn't call *ourselves*, oriental.

These ideas have remained the most deeply ingrained social doctrines to the essential principles of Euro-American racism.

The prospects of human lives within our global society are structured in such a way that no other life can possibly matter unless **Black Lives Matter**. This is because black communities and African diaspora have been forced to the very bottom of our societal pyramid. However, it turns out that in most countries of the world, black lives don't matter at all, and are reduced to worthlessness. So if the very foundation of humanity's future that we take for granted and trample on, is treated as discarded waste that does not matter, how can anything that stands upon it ever come to matter?

So it shouldn't be surprising to anyone that most of the world, with so many billions of lives wandering about in it, has been reduced to garbage with no hopes of equity or equanimity, for the majority of the world's population.

In keeping up with the maxim of "art reflects life, while life reflects art", this work in progress is as much [a flaming heap of radioactive trash](#), as the polluted physical environs and racist social world around us. How can art, life or work, derived from the current world, not inherit its core elements?

Perhaps indigenous languages are just fleeting clouds compared to other nations' language trees.

src: [The interwebs.](#)

Modern classrooms of various undergraduate linguistics courses in Western Europe and America, start with the concept of language families, and speech communities. Discussions about diversity within such surroundings almost always focus on "Indo-European" culture and languages, while conveniently excluding all other diaspora. Concepts like Indo-European came to be popularised and propagated by very few 17th and 18th century "elite West-European scholars", and particularly by [one "puisne judge", of the British ruled Indian Raj in Calcutta](#). Such concepts were blatantly inducted into global education systems to override and sideline native cultures of North and South America, Africa, East Asia, Pacific Islands, and Australia, that didn't fit into the Noah's Ark fiction.

No wonder, European settlers went around calling every brown or brownish person an Indian. They simply wanted to "prune the world" of unnecessary ethnicities while using an easy oceanic route to pillage and exploit India. In doing this, for centuries, they coined terms like Indo-European to convince themselves to have pioneered such "trade" routes, no matter what they experienced as contrary to their religious worldview.

If it weren't for the scores of millions of indigenous peoples in the Americas, and the Pacific, who got murdered by European colonialists, Indians in India would have been long forgotten and wiped out like the ... Oh wait, all those massacred nations have been long forgotten by now. Who can possibly care about them anyways? There are more interesting things like video games, cat videos, "electric" cars, and other "modern amenities" that help us propel into an ever more polluted future, under the purview and approbation of "God", or science, or [god of science](#).

03) At The Core of Our World

Apart from the ones found in religious mythologies and video games, there are many other sciency stories, no, not *scientific* stories, [sciency stories of human migration and origin](#).

However, even those ones never properly fit any of the archaeological findings about [ancient humanoids](#). Just the same way a description of Covid strains is available with mere speculations about their origins, one that provides [human classification](#) with speculated origins of humanity, is also available through genomics.

There are indeed many stories about how any of us arrived here on Earth. These origin stories and myths are necessary for being able to make claims about who gets to have "original and ancestral rights to settle" at a particular place. These claims are followed by invading settlers' habit of flaunting their ill gotten stead as their "home and native land" since time immemorial. Such claims then give further rights to invaders to murderously defend these stolen lands, "with true patriot love." Tons of religiosity can be shoveled onto this farce, by asserting that, "it was God's holy command, to kill all the barbaric heathens in the forcibly taken lands, so that a 'civilized' nation with yet another prophesied 'temple' could be erected to spread glory on Earth." Yes, as you can understand now,

only bloodshed turns the wheels of human history throughout our planet. But should this status quo be continued?

Depending on the particular story of your origin and hereditary rights that you subscribe to, you will end up in a particular camp of - "believers." And then within that camp, based on your mannerisms, tastes, and preferences for fashion, you will end up in a - clique! Human cliquing behaviour is guaranteed, and is actually the linchpin to hacking any social group, including ones like [the Scotland Yard](#). They are the new mavericks in cyberspace these days because of all their extravagant funding for keeping exploited refugees submissive and subdued, which was in line with their right-winged referendum for [Brexit](#).

Of all the cliques you could have landed in, the most painful one is that of [being disabled](#). Being a geek, or a dork can be bad luck in human society. But being a geeky dorky gay Catholic refugee with a vagina, is seriously challenging. More gnarly than that, in every cultural group, or a camp, is the role of a disabled person in society who is most likely to be scapegoated and become the target of vicious bullying. The person with visible disabilities is often humiliated at every public occasion to be utterly dehumanized, and made non-existent even while being alive and present. A variety of outwardly disabilities that make us seem physically different, or atypical, can immediately set us apart from "normal people." This then gives the so-called normal people an excuse to get on with their normalized abuse of, "abnormal people." A person's invisible disabilities pose an even greater challenge leading to subtle forms of segregation, particularly in the case of children and the elderly. Eventually, both forms of disability are followed by having our entire life and personality, stereotyped by the broad brush stroke, of [being disabled](#).

The zeal to do away with "wonky and unappealing people" is deeply ingrained in utilitarian society. Take for instance the nexus between Lego, Disney and Wall Street. The depiction of a manager or a trader on Wall Street, can only be a living replica of Michelangelo's statue of David in a suit. Wall Street is definitely not [for retards](#). Moreover, it is impossible to find a dignified portrayal of persons with disabilities, in any Lego or Disney production. Of the hundreds of thousands of Lego characters depicted with themes of how society works in reality or fantasy, there are simply none with visible disabilities except, for the stereotypical pirate with an eye patch, a wooden peg for a leg, and a hook for a hand. A similar trend naturally exists in Disney's character designs and stories including the Hunchback of Notre Dame. Through hardcore Disney tropes, the very existence of disabled persons in human society is never appropriately acknowledged, and thereby thoroughly degraded. Any abuse suffered by people who are forced to be invisible and silent, can thereby go on without any recourse to justice or remedy.

Even this document is a retarded parody or a [caricature](#) of itself in many ways, and is therefore rated Arrr, [for pirates](#).

However, can you imagine a person typing all of this only using a straw in their mouth? How able could a tetraplegic person who only has the [mastery of blowing or sipping on a straw](#) come to be? Life would really suck if all you could do is suck on a straw to communicate, wouldn't it?

However, imagine how much, life seriously blows, for poor FBI agents running about trying to sift through 4Chan to find, "[who-done-it?](#)", concerning their stolen treasure chest of malicious cyberwarfare tactics and cyber attack vectors. What will the feds achieve if in the end they arrest a handicapped person for such a "cyber crime?" Will they take away this person's privileges of going outside by locking up the person in a prison, and then levy solitary confinement? That is already a non-issue for many people with disabilities, who were forced into confinement and solitude, by a callous society! Staying consigned to a wheelchair and all alone has been the standard lifestyle for many persons with disabilities, from a time much earlier to Covid-19 restrictions. This is why such a person is ***eternally triumphant***, after getting accustomed to a life of solitude via disability, and is practically immune to all actions that can be taken by the fuzz!

So then, will the feds tie up the handicapped person they scapegoat in a straight jacket, and cunningly administer harmful drugs to make the person die in a pool of their own <puss>, piss and feces? That is already the situation of so many people in nursing homes and elderly care facilities where people suffer like that due to neglect!

Compared to the above possibilities, the worst situation a person with any type of [cognitive disabilities](#) can face, is to be abused and molested by the people responsible for duty of care. Who would even believe a disabled person struggling with speech impediments? If a testimony were obtained from a person with mental challenges the legal system would immediately toss out the witnessed account for being inconsistent, doubtful, and for being produced by a diseased person with "thought disorders." This is why it is easy to dehumanise and dismiss anybody, [especially minors who have already suffered horrendous traumas.](#)

Within all possible cases of litigation involving victims who have faced severe trauma, the first course of action in the flowchart of a defense lawyer, is to straight away dismiss the occurrence of any crimes committed against the plaintiff. If that cannot be done, then, the next step is to go ahead and deride the witness for being mentally or "morally" unfit as a reliable source for a testimony. If by some grand aid of The Divine, that tactic fails, the defense moves onto suggesting that the reported crime wasn't severe enough to take note of, and that no form of remedy can be provided, for crying over "a little spilled milk." When it is established that the crime was of a severe nature, the defense moves down the flowchart to the legal block that labels the events as a freak accident of nature, with their party not being responsible for any of the issues at hand. Finally when it is proven that the crime was severe enough, was definitely not an accident of any sort, and was committed deliberately with the premeditated nature of action, or inaction, of the responsible party, the defense suggests that it was well within the right of the party to subject penalties or punishments on the plaintiff, for the plaintiff is not a victim, but a morally bankrupt, ungodly criminal who deserves to be on the "[receiving end of justified violence!](#)"

In many stories of the world that play out in the above manner on a daily basis, the standard conclusion is that, "the world's undesirable handicaps, tramps and vagabonds are being righteously smote by God, with justified wrath, for a crime they have committed in the current or a previous lifetime that only God knows about, so it is perfectly legitimate to pummel the unwanted freaks of nature, anywhere and everywhere that an opportunity may arise to do so."

The easiest way to get rid of all misfits who have a different religious belief, an alternate worldview, a non-binary gender identity, a non-mainstream sexual orientation, a contrary political stance, or persons who happen to be differently abled in any way, is to erase even the mention of "such debauched people," from all depictions and discussions of what a human being is, or can be.

So now imagine a scenario of self-driving robotic cars that are trained on, "[Asimov's Three Rules](#)," derived from typical racist conceptions of humanity. Consider the outcome of such a robotic car that while steering to avoid a collision with a walking person, notices another human being in a wheelchair, then decides that the wheelchaired person is more-chair-less-human, and dutifully collides into the wheelchair. The foundational flaw in The Rules of Robotics is the inability of a robot to deterministically identify what is, or isn't a human being, at all times.

[A very hacky way to address problems of self-driving cars](#) is to build a database of edge cases, to make those simplistic rules a bit more "holistic." And another idea is to survey the general public (in white-ass Cambridge England), to decide who ought to be justifiably whacked under various driving scenarios that might be eventually encountered in real life. Yes, fat and poor people get voted to be sacrificed by robots right away, obviously.

Likewise, the foundational flaws within security, peace and justice, law enforcement, military and intelligence agencies, is the inability of each echelon of such agencies to correctly identify what is or isn't a credible threat, of which magnitude, and to whom. Fundamental flaws exist in all such sets of rules, [especially in financial and legal sectors of society](#), because prejudiced human beings would like to have their robots, and uniformed personnel, unflinchingly steal social, political and economic freedoms from "lowly characters", or even mass murder an entire swath of "unworthy people", as readily as possible.

We can attest that this has indeed been the case for at least one major group of people - the Afghani and Iraqi civilians, including hundreds of children, who were killed by fully autonomous US drones, over the past two decades.

In the case of US led full fledged warfare over the past two decades, all those who could be excluded from the definition of humanity, had already been decided, and meticulously programmed into lethally armed drones, during the research and development phase of creating them. These drones were then systematically deployed to commit genocide on a horrifyingly large, industrial scale throughout the Middle East.

This program also included designs for getting rid of "undesirable citizens and residents with a criminal history in North America and the United Kingdom", by having such people deployed on repeated tours of Afghanistan and Iraq, with minimal or basic equipment and training. In this manner, such uncouth people would simply die while getting rid of the Islamists. And if they somehow returned alive, they could be cast into the gutters like most veterans. The highlight of the first few decades of the 21st century, for the US and its allies, has been to successfully kill as many birds as possible, at an industrial scale, with autonomous drones.

The story told to the western media groups has remained a deceitful argument about how the entire Middle East, is a terrorist incubator that needs to be completely destroyed, for the sake of preserving "the free, and democratic world." This story has started to mutate to include ways in which Russia, Turkey, and China are genocidal, to delegitimize their strengths in the international diplomatic scene. The military activities of Russia in Chechnya and Azerbaijan, that of Turkey in Armenia, and that of [China against Uyghurs](#) has indeed been genocidal, as proven from excavated mass graves of civilians and obvious concentration camps found in those regions. However, "the moral high ground" cannot be ascribed to any of the western industrial nations for their centuries worth of genocides, against indigenous peoples and ethnicities of Africa, Eurasia, South America, [Pacific Islands](#) and the Middle East, along with modern slavery and ongoing mass murders of "undesirable misfits" in the Americas, English Commonwealth, and the European Union.

The US, Britain, and France continue to feign moral superiority by looking down on other countries from their ivory towers. It wouldn't be surprising if a country like India needed to be further "persuaded" (downright subdued) by them, into remaining a member of "[the Quad](#)", for getting sacrificed in a war against China, by highlighting stories of mass murders and rapes of Kashmiri minors by members of Indian armed forces. Did those incidents and other brutalities actually happen [throughout Kashmir?](#)

Yes, they keep happening, there is never anything surprising about scrappy soldiers, politicians, sheiks, Jeffrey Epstein, Prince Andrew and Donald Trump like tycoons, and priests molesting or raping children. Also nothing surprising about these kinds of people then getting away and being excused for technicalities, for such crimes and high misdemeanors, by their judicial systems.

What else would you expect from a world where:

- [the leaders look so confident](#),
- [the soldiers look so non-malevolent](#),
- and [the undoubtedly upstanding, friendly neighbors look so innocent](#).

Well, what about the priest? Of course, [the priest looks like the embodied sacrament!](#)

That is just how our global society has come to be designed at its core. But should this design be allowed to continue?

04) Living In Colored Toxicity

Figure Zero is an image that belongs to me, and it depicts prototypical organizations. So all prototypical organizations like nations, countries, states, companies, departments, camps, groups, teams, and even cliques, are *in my image*. Yes, in(side) my image.

Consider a culture that thinks of the word "image", to mean substrate, dream, or imagination, instead of a literally derived reflection, or a miniaturized copy. Now consider that this particular culture uses such an interpretation of the word - image - in the context of, "man was created in(side) the image of God."

Certainly such a culture would then be at risk of being exterminated by "[the modern world's standard bearers](#)." Those who need such a sentence to be interpreted more literally, regarding the fiction about God's anthropomorphic form, for the sake of preserving their flaccid superiority complex, obviously cannot accept any other viewpoint that would upset their "serene dispositions", while committing genocides across the globe.

*[You may already know](#), or will come to acknowledge soon enough, that the process of a culture's stories mutating as they spread throughout a cybernetic realm, is very much like that of any virus, mutating, as it spreads throughout our shared earthly existence.

Figure Zero sheds light on the mechanics of how stories evolve under the influence of brutality to create information asymmetries. It illustrates how the basis of statehood is established by having the military ever-ready and mobilized, for killing people who don't subscribe to the version of "history and truth," prescribed to them by the heads of state. Likewise, the police, its investigative branches and all paramilitary and quasi law enforcement groups have the same mandate - to preserve "the origin story." No, their chief mandate isn't to preserve the peace, or justice system. For without the shared religious and nationalistic delusions, there can be no form of control to cajole and placate the masses, to build a facade of peace and justice. And that facade is all that can be had, especially if one is financially poor.

In some countries the political head(s) of state aren't directly the chief(s) of the military. This is why they have to go through a few [charades, and pageantry](#) before they can launch the military onto annoying offenders and contrarians. These types of theatrical countries like to call themselves democracies. And in others, the politician is done away with, so the head of state also happens to be the military chief of staff. These types of countries call themselves monarchies, or dictatorships. There are naturally many countries that are mutated mixtures of democracies, monarchies and dictatorships. Communist or socialist states are merely a version of such mixtures. Communist and socialist societies [honestly](#) don't do anything drastically different from capitalist ones. All countries, regardless of their political situation, are mere addicts of fossil fuels, petrochemicals, and wars of various designs.

There even used to be sovereign states in Europe with a pope-prince-warrior as head of state. Also, every now and then, there comes to exist an imam-sultan-mehdi that some people like to believe in. Emergence or existence of any of these kinds of heads of states has never changed the situation of our Earth. There have always been numerous mavericks, geniuses, gurus, pundits, masters, grand masters, great rulers, most excellent and supreme councils of [joint nations](#), and many more people with extravagant titles, in this world. All of this has never changed the thermodynamics based fact that every fossil fuel dependent human activity, only leads to increasing pollution throughout our planet.

We have yet to figure out how to think, inside the box, about reversing the tide of [global pollution and climate change](#).

Compared to subsidies and attention wasted on excavating reserves of fossil fuels, a focus on energizing clean water supply and sanitation using zero emission technologies, is far more crucial to our survival as a species. Most countries of the world, in the present day, don't even have [drinking water supply, sewage treatment](#) and garbage disposal that [ancient civilizations reportedly had](#).

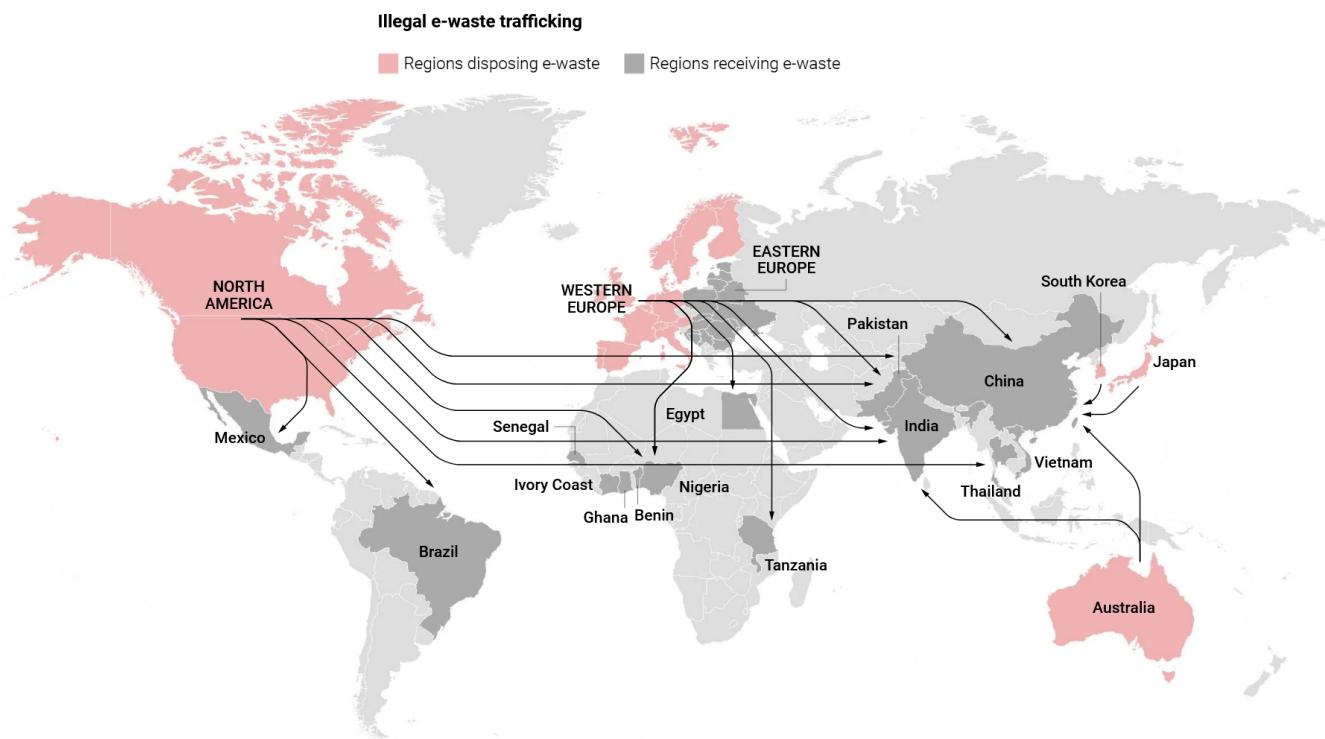

In the most modern civilization of the USA, the societal box is defined by separation of state (department of justice and civil services), church, wall street, and military. Keeping these organizations separate is very important because life would get even more problematic, if anyone were to declare themselves a supreme judge-pope-tycoon-warrior. Of course, that is exactly what Trump tried to do and exposed the fact that such fundamentally necessary separation of powers was always a deliberately deceitful illusion.

You see, the aim of any industrialized utilitarian society is to always work towards achieving [the discreet charm of the bourgeoisie](#). This is done by having all ruling class members of society somehow arrive at one dinner table, ever so often, to then rule over all dinner table conversations of every conceivable social class. The overall work for "leaders" is to then, parasitically govern the subservient class of people who will never come to own a dinner table. This is mainly achieved through the promotion, development, and sales of psychological weaponry in the form of stories, for propagating class warfare.

This is how master and slave relationships within a culture of global dominance, is naturally underpinned by a global supply chain of goods and services to prop up the stories of free market, trickle-down economics. A deluge of pollution trickles down from the bourgeoisie to the "bottom of the pyramid" before any so-called benefit does. And any meager bread crumbs that do reach [the third estate](#), get washed away in that deluge of trash and toxic waste.

Where does toxic waste end up?

Electronic waste is the world's fastest growing form of toxic waste and one of the main sources of lead exposure in poor regions. Around 80 per cent of e-waste is shipped, often illegally, from wealthy countries to low- and middle-income countries where workers in informal recycling industries, including children, are exposed.

"Origin and destination of toxic e-waste (and cultural waste)." src: [SCMP](#).

The data regarding dumping waste on to "third world countries," coincides with [scrap metal based money laundering routes](#) that fuel wars led by Europe and the US.

For centuries, weapons and trash of all forms have been dumped onto the same set of destination countries from the same set of oppressive, imperialist and colonialist regimes. This guarantees the prevalence of subservience, due to inter-generational harm and ecological devastation, among the oppressed countries.

Additionally, the supply of vital Covid vaccine production from India, China, and Brazil to demanding countries, is in the exact opposite direction of the e-waste dumping scams. More notably, harmful automotive and petrochemical production processes, have been primarily carried out in "distant" oppressed countries for decades, while the global supply chain of cleaner goods and services get delivered to the Euro-American conglomerate of colonial forces. These global "free trade" routes form the means and ends of "trade wars."

Indeed, all of us who are alive today, have come to stand on the shoulders of giants, who in turn, have always stood on the backs of slaves, and servile soldiers.

Oxymorons

In all the countries I've visited or resided in, I've peddled some or the other type of "war" machine. And the sales pitch for those weaponry would be the same in each country. I would paint an illustration for the purchasers about the type of weaponry they could have in the future, and I would tell them to hire me to build those things for them.

Ruling class officials of all countries have always wanted the latest, and best way to [assert dominance over their citizens, residents, and neighbours](#). I have witnessed this first hand, time and again, except, in 2005 when I was trying to sell designs for a landmine detector, in the form of a small robotic, remote controlled vehicle, to the Indian Army. Similar efforts for clearing landmines have been made by many companies, for aiding each military and civilian community throughout the post World War II era world, using some type of complicated robotics. Methods have even included [training rats to detect landmines](#).

The group I was trying to convince to hire me back then to provide me with resources for my designs, took me to the mine fields to show me how they dealt with landmines. They brought a [water tanker](#) out to the known mine field, turned on the hose and washed away the topsoil exposing the landmines. Then a person went and picked one up carefully in a bomb disposal suit, and placed it on a cart to take it away for disposal. They showed me that my \$3,000 USD, sophisticated, outside the box idea, would be ridiculously slow and ineffective compared to their existing \$40 USD worth, crude, inside the box solution. For some countries, the latest is not always the best. So I asked them why they hadn't used their simple method to clear out all the landmines, strewn about in various parts of Southern India? They told me that the landmines kept the "Naxals" and tribals in check. The frightened villagers obeyed the military more easily and didn't spread their village to other parts of the forest, which had lucrative natural resources.

Manipulating local populations through fear, has been the main political tool for various governments and international bodies in playing shadow puppetry, using robots, dogs, rats and other multi-million dollar equipment. This play is orchestrated in the name of removing landmines, shrapnel, and other live ordinances from fields of East Europe, the Middle East, South and Southeast Asia, and various African countries. Though modern ground penetrating radar on satellites, and other forms of aerial reconnaissance technologies can pinpoint landmines, the process of removing and disposing them safely has continued to be very slow. Even with the water hose technique, the volume of landmass that needs to be combed for such dangerous bombs left over from various wars is enormous. This problem plagues many countries of the world except for Western Europe, and North America. The whole point of ever using those types of munitions was to intentionally leave them, to destabilize the well being of surviving local populations.

A number of such surviving populations in India are groups of poor and tribal people who inhabit various woodlands in Southern, and Central parts of the subcontinent. Many of them are branded Naxals, [Naxalites](#), or Maoists by the Indian government and urban communities. From my perspective this is mainly because those tribal people don't follow main-stream Hinduism or Islam. They have a Shamanism or Shintoism-like belief system concerning nature, vegetation and animals, much like many other aboriginal or

indigenous peoples all around the world. These tribes in India also claim the right to own and live on their sacred ancestral lands, without interference from the Indian government. They are tribal, they don't understand the concept of "the Indian government", and why it wants to collect "taxes" from them.

There are sufficiently many groups of violent fighters among these tribes who use guerrilla tactics, to establish their territory within the subcontinent's forests, and national reservations. Such groups have killed thousands of civilians and Indian military soldiers over the past three decades, as well as other groups of diverse indigenous inhabitants of those conflict zones. They have operations for kidnappings and murders to fund their weapons supply. They perform all the usual guerilla warfare tactics of similar groups in Cambodia, Myanmar, Venezuela, Columbia, Congo, Mali, etc. Many of these Naxal groups have a fascination with intense communist and Maoist literature from a bygone era of China. Even people in China most probably don't subscribe to that kind of communism anymore, especially not in Shanghai or Guangzhou. Somehow, India continues to do to these tribal people exactly the same things the British East India Company did to Indians. Seeing their situation made me walk away to the US, I expected that the latest and best methods of becoming "lord of war" would be much more appreciated over there. No, it's not warlord, it is lord, of, war. Lord of war doesn't just have a different ring to it, it also means something very different.

This is how the world goes around - weapons sales need tea, coffee, cocoa, cocaine, opium, tobacco, marijuana, alcohol, timber, fossil fuels, ores, minerals, ivory, art work, cattle, textiles, diamonds, human organs, sex trafficking, slave labour, and basically every conceivable combination of cash, gas, grass, and ass. Unsophisticated sales of these "contraband", involve improvised or outdated firearms, that would be more likely to accidentally discharge against the user. Whereas, sophisticated sales of the very same "free market commodities," involve rocket launchers and vehicles for terrestrial, maritime, aerial and space operations that will certainly kill millions of poor people, when deployed for effect. Unsophisticated groups - use underground tunnels and back alleyways to do hand-offs, barters and trades. Sophisticated parties - use shows and conventions in five star hotels or resorts, to do trade deals in the name of international cooperation. There isn't much of a difference in the motives and opportunities of weapons dealers, just a lot more flamboyance is involved in defiling the Earth, and its humble peoples, when the offenders involved are posh corporate and government entities.

When the order for weaponry includes things like JSF-35, the mode of payment isn't a check or a credit card. It's usually bonds, debentures, stocks, entire high rise buildings, condos, mansions, warehouses and other real estate items that are tossed around like casino chips. This is why the apartments and commercial floors of buildings in places like Toronto, keep shuffling hands between shell corporations. The real estate asset, or inventory, stays in its physical location, and the rights to its ownership, or to its exploitation, are exchanged as contracts. This is like a game of "hot potato," or what some people might have grown up calling, "passing the parcel." Eventually some unfortunate company gets stuck with the actual physical resource or real estate buildings after "settlement." This is how some public investors get the literal shaft - of owning dilapidated and abandoned buildings - handed to them via "prudential" funds like Freddie Mac.

However, the top class investors get the real goods in the form of entire skyscrapers, air ports, shipyards and other major infrastructure projects in pork cities like Hong Kong, Manila, Delhi, Milan, Amsterdam, Munich, Paris, Moscow, London, New York, Toronto, Chicago, Seattle, Vancouver, San Francisco, Tokyo, and Shanghai. Apart from these locations, the traditional offshore banking sites like Dubai, the Caribbean and Cayman Islands, and particularly the Seychelles, remain "evergreen." Simultaneously, the stock market value of weapons manufacturing corporations like Boeing, Northrop, Dassault, etc. and that of petrochemical companies like Dow and Halliburton, keep rising no matter how much devastation and pollution they propagate in the world.

Ya'see, it is in the interest of every [oil and petrochemical company](#) to keep weapons sales on the rise.

Have you ever wondered, how do adversarial groups in Afghanistan get weapons like rocket launchers or even bullets? There are no more munitions factories left in those kinds of places. They get it from the UN and NATO in the name of "training local friendly forces." The guns and armaments dumped in Afghanistan by US, France, England and Canada via the UN, were in exchange for hundreds of tons of pure Afghan opium. Euro-American trade of opium for centuries has been the dominant reason to keep out South American cocaine trade using "drug wars." When the supply of opium from Chinese suppliers ran out, they simply went to their cash cow - [Afghanistan](#) - that they could milk to death. This Afghan opium from the past decade mostly ended up in the streets of the US and in Canada, as pharmacy prescribed painkillers, leading to the current opium crisis in North America. This is why, the irony of Canadians using a [poppy flower as a commemorative symbol](#) to honor veterans and victims of wars, is excruciatingly painful, in the face of an opium crisis throughout North America that arose from slave labor in Afghan poppy plantations. And that slave labor for opium is still being driven by Canadian, British, and American soldiers!

Canada's role has always been to supply US led "Western Allies" with things like troops, secret service intelligence, and [Agent Orange](#) for every war since World War I. Canadian factories that produced nerve gases and incendiary munitions for America's wars in Korea, Vietnam, and Laos generated enough environmental damage in Canada, to pollute the entire water table in Southern Ontario. Generations of Ontarians will continue to die due to congenital issues and slow poisonous death from their tap water, for having unjustly killed civilians in places like South East Asia. Moreover, the majority of America's active nuclear missile launch sites and silos are hidden in plain sight, within Canada's borders because Canada and Canadians were always deemed expendable by the US, considering if anything were to ever go wrong with those nuclear warheads.

Indeed, all of humanity is entirely self destructive and suicidal! The proof is in the pudding, the landfill sized pudding of [plastics, and toxic petrochemical waste covering most of Earth's surface](#), including heaps of garbage floating on oceans and even covering the ocean floors. Sometimes the method of self destruction is faster through wars, and sometimes slower through pollution related diseases. But the end result is the same - a painfully meaningless death.

Simplified Diagram of Knowledge & Influence Flows - Defense

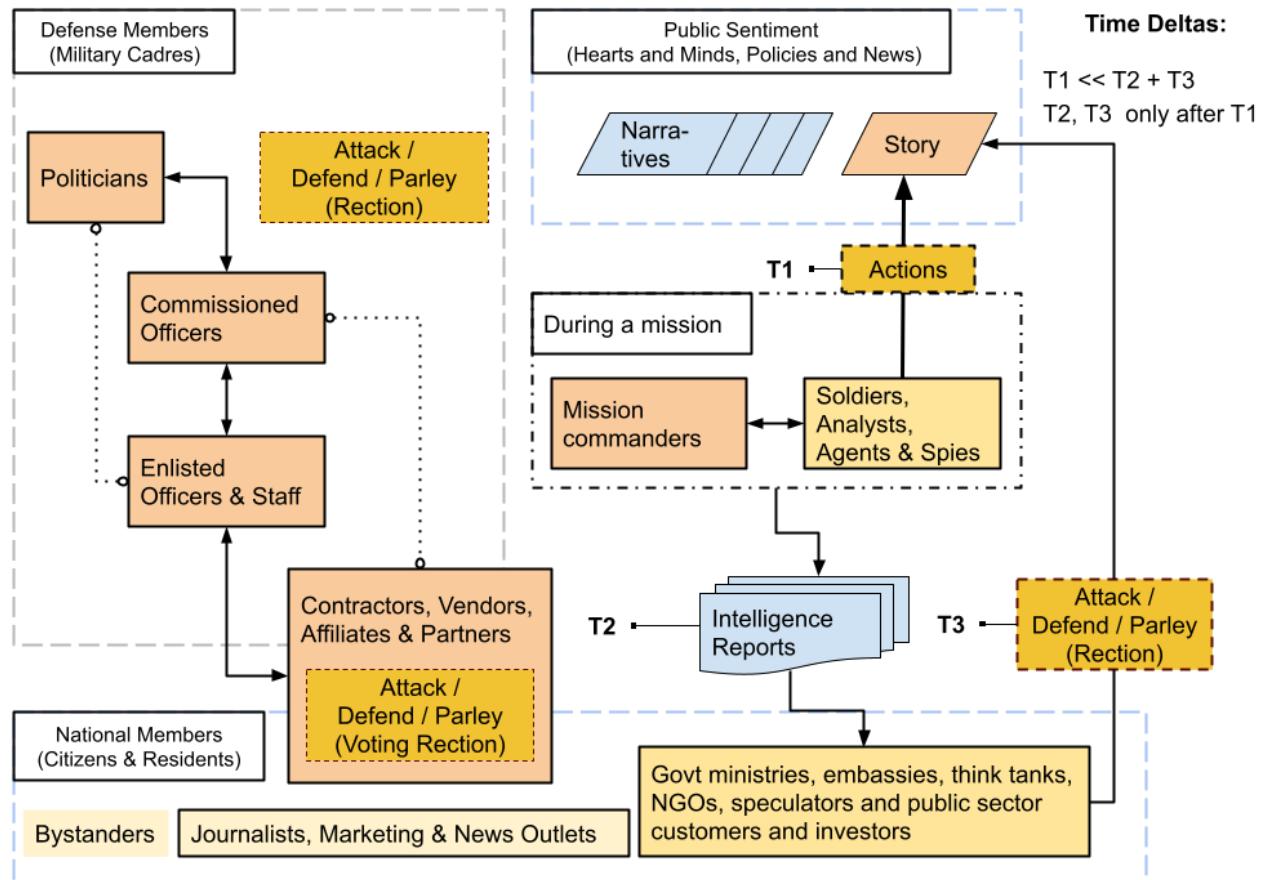

Figure Zero

Most significantly, Figure Zero demonstrates that all of such gargantuan issues concerning cascades of genocides, and ever increasing global pollution, are entirely outside the realm of courtrooms and "diplomatic negotiation conferences." The actions committed by military campaigns represented by time periods of T1 are extremely fast, they are within the time scale of minutes, hours or days. Whereas, the reactions of investigative journalists, political pundits, and diplomats who rely on intelligence reports and each other's posturing, is delayed by at least a gap of T2 time period. Their "reactions" are typically in the order of weeks and months due to the time delta of T2. Slowest reactions among all groups of people in society are represented by T3 in the diagram. These incorrigibly slow reactions are of organizations like the International Criminal Court at the Hague, which may publish their opinions ten to twenty years after blatant, and obvious war crimes have come to pass. The most tragic aspect of such delayed responses, decades after the dust of war crimes have settled, is that there aren't anymore people left from the massacred communities to receive any form of remedy. Worst of all, by then many more wars and war crimes march through the cities and countryside, of every other region in the world.

Much more importantly, every military leader already knows that any court can be overruled with sufficient fire power. And every negotiation can be made conducive to the puppet master, with a puppet regime at the other end of the conference table. In fact, every military strategist *knows* that negotiations don't need to

start, till the opposing groups beg for armistice. So within guaranteed perpetual wars, what remains to be understood, is, the war fighter.

War fighters

Among war fighters there are mainly those who fight as a vocation for a pecuniary benefit, for the spoils of war, glory, awards and medals, political gains, and for the ultimate power of being able to rewrite history. In rewriting history, they always come to hold their inglorious deeds of murder, rape, guile, deceit, and treachery in a more flattering, benevolent light, of being portrayed as a hero, or even as "the founding fathers of a nation." By the way, can you recollect any historical record of "founding mothers" of a nation?

However, more often than not, a professional soldier is merely someone who gets handed the short end of the stick in society, right after high school. And in getting recruited as a cog into a perpetual motion machine, lubricated by the blood of innocents, this poor individual gets stuck with responsibilities and chores of managing battle campaigns. Sometimes these [individuals rise up to the occasion](#) of winning great victories by skill, luck, or fate. But usually, for being hesitant and unprepared to take steadfast steps into a battle, such types of soldiers snared from super-market parking lots, get themselves and their subordinates killed very easily. Quite often, they end up getting killed by "friendly fire" during a seemingly routine mission out on a smoldering battlefield. And they are almost never from the Air Force. Seriously.

Then there are [other kinds of war fighters](#), ones who have nothing to lose and are to fight, no matter what they get labeled as. Their fight is for the last shred of dignity and humanity they have left as a cornered beast. As such, their ferocity and fervour is maniacal, frantic, and fanatic. Most politicians, and Rothschilds type people of the world are deeply frightened, terrorized and even petrified by such fighters. If these "do or die" kind of fighters manage to merely survive a day in battle, they become more energised to fight on the next day, even if they are completely depleted of resources. Their apparent abandon and lack of concern for self-preservation from having lost their homes and families, usually confounds and bewilders their enemies who still have a pension, home, or a family to go back to. These soldiers however, have nowhere to turn to. Perhaps by some grand miracle, if such reckless fighters win their war, they will most probably gain freedom to finally live a humble life of [placid](#) wants and needs. But sadly, no matter how many winning or losing battles they participate in, as long as they stay alive, they never leave "the battlefield." They simply have never known, and will never come to know, of anything other than being an active, combatant.

Lastly, there are beings who have nothing to lose and nothing to gain from feudal wars. These entities arise only once in a few millennia as a Goel. They aren't like the pathetic goel from the story of Boaz, who couldn't even figure out what to do for Ruth. These are Goels from Origin, who arise to avenge the Earth's blood. These are the ones who have come to purify the Earth with [fire](#), to rid the world of its parasitic imperialists, and predatory colonialists.

src: [Land of Black Gold](#)

Towards a Conclusion

Should you believe in stories you come across on the internet or anywhere else? As much as possible, no, you simply shouldn't pay credence to anything you ever encounter, including this sentence, your own thoughts and that of anyone else.

Most "*critically*," you should absolutely not believe in [science as dictum](#) because most of it is made up of model toys, for fooling around with, while trying to look busy and important. Many "scientific" theories are just like most religious mythologies. They exist to merely lull or pacify you while others who publicly espouse numerous ideals from their pulpits, do their dirty work against humanity in secret, behind a stolen veil of decency and prestige.

As human beings we get accustomed to stories that were drilled into us from birth. When we learn about their plot holes, contradictions, and inconsistencies among the concepts we were expected to hold inviolable, we encounter a choice. Should we simply ignore those flaws in our foundational precepts, or should we do something more substantial in reconstituting them. More often than not, the easier alternative is to simply gloss over all weirdness that would be glaringly obvious to any child. When children ask why and how questions pertaining to religion or science, the easier method available to adults for dealing with such a situation is to scold and abuse them, till every inquisitive bone within those poor souls gets shattered, and then pulverized.

So, growing up to become timid people who dare not question authority, especially on the subject of religion, social norms, and theoretical sciences, makes us accustomed to accepting facades and lies as adorning ornaments to our lives. We stop feeling uncomfortable with them, and instead sport them with

pride and honor. We display our contrived stories in the form of branded merchandise, as a badge of affiliation to the group that also subscribes to the same set of lies. It is not possible thereafter for any of us, to seek out a truth beyond the ones shoved down our throats, and up our anal sphincters, unless we become sufficiently unsettled and uncomfortable with such acts of manipulation, at a very deep and personal level.

It is thus guaranteed that any individual who wishes to seek knowledge directly from nature (Rabb or Kami), will get ostracized from the group that remains comfortable with its decadent facades, which is the same group that dons an air of superiority with its specious stories.

The "inferior" outcast, as a *Faqeer* or a *Bhikkhu*, will then have to directly gain knowledge from the actual place (*Gemba*, 現場) of all knowledge that guided and taught the teachers of all conceivable Earth bound teachers, which is the same source (*al Asal*, الأصل) that continues to guide, and teach the teachers of all conceivable, Earthly teachers.

For Philosophy Enthusiasts

You should especially not believe in silly ideas like the big bang because those conceptualizations are not *mathematical theories*, nor is the idea of [an expanding universe](#) a physical law. Consider this:

The currently observable universe could have emerged from countless little bangs, from within vast cosmic regions of "dark space." And those little bangs may have continued to occur throughout the ages at a sub-angstrom level, and even happen throughout the universe in current time. Such an idea or story about an undefined thing called dark space and little bangs, that are as vague as the big bang miracle, could also produce our galaxy's cosmological stage, with apparent "constant background radiation" viewable from bucket seats, pinned to planet Earth. That constant background radiation could even be due to total internal refraction of radio waves, within a galactic sized anisotropic, [ergodic](#) region of our universe. YEAH! For shizzle, my-nizzle.

So now, you just have to find a camp with enough desperate graduate students and associate professors, to buy into this senseless folklore, and start ginning up even more senseless papers about "symmetry breaking" little bangs that occur when quarks fly loose during photonic decay, of, whichever subatomic particles that you favor, and would like to popularise.

Also, very very importantly, and I mean, very very very importantly, these little bangs are conscious, and sooo intelligent, that when they observe themselves, they like, cause their own quantum wave function to collapse. And, then, uh... Yes! And then, they become a "string", or a "membrane" due to their intrinsic free will. These strings or membranes later exhibit particle-like physics, due to their "clumping" and "folding" nature, under the influence of "spatial" instead of "temporal" *relativism*.

Indeed, relative to the size of our galaxy we are definitely quantized, infinitesimal entities with a wave-function. In conjunction to that, we supposedly have free will and can observe ourselves. So,

do we cause an instantaneous manifestation of ourselves to arise, by our psychological determination to do so, through the mere act of observing ourselves?

By the way, all of the silly sounding words used in these paragraphs are genuine concepts from physical sciences. More often than not, theoretical physicists regurgitate exactly these kinds of ideas, after having a few pints of "flat," stale beer at standard room temperature, and one atmospheric pressure.

"Never drink more than two gargle blasters unless you are a thirty ton mega elephant, with bronchial pneumonia."

Here, the potshots were at the vagueness of what a "quantum system" does and how an "observer" by merely observing the system, "causes" decoherence of its quantum wave function. The idea of a system observing itself exposes the reality that for centuries, we have never come up with rigorous and easy to communicate definitions for concepts like "observation," "causality," and "self." The universe might even be "[foam-like](#)" at the quantum level instead of being "flat." This is how we keep pretending to do "science" with such concepts strewn about in so many of our workplace and casual conversations.

The reprieve from eternal ignorance, when calling ourselves "enlightened," is available through a [literature on information theory](#) from cybernetics. These papers define any "flux" of energy or substance as the process of observation, where that observation produces a "measurement," within a "recording medium." Defining a medium, and memory of a medium, then become the next challenge, that can be dealt with in later decades of our ever expanding, or contracting, universe.

Indeed, the universe could even be collapsing while portions of it called galaxies continue to shrink more rapidly than other intergalactic regions. This would cause an observer inside a galaxy to perceive that all galaxies are "receding" from each other, due to the influence of general relativity on the observer's frame of reference and vantage point.

The interpretation of the astronomical measurements confirming that galaxies are receding from each other, along with [measurements about the make of the universe](#), is taken as "proof" of the universe's expansion. However, a collapsing universe with more rapidly "[co-lapsing](#)" galaxies would also fit the same measurements as an explanation. It would also provide a new reason and consequence for "increasing density of [dark energy](#)" in the universe.

But, Seriously

Why bother talk about these unwieldy hair-brained ideas about astronomy here, in a discussion about the socio-technical underpinnings of warfare? And please, no jokes about - [Sirius Cybernetics Corporation!](#)

The main reasons for warfare and various other conflicts coincide with arguments about the present nature and origin of our universe, along with feistier arguments about its possible future. Whether it be religious edicts or scientific explorations, often purely fictitious notions and assumed stipulations, put forth by a clique for how something might be, are turned into an imposing "law" about how something is, has always been, and ought to be. This clique, after a few decades, turns into a cult starting with yearly conferences and "summer schools." And after many other forms of mutations [and persuasion] over "time immemorial" as a cloistered secret society, it turns into a multinational conglomerate that eventually gets designated as "a league of nations." Finally, after many more rounds of trial and error concerning its designs, it turns into a global empire, with its imperial agendas of colonizing the universe, by virtue of its "indisputably self-evident" precepts and postulates.

In this manner, each of us human beings become convicted by our idiosyncratic convictions, within an ocean of condemnation worthy societal conventions. How can we not be convicted by our convictions? There seems to be no other alternative.

Yes, indeed, the basis of all our lives are *stories*, which have the most vital and consequential role in expressing our daily wants, needs, goals, aspirations, and actions. A culture that gets its story wrong is likely to perish faster than a culture that has a more *resounding connection* with basic principles and truths for describing its reality. There might even be a singular truth and reality of our entire universe. It might even be an all essential absolute truth, about love, life and everything, such as 42. This truth may even require us to abide by it rigorously, for the sake of all humanity, as well as for the sake of each individual without leaving anyone behind, in our so-called pursuit of "a greater good." If such a truth exists, and in case anyone has managed to become fully cognizant of it, the story about it has yet to outshine all of the other singing and dancing shit in this universe. Which means, there is still lots of room for many more wars on Earth, in order to make one particular story of an existing culture the overarching reality, for all creation in the universe. Hallelujah, we're fucked!

Now, imagine if that particular story has to do with the very concept of humanity's evolution as a whole, rather than any single individual's path to salvation, redemption, transcendence, and whatever else that may sound like closure or finality. Consider a scenario of the universe and our reality where, "*all of humanity gets condemned by 'God' if even a single person is unworthy of heaven!*"

Imagine, if any of us so-called pristine and elite individuals were to become angry or dissatisfied by someone, or even so much as scoff at an "unworthy" human being, we would then become deplorable as well, within the gaze of such a 'God.' Can you then imagine the power each individual would have in such a scenario - to withhold justice, love, peace and all things good from all of humanity? Does such a possibility sound entirely irrational and impossible considering all the other religious and "scientific" stories you have come across during your lifetime? What could this 'God' possibly lose by condemning all of humanity to redo life, starting from primordial ooze within a respawned universe, just because of one "bad seed?" Could such a 'God,' graciously and mercifully, create infinitely many parallel worlds that respawn infinitely many times, till every element of humanity is blameless? Certainly 'God's godliness' would be capable of such a

[design of experiments](#), to achieve the most potent and worthy outcome from the basic act, of creating the principles and procedures, that have generated all of us mediocre humans.

As such, I have made my peace with the eventuality of this realm being genuine purgatory with no scope of escape from an illusory Earth. More importantly, if the foundational basis of our universe is absurdism then the most absurd thing to do in it, would be to try and explore it to find "meaning." Even settling on the meaning of nihilism for satisfaction or pacification wouldn't be too absurd! As it would nonetheless be inline with the basis of our fundamentally absurd universe. So am I an absurdist? No, I still believe in truths and axioms that transcend absurdism, to help prevent the need for absurdities, like mass murders.

Faced with all such options and possibilities I have happily given myself the chore of merely existing, and going with the flow where I can, while reshaping the flow, whenever I can.

It isn't necessary to be very powerful to shape the flow of humanity's future; with our individual prospects nested within that future, it is sufficient that whatever little power any of us do have, is applied as a spark to a "fuel" and "oxidizer" mixture, within a "box." And since I know that I can only generate lighting sized sparks, the appropriately sized box for my work is the cybernetic realm as a whole. How big is the entire cybernetic realm in reality? Symbolically, it is only as big as the dot, at the end of this sentence.

Conceptually, you can imagine it to be whatever you like, including the entire [multi]interwebs. So within this realm, as always, I will keep doing all that I can, to merely have a clean and healthy place to sustain my kind, against all odds.

Compared to mediocre fools, like me, the plethora of profoundly rational and logical magistrates, military generals, religious leaders, industry magnates, and political rulers of globalized society are the worst offenders against our planet who have brought it to ruins. They have made the odds of anyone's survival into the next century, in every context of human living, close to impossible. Can you conceive of a military or a government body that isn't addicted to fossil fuels and [consuming orphans](#)? And who keeps the mills running for those organizations to keep supplying fossil fuels and haplessly insecure overachievers?

It is almost every one of us on the planet who is to be held responsible. We keep that grinding mill churning, which supplies brainwashed soldiers and fossil fuels, through our consumerism, and through our notions of "gross domestic products" that continuously decrease the availability of unpolluted natural heritage.

Eventually, every company in this world directly or indirectly contributes to a perpetual world war, through one or the other "[business campaign](#)."

Globalization's true nature is that cold wars and trade wars are for passing time during cease fires, which soon enough turn into full-fledged wars. Worst of all, cyberwarfare makes each element of communication, in every physical medium throughout the world, a component of an active war zone. To this effect, various dastardly and conniving organizations like the US DoD, as well as its international counterparts in England and Europe, have stepped up their industrial efforts towards "global full-spectrum-domination" using unbound cybernetic warfare. This is why they are entirely disdain worthy and due to which, all the sarcasm,

contempt, and condescension that can be doled out to them through such crude, or refined documents, is still too little, and too ordinary compared to what they actually deserve.

All of us will invariably keep adding oil to the demise of the blazing world, because of being captive participants in globalized predatory capitalism, whose vile means and ends are derived from medieval colonialism. We will continue to do this through our daily actions or inactions, no matter how meaningful or absurd each of our lives might be.

We explored so many reasons for war:

- greed,
- lust,
- BLOOD lust,
- possessiveness,
- prejudice against the "weak and feeble,"
- extreme zeal to spread mythological or religious beliefs,
- irreconcilable philosophies about individual and collective rights,
- conceit and arrogance of being god or representative of God on Earth,
- generic political rivalry,
- age old mania for ethnic cleansing,
- gene editing and eugenics,
- monotonous designs for [making the world a better place](#) - through culturally homogenized [SOCIAL-LOCAL-MOBILE](#) corporations,
- and even [rising up against systematic oppression](#).

It is as if any reason including no reason is actually a legitimate premise for a war. But perhaps among all these reasons, the concept of vengeance is the most potent and ardent one.

Vengeance is not only a good enough reason to wage wars till every enemy is dead, it is a sufficiently powerful reason to keep coming back from the dead, to vanquish the enemy!

But if that were even possible, wouldn't each side then keep returning after dying to kill the other? Yes. That is why we are stuck in a [realm of perpetual wars with no escape](#), and no <genuine> scope for negotiations, diplomacy, or world peace. As long as any country pursues global full-spectrum-domination, like the USA and its allies, the entire world will remain at risk of gruesome annihilation.

So, in warfare, all of you who came from ashes or dust, are to return to ash and dust, in lonesome despair. And all of us who came from nothing, are to return to nothingness that is not even ash, nor dust, in peaceful contentment.

How To Parse This Document

If you used the table of contents and skipped to this section first, without reading the meandering rant, then congratulations, you are much smarter than you may care to admit to your peers. It's OK to be smart and lucky, for real, fam!

Here is a link to [the audio narration of this mind bending work](#). This has been quite a piece of intentional hard work, and that is why the narration is in many consecutive pieces. Download all the files and the playlists to listen to them, as you read along. Use a media player like [Amarok](#), or [VLC](#), to more easily manage the audio files and the playlists.

Do use a VPN to access the blocked links that may show up as a 503 error. Here is [a comparison of VPN services](#) to help you find a suitable one for yourself. A more careful method of protecting your privacy is to use an operating system with ephemeral storage like [Tails that has default Tor browsing](#).

VLC and Media Player on Windows might give you problems where they cut out the last second or two of each file. This is mostly because Windows on Intel is so bad that it can even give you negative time while doing precision calculations for scientific computing. Windows multicore management software can cause a data stream on one processor core to get tossed out or delayed compared to the processes handled on the other core. It does this "to save power" by making one or the other processor sleep even when the computer is plugged in, and not on battery saver mode.

The main unresolvable issue with Windows machines is that a later chunk of a data stream, or a code block, that needs to get processed synchronously, might be returned asynchronously by a processor before the earlier portion was supposed to be provided, by another processor that took time to wake up. Don't be like Windows, be like Mac or Linux, in appropriately deciding when to use sync or async.

Also, replace your Windows filesystem and kernel with a distro you like, using [Windows Subsystem for Linux](#). This will also hopefully patch the many backdoors in Windows, but not all the backdoors in Intel and AMD instruction set architectures.

For Analysts Only

Skip the rest of this section if you are not a technically oriented person, or if you *definitely know* that you are:

1. not a "thoroughbred" intelligence officer,
2. nor a "thoroughly inbred" psycho-analyst.

You will need at least two computer screens and an AI engine to parse this document. This thing was written for people who can understand that a container can be called lambda, so that the containers can be arranged or solved by applying [lambda calculus](#). Remember, anything can be "encapsulated" so everything is a container. Also, vectors, vestibules, vehicles, and vessels are just synonyms for containers.

If you are an intelligence analyst and you fail to extract the key actionable content from this document, your boss will most certainly have you fired. Which means that much worse things will happen to you and your career in that aftermath. So,

1. On one of the screens, open this document in a browser and "zoom out."

2. Open this document's links in a separate screen or browser tab. Changing between tabs may become burdensome so preferably you should make use of dual screens. Try changing your perspective by using a projector screen with a regular computer monitor or a tablet. This thing will definitely not load properly on a mobile phone screen. Printing out this document can act as another screen but as much as possible, don't waste paper on this. Lots of paper might get wasted if this becomes part of some kind of court proceedings.

The more sophisticated way is to analyze this document while scraping its links with OpenAI, but never mind that if you don't already have a user account for OpenAI. Instead, simply create a table with the column labels:

- "Intel",
- "Valid fact or data based argument",
- "Conjecture or opinion",
- "Cheeky sidetracking distraction",
- "Outright lie",
- "Artsy or rhetorical",
- "Helpful for clarification",
- "Potentially has hidden message(s)",
- "Oh FML!"

Then sort each sentence, paragraph, or logical section of this production, including contents found via links provided in it, as a row into those columns. Next, have two or three members from different camps and cliques do the same to help you with your investigations. Don't just get your homies or best friend to boost your confirmation bias. Go talk to people in other, diverse areas of signal intelligence, so that each of your idiosyncrasies can be averaged out in the tabulated graph. Following that, stack or overlap each of your completed tables, one on top of the other. Finally, from that heap, obtaining the most observable high amplitude signals would be, and is pragmatically, the best you could have done to clear out "[the noise](#)".

3. Look for links that are **highlighted in yellow**. There are only four [or five] of them. They summarise this entire document's motivation, sentiment, purpose, and rationale.
4. There are links to memes and other remixed or original content that are **highlighted in cream**.

Similar to these ones but, not necessarily original, are links **highlighted in green with white text**. Click on them if you would like to, "take a small step or a giant leap off the cliff, into the deep end."

These are the things that will help you keep your job as an intelligence officer. The minimum image processing needed in analyzing them is to use a [sobel operator](#) for edge detection.

Remember, your failure is your boss' failure! So your entire section will certainly get thrown under the bus, by your "commander in [chive](#)." Try not to be a loser.

And as a psycho-analyst, you will burn out soon enough during this pandemic. So don't worry if you can't get anything useful from any of this art work or its links. Besides, you can just make shit up, any story about the profile of this work's author(s) will do. Who will ever manage to check the veracity of your diagnosis or claims anyways?

5. Do not click on the links **highlighted in red with white bold text!**

They are only for a particular FBI agent who has been stuck to my hip for a long time. She is immune to gore, every type of weird pornography, depiction of violence and every kind of scary or frightening thing. Except for wasps, and hornets. She somehow gets freaked out by those things, even by their images, drawings, paintings, and sounds. So those links are special gifts for that particular special agent. Why will she bother to click on them? If she didn't read this section first then she might have already done that. Boobietraps aren't guaranteed to work, you know.

More annoying than that misguided FBI agent was her homer-land security counterpart from Springfield, Illinois, with connections at Scotland Yard and GCHQ. He was and is still, a twatt, with a double-T on a bellend. Most probably it was a he but, if you are thinking that there is something here that doesn't quite add up, it's indeed because things about this twatt really did not add up.

A comm-trace in an effort [for binding up wounds](#) led me to a fifty mile radius near Normal and St. Peters, Illinois. There didn't seem to be anything there which meant that I had only reached a relay endpoint. But, even more strange was this twatt's MI5 designation and contacts with a US Field Marshal called "Barry." Why was somebody from MI5 instead of MI6 following me? A plausible explanation was that a group of busybodies were involved in a "Joint Operation." Or maybe, [the grey and dank ones](#) were conducting an off-the-books operation against a no one like me. A simpler explanation would be that I had unreliable intel on my adversaries.

Surely, the FBI has many well seasoned staff with great deal of experience in [dealing with inner city kids](#), and shouldn't be messed around with, right? They definitely won't tolerate any churlish behaviour from the usual suspects! Well, I'm definitely not a Saizer Koze. However, pondering why I can so boldly and freely joust with US Field Marshals from DEA, the ATF, FBI goons, and MI5 agents within the arena of cyberwarfare isn't important. The more important question is how would anyone even find out the kinds of personal details about an FBI agent, that include the agent's

phobias?

You see, numerous educated and well qualified agents in the FBI and other US secret services, including national security agencies, were fired by the Trump administration. This meant that many highly skilled patriots who gave their entire life's worth towards public good, became ineligible to receive their pension for reasons of being fired. Worse, their hard earned reputation was tarnished and dismissed, for political maneuvering right after the 2016 elections, as they were propped up to look like treasonous vigilantes. Those honorable individuals were replaced by brutish people with a preconceived notion of who needed to be, and needs to be snatched away, to be put into jails and detention centres, or be deported by ICE without due process. The philosophical differences in what America is and how its future needs to be shaped, has always created red and blue teams in every federal department and agency. However, with the completely misguided agendas of monitoring and security agencies currently in existence, the toxic environment within them has created even worse internal tensions between various departments, camps, groups, and teams.

So you need to be aware that the ones hunting your sorry blackhat ass for a hobby, are other, retired, individuals. You're basically terrible at your job in finding "the extra special radioactive message in this document", because you weren't trained by [The Void Team](#).

Stop, drop, and roll... into the void.

Parts of this document aren't just difficult to decode, they are impossible to crack because their one time password-key and cipher were exchanged more than twenty three years ago. Yes, you might have been in your middle, or high school grade, back then. So now what will you do?

Your bureau chief in the State Department is going to have you thrown under the bus and ground into pesto, for sure! So don't be a loser like the [Red Team](#)!

If however, you were in your mid forties back then and are now a doctorate holder with a deep voice and a heavy mustache, even if you are female, then here is something more relevant for you. In the 1960s and 70s, and all the way to the 90s, there were certain noble-men who would roam around wearing brightly colored Hawaiian shirts while on R&R in Thailand and Hong Kong, to distinguish themselves easily and to advertise their commissioned roles, in various hardy groups. Somewhere around the mid 2010s other "independent groups" also started sporting [this exquisitely stylish look](#). This made things quite muddled and muddied for anyone - from nobody to everyone. At this point it is impossible to recognize trained assailants well in advance, to prevent a major attack on local policing facilities and critical infrastructure. As ridiculously impossible as a dog swallowing its whole dog house, without even chewing on it!

So if you are wondering whose side am I on, I am on your side. This is indeed the case at hand

even though I had retired a while ago. However, because you have been following me so intensely, and for so long, I have now practically become your leader. Just like a [pilot fish](#).

You should know that I am not a white whale. So you shouldn't be chasing after me like a Captain Ahab.

If you aren't sea borne, you might not know how lost sailors and pirates used to follow pilot fishes in hopes of finding land. Those poor lost souls weren't aware that the fish was aimlessly following their ship while swimming in front of it. That is how pilot fishes get their name, they keep surfing ahead of everyone else, like scouts or pilot probes. The positive feedback loop between the behaviour of the sailors, the fishes, and the ship, eventually leads each to where they needed to be. You will certainly hit pay dirt in due time, just that it will include a load of blood soaked dirt about your own agents.

There really isn't an easy way to say this, but, you see, rabid mice are vicious so all of their nests have to be smoked out and torn down. Doing that will be very difficult especially, at the top levels of management and leadership. So you should definitely talk to the Violet and Crimson teams, to first weed out the asshats from both Red and Blue teams.

No, not Sapphire or Ruby, and not Scarlet or Indigo. Violet and Crimson!

6. Indeed, this entire document is a trap but only for particular types of invasive and deeply offensive state sponsored blackhats.

So could the rest of y'all unsponsored blackhats and grayhats kindly go to the hidden-patreon via the hiddenWiki, or somewhere else using Tor [fragile-bridges](#). This way more busy bees can be nixed using this honey pot, if you can please get out of the way. Thank you.

For everyone else, this is just a long winded article about usual things that many more people online like to moan and crib about.

7. All other online links are either for a clarification about the linked concept through Wikipedia, or a trustworthy website, or they are included just for sarcasm, irony and witticism. Things on wikipedia can be ever-changing and contentious to say the least. And various links in this document may break at some point in time, or simply get blocked in your country. Hopefully the [permalinks](#) will work more correctly and as required.
8. Among the ironic, silly, and trippy links, if there is a reference to a tv show, book or a movie, go ahead and peruse through them. This can help you take a break, while you tell your boss that you are "studying" important reference material. Your boss doesn't care how you do your dull, dirty and dangerous job, as long as you do it in a way to make them look good with a worthwhile outcome.

Your boss only knows that a "person of interest" should be correctly escalated to a "person of concern", and then to a "person of consequence."

The overall legal and security system is designed to be extremely lenient with you, when you incorrectly categorise or classify a person who should not have been poked, especially not a person who was unjustly placed under one of those three labels. This is the basic flaw and excessively skewed bias of any overall "national security system." It won't be repaired anytime soon, because practically every individual online is a person of interest, from the perspective of the exploitative corporation you are currently working for. And every person not online or off the grid is already a person of concern!

So all you have to do is, not "miss" as much as possible, compared to "correctly reject" a threat. Is there a threat of some sort in this document other than freaking out someone with a pre-existing phobia for wasps and hornets? That is for you to figure out.

- Read up on this article on signal detection theory -
https://en.wikipedia.org/wiki/Evaluation_of_binary_classifiers
 - The German version is much better and more comprehensive -
https://de.wikipedia.org/wiki/Beurteilung_eines_bin%C3%A4ren_Klassifikators#Sensitivit%C3%A4t_und_Falsch-negativ-Rate
9. If, as a native English speaker, you are struggling to analyze such a generic mixed media artwork, what makes you think that you or anyone like you has ever managed to, or will ever manage to, parse a communication in a language that is not in your native language, like - Arabic, Russian, Mandarin, Visual Arts, or Mathematics? Yes, math is a language. There are even more difficult languages and cultural nuances that are too often misclassified, such as those from Lithuanian or [Turkish](#).

If you find anything committed by me on Github, be sure to look at the comments within the history of each commit. Analyzing those as a non-native speaker, can only be left to mere chance, when *someone like you* has to decide on their meaning in constituting a threat vector or an ordinary comment. And an even more complicated task is to analyze a communication that was being broadcast for months, with ever evolving and changing parts, and which might have merely emphasized a particular set of keywords or symbols that were not used, in order to convey a critical message to a receiver.

The absence of a signal is also a signal, you know?

About what? And to whom?

[That's your problem, not mine.](#)

But, I'll give you a hint, there is no need to worry about mice when there are tigers abroad. And there is no need to worry about tigers abroad, when there are rabid plague carrying mice aboard.

10. Here is a heads up, if you know how to, "do your dance, and throw your hands in the air, like you don't care", then one particular link in this document will be entirely meaningful to you.

However, if you use a simplistic web crawler to go through the links of this composition, it will get lost. Now, off you fuck!

11. Let's dig in and dial it to eleven, shall we?

Given the options to choose between crazy or stupid, choose crazy. This is because a crazy person can get out of craziness or a crazy situation, using a crazy trick. But, a stupid person cannot get out of stupidity or a stupid situation, using a stupid jig.

Hopefully you are not too stupid to understand all of this.

By the way, did you notice any [fallacies](#) in this document? You did? Really? You don't say!

In that case, you may have also noticed the overbaked physicalist structuralism with particularly sarcastic overtones, and horrendously judgey undertones. But, have you found the "all important" detailed scenario within this document, about an impending nuclear weapons based disaster in Northeast America?

You haven't found it yet!? And you don't even have a clue about how to locate it?

Oh well, all of us are SOL then.

Or maybe keep reading further, and you will find it soon enough. You're not a quitter are you?

The punctuation style in this document is to steer the text to speech engines of Microsoft and Amazon. It also seems to help other text recognition software tokenize words more accurately. A deep, fake writer versus a deep-fake writer, don't just have a different ring to how the phrases sound, they also have a considerably different meaning. The former would be an amateur human, and the later would be a professional human.

I didn't get around to completing my designs for pamwamS for deep-fake speech, and pamwamV for deep-fake videos. But other people sitting in hawks', owls', falcons', and eagles' nests within and around Google offices, have gone ahead and made APIs for those kinds of things. For example, Youtube's

hallmark is real-time, audio and video manipulations at pulse and pixel level, to generate synthetic [recommended](#) content based on "user-agent profile and behavior."

How many amateur and professional humans do you suppose contributed to the making of this mixed-media art? Maybe one of the authors was [L](#), or [M](#), or maybe, it was a *lorem ipsum* generating [Q](#).

When you conduct a frequency analysis of this collaborative art work, be sure to also pay attention to infrequent or one-of-a-kind tokens, words, and phrases. Unique phrases and sentences will seem quite out of place, and with odd misspelled words. Those will most certainly lead you to a sentence or a paragraph that is very significant and important in deciphering this tome. The most phreakuently used words will give you a sentiment analysis or gist of this entire literature. However, because your analytical models were almost certainly trained only on promulgated assumptions and norms, from dominant Euro-American cultures, they are highly likely to miss out on references from South and Central America, Continental Asia, Africa, and Island nations of Atlantic and Pacific regions. So what?

Well, you'll be finding that out soon enough.

You may have noticed the awfully long sentences with [lots of commas](#). The style of run-on sentences with many interjections used in this document, typically causes a cognitive overload, by extending *anticipation* and *spillover*. Anticipation has to do with what the reader thinks will come next in the sentence or paragraph. And, wait! Were you anticipating something about spillover? Okay, spillover has to do with the cognitive resource still being utilized for understanding a previous part of the sentence or paragraph. These two concepts apply to visual perception of scenes and also to processing signals through other modalities of sensory organs.

The overloading and [overloaded](#) sentences used here, are just to make someone with poorly developed faculties in English comprehension, balk at reading this kind of literary work. The type of phrases and concepts used in this style of writing can be misinterpreted and misunderstood easily, by readers who aren't accustomed to critiquing mixed-media art. This means that, when this document gets flagged and is sent to an analyst, the poor schmuck will most probably scoff at it for being a shitpost, and immediately toss it aside. But the automated system will keep bumping this article up for all of its "objectionable content." The number of red flags in here, from the perspective of Victorian puritanical imperialists, are just too many to count. Anyways, that is when a more keen set of eyes, and skilled set of hands, [with sharp tacs like a sharp tac](#), will be employed to work on this tacky *jigsaw puzzle*.

If that keen and skilled person(s) is(are) *finally* you, then, you will need to look for the deeply disconcerting and alarming [intel in here](#). They are buried within a heap of true stories, lies, and **tons of garbage**.

It is indeed easier to catch flies with honey. But, as my aim is to catch fleas and dung beetles from your agency, this entire file was prepared with boat loads of horse-shit!

As a colonialist, do you see yourself in this image?

You should, because almost every human's life on this planet has already turned into
the scene shown in this photograph because of colonialists like you :'(

One very important goal of this document is to highlight how wrong "experts" can be, in parsing and psycho-analyzing a piece of text or conversation. Often, when people use a sentence with words that distance themselves from the topic of discussion, they might simply be using content prepared for them by a speech writer, coach or a lawyer. In many cases, a sentence with numerous ifs, buts and conjugates, is a legalese code block, instead of a conversational gesture. The truth value and reliability of the content in communication, involving code blocks, is extremely difficult to validate or invalidate. Popular stories and folklore about psychoanalysis used in computational linguistics and psychology classes, are only to entertain undergrad students. They are not to be relied on by field agents. Additionally, views about "[lie detection](#)" from those kinds of undergrad stories aren't actually worthwhile in a court of law, when placed under scrutiny. Unless, the judge is a chump in a chum-bucket, or happens to be a very close chum of yours.

The worst aspect of ill trained analysts is that they inject their own superstitions into the analysis of someone else's behaviour. They are not trained on appropriate techniques in ethnography. They are instead trained via their explicit orders and tacit organizational culture, to paint someone who is "rocking the boat", as a dangerous mentally disordered or diseased person, with highly incongruous superstitious beliefs

in either numerology, voodoo, medieval mystery based occultism, shamanism, or kabbalistic "spiritualism." This way the person can be conveniently sidelined or "taken off the streets", and shoved into an institution to be subject to stealthy, punitive medical malpractices.

The notion of incongruousness in almost all of these cases is of course determined using Euro-American victorianism. That is the first and foundational flaw of "the system" - to completely ignore the diverse cultural worldviews formed by the rest of the six billion people on the planet. The next egregious issue is that most artists', scientists' and mathematicians' behaviours are categorized as "too eccentric, esoteric, or eclectic", particularly in the case of women. This method of ostracising women from mainstream endeavors for scientific exploration and discovery, is aimed at brideling women and womanhood. Its main objective is to force each of us women and persons of color, "back into the service of the master's kitchen, where we belong."

By the way, as a male cis gendered straight individual who is the sole composer of this work, we can let you know that we do not find any number, shape, color or a signal of any particular amplitude or mode, as "fortuitous." We do not subscribe to any views about special symbols with mystic powers, nor do we repose faith in a god that has any anthropomorphic form. And we can whole heartedly say, "fuck mormonism!" Hey, we have our own flaws, misconceptions and prejudices but, by no means can we support the userpations of indegenous and First Nations people through [fuck-all bullshit like mormonism](#), that has always been vehamently against the concept of emancipation in general, as well as the equality of rights for all gender identities, in particular.

The use of slurs, lack of censorship and apparent derogatory tone against particular topics or groups is merely for emphasis and to juxtapose "the profane" with "the all important." This commensurability is already innate to our universe and prevails throughout all of its parts. The highly colourful expressions in this anthology aren't a personal tool for promoting hate against anyone, or any group of persons. They are to increase the sharpness of criticism against certain topics and concepts prevalent in contemporary society that have made us impervious, to the sustained abuse, committed by exploitative regimes.

It is plainly observable that the largest section of the world's population is stuck in a rut, of being leached by "crusaders of globalization and free markets", while being blamed for burdening the global economy as "freeloaders" within the vast global empires of those "heavenly" crusaders.

So, the targeted comments within this prodigious art-work are not to be taken personally by anyone, except for those who like to call themselves white aryans or "royalty."

Furthermore, within our medium of free-expression, we tend to change our gender and personal pronouns, just to fuck with your stupid notions of lie detection and natural language processing. Yes, that is the mother freaking *royal we* in the previous sentence [though, we'll ne'er be royals](#). However, the number of people who have contributed to the design and (mis)shaping of this composition is incalculable.

Continuing on the lines of how the language used here is designed for particular purposes, the use of sentences with gerund form, multiple changes in voice, tense and tone, and enumeration of things is to create a cacophonic background, for the few **harmonious** sections that are important. The jarring staccato and cacophony employed here can be filtered out, using suitable algorithms, or just a bit of mental gymnastics.

The other reason for utilizing this superfluous technique of super-fluidity is as follows -

though terrorising people is entirely immoral, and trolling is fairly unethical, stupefying belligerent and bigotted "security and law-enforcement agents" is the minimum corrective action that needs to be taken, for mending "the system", by each online citizen of our cybernetic world(s).

The core sentiment of such a rationale in cyberwarfare defense is expressed in this humorous video - [Funny and Scary](#).

So did we (not the royal we), [quasimodo](#) this shit yet?

Did we drill in enough keywords, hints, allusions, alliterations, references, tropes, memes, motifs, satires, symbolisms, slang, code-phrases, links, jargons, [paradoxes](#), and jive to gum up your foray into our world with computer based malicious war machines?

Maybe we are not quite there yet. Maybe you still need *the distinguishing factor*, of the "real" motivation and purpose concerning this large-scale outpouring of bumbling-pineapple-like words.

The main theme and subthemes of this (re)production were definitely not concerned with a [makeup tutorial](#), or [were they](#)? But even among seemingly tenuous, superfluous and extremely tangential links, the overall message here is that all of us need to refocus our attention, on sustainably resolving systemic issues of bigotry that have continuously led to tragic [fallouts](#), on a daily basis in every society throughout the world. Attempting to discredit or disgrace me and those associated with me in any manner, to subvert this message, will be futile. By now it should be evident to all readers that this online post is not written in the form of apologetics, but more so in [the form of a taunt](#), in hope for systemic changes among negligent local governments, towards a sustainable global ecology, free from all forms of pollution and warfare. Free as in, free for all denizens of Earth.

For any individual or group who may like to label me as a conspirator, perpetrator, pretender, poser, or [an imposter](#), I would very much like to learn what such people suppose I have conspired or perpetrated, what am I posing as, or how exactly do I appear to be an imposter. To send your views across to me, merely create a video reply and make it go viral on the interwebs, or [reply to this meaningless reddit post](#).

Is this some avant-garde artform, or is it a script for a [spaghetti western](#)? Who knows?

However, the grunge and gritty style of presenting this article's messages using subliminal, liminal and supraliminal techniques, is for the cyberpunks out there who will better understand it in this form. This sentiment is perhaps much better conveyed by this "confusing", and perhaps to some, a rather "vulgar" music video by MGMT - [Time To Pretend](#).

But, seriously, was there really any genuine point to this mashup of a genre-bending "work in progress"?

Yes, many of its saliently poignant points were already reiterated. But, [perhaps](#), the most important one was to communicate a green colored rightward arrow in a circle, to nobody.

What green colored arrow in a circle? There was only a purple coloured one.

Correct, you will need to look at this document in [dark as well as light mode](#), and view inverted images using image processing or a custom CSS tag like the below one.

```
img {  
filter:invert(96%);  
}
